Culturally, institutional care has been seen to strip older people of their status as full adult members of society and turn them into 'have nots' in terms of agency. The substantial emphasis in gerontology of measuring older people's activity and functional ability has unintentionally fostered these stereotypes, as have traditional definitions of agency that emphasise individuals' choices and capacities. The aim of this paper is to discover what kind of opportunities to feel agentic exist for people who have reduced functional abilities and therefore reside in assisted living. In this paper, agency is approached empirically from the viewpoint of Finnish sheltered housing residents. The data were gathered using participant observation and thematic interviews. This study suggests that even people with substantial declines in their functional abilities may feel more or less agentic depending on their functional and material surroundings and the support they receive from the staff, relatives and other residents. The perception that residents’ agency in assisted living cannot be reduced to measurable activity has methodological implications for gerontological research on agency. (RH)

Loneliness is a significant health risk for older people, that is linked with bereavement, living alone and declining health. Previous research suggests loneliness is common amongst residents of English retirement housing, who show a relatively high incidence of these factors. This invites the question, what can providers of retirement housing do to help their residents avoid loneliness, thus remaining healthier and less likely to need care services? The authors use a survey of 326 retirement-estate managers to investigate the role of staff and residents' groups in developing organised social activities for residents in retirement housing, and the potential of these activities for generating social contacts which may provide a pathway to avoid loneliness. The survey was informed by a literature review with two objectives. The first was to consider the nature and causes of loneliness amongst older people and how these apply to retirement housing residents. The second was to identify good practice models of previous interventions designed to widen social interactions for older people or provide emotional support. The sample was drawn from the all-England property portfolio of a major provider of retirement housing for people over 55. The sampled estates, mostly social rented but including some with a mixture of leasehold and rented dwellings, represent a sector also described as sheltered or supported housing, which has over 550,000 dwellings in the United Kingdom. It is characterised by having some form of staff support for people who are frail, immobile or isolated, such that they may occasionally need help available on call. In the literature review, the authors consider how different kinds of social contact can help develop friendships and meet social support needs, in retirement housing and elsewhere - in particular, organised group activities (clubs, classes, etc.) and specific interventions designed to address loneliness. The fieldwork suggests that organised activities in retirement housing have considerable potential to meet residents' social support needs, but that this potential is often not fully realised. A wider range of activities is needed, which may require the support of housing management staff, volunteers and community organisations. (RH)

Extra-care housing (ECH) is a new housing model in Sweden, falling between ordinary homes and sheltered housing. The perception of safety among residents living in ECH was explored using in-depth interviews with 28 older people (mean age 83). A qualitative thematic analysis resulted in a model of perceived safety in the housing environment consisting of four themes: being able to manage on my own; a safe social context; being able to stay; and protection and safety. The model can be used for information, planning and development of ECH in general. (RH)

Enjoying the third age!: Discourse, identity and liminality in extra-care communities; by Karen West, Rachel Shaw, Barbara Hagger, Carol Holland.: Cambridge University Press, October 2017, pp 1874-1897.

Ageing and Society, vol 37, no 9, October 2017, pp 1874-1897.

Extra-care housing has been an important and growing element of housing and care for older people in the United Kingdom since the 1990s. Previous studies have examined specific features and programmes within extra-care locations, but few have studied how residents negotiate social life and identity. Those that have, have noted that while extra care brings many health-related and social benefits, extra-care communities can also be difficult affective terrain. Given that many residents are now ‘ageing in place’ in extra care, it is timely to revisit these questions of identity and affect. The authors draw on the qualitative element of a three-year, mixed-method study of 14 extra-care villages and schemes run by the ExtraCare Charitable Trust. They follow M W Aleman in regarding residents’ ambivalent accounts of life in ExtraCare as important windows on the way in which liminal residents negotiate the dialectics of dependence and independence. However, they suggest that the dialectic of interest here is that of the third and fourth age, as described by Chris Gilleard and Paul Higgs in 2010. The authors set that dialectic within a post-structuralist / Lacanian framework, in order to examine the different modes of enjoyment that liminal residents procure in ExtraCare’s third age public spaces and ideals. The authors suggest that residents’ complaints can be read in three ways: as statements about altered material conditions; as inter-subjective bolstering of group identity; and as fantasmatic support for liminal identities. Finally, the authors examine the implications that this latter psycho-social reading of residents’ complaints has for enhancing and supporting residents’ well-being. (RH)

Health and social care settings worldwide need to sustainably improve the quality of relationships across communities or ‘whole systems’. This study informed the development of a relational framework based on stakeholder perspectives. It was grounded in an action research project with practitioners, and drew on a previous literature review to present the underpinning elements of quality relationships as statements, organised under the headings of integrity, respect, fairness, compassion and trust. Using Q methodology, 27 participants, comprising a range of stakeholders (staff, residents, family and service providers), rank-ordered 48 statements based on perceptions of the importance of differing aspects of relationships. By-person factor analysis was used to create five factors or viewpoints by comparing and contrasting using the composite rankings alongside interview data collected for each participant. The first view ‘Altogether now’ prioritised compassionate engagement. Second, ‘Respect is a two-way street’ emphasised the need for reciprocal respect and recognition of history. The factor labelled ‘Free spirits’ posited the dominant view of freedom. The fourth view ‘Families _ strengths and challenges’ focused on the necessary and complex involvement of families and finally, ‘Helping hands’ emphasised the role of relationships in increasing previously low expectations of social integration for previously isolated residents. The different views that existed on the composition of quality relationships could be used to help extra care communities to understand and utilise relationships as a powerful and effective resource. The authors introduce a theoretical model for ageing-in-place housing specialists for those living in congregate housing facilities in the US. A “needs assessment” tool is outlined to help facilitate the successful implementation of a Health and Aging Residential Service Coordinator (HARSC), both from a research perspective and from implementation of a training curriculum for this particular population. A model that provides both on- and off-site services is hypothesised to be most effective. (RH)

Older UK sheltered housing tenants' perspectives of well-being and their usage of hospital services; by Glenda Cook, Cathy Bailey, Philip Hodgson (et al.).: Wiley, September 2017, pp 1644-1654.

Sheltered housing in the UK is a form of service-integrated housing for people, predominantly aged 60+. This study aimed to examine sheltered housing tenants' views of health and well-being, the strategies they adopted to support their well-being, and their use of health and social care services through a Health Needs Assessment. The study used a parallel, three-strand mixed method approach to encompass the tenants' perceptions of health and well-being (n = 96 participants), analysis of the service's health and well-being database, and analysis of emergency and elective hospital admissions (n = 978 tenant data sets for the period January to December 2012). Tenants' perceptions of well-being were seen to reinforce much of the previous work on the subject with strategies required to sustain social, community, physical, economic, environmental, leisure, emotional and spiritual dimensions. Of the tenants' self-reported chronic conditions, arthritis, heart conditions and breathing problems were identified as their most common health concerns. Hospital admission data indicated that 43% of the tenant population was admitted to hospital (886 admissions), with 53% emergency and 47% elective admissions. The potential cost of emergency as opposed to elective admissions was substantial. The mean length of stay for emergency admissions was 8.2 days (median 3.0 days), while elective hospital admission had a mean length of stay of 1.0 day (median 0.0 days). These results suggest the need for multi-professional health, social care and housing services interventions to facilitate sheltered housing tenants' aspirations, and to support their strategies to live well and independently in their own homes. Equally, there is a need to increase tenants' awareness of health conditions and their management, the importance of services which offer facilitation, resources and support, and the key role played by prevention and reablement. Transition from community dwelling to retirement village in older adults: cognitive functioning and psychological health outcomes; by Carol Holland, Alexis Boukouvalas, Stuart Wallis (et al.).: Cambridge University Press, August 2017, pp 1499-1526.

Ageing and Society, vol 37, no 7, August 2017, pp 1499-1526.

Supported living and retirement villages are becoming significant options for older adults with impairments, with independence concerns or for forward planning in older age, but evidence as to psychological benefits for residents is sparse. This study examined the hypothesis that the multi-component advantages of moving into a supported and physically and socially accessible 'extra-care' independent living environment will impact on psychological and functioning measures. The study was supported by the ExtraCare Charitable Trust as part of a longitudinal project. It used an observational longitudinal design, whereby 161 new residents were assessed initially and three months later, and compared with 33 older adults staying in their original homes. Initial group differences were apparent, but some reduced after three months. Residents showed improvement in depression, perceived health, aspects of cognitive function and reduced functional limitations, while controls showed increased functional limitations (worsening). Ability to recall specific autobiographical memories - known to be related to social problem solving, depression and functioning in social relationships - predicted change in communication limitations, and cognitive change predicted changes in recreational limitations. Change in
anxiety and memory predicted change in depression. Findings suggest that older adults with independent living concerns who move to an independent but supported environment can show significant benefits in psychological outcomes and reduction in perceived impact of health on functional limitations in a short period. Targets for focused rehabilitation are indicated, but findings also validate development of untargeted general supportive environments. (RH)

2016

Social isolation is a significant public health problem among many older adults. However, most of the empirical knowledge about isolation derives from community-based samples; and less attention has been given to isolation in older people's housing communities. This pilot study carried out in St Louis, Missouri tested two methods to identify socially isolated residents in low-income senior housing, and to compare findings about the extent of isolation from these two methods. The first method, self-report by residents, included 47 out of 135 residents who completed in-person interviews. To determine self-report isolation, residents completed the Lubben Social Network Scale 6 (LSNS-6). The second method involved a staff member who reported the extent of isolation on all 135 residents via an online survey. Results indicate that 26% of residents who were interviewed were deemed socially isolated by the LSNS-6. Staff members rated 12% of residents as having some or a lot of isolation. In comparing the two methods, staff members rated 2% of interviewed residents as having a lot of isolation. The combination of self-report and staff report could be more informative than just self-report alone, particularly when participation rates are low. However, researchers should be aware of the potential discrepancy between these two methods. (RH)

There is growing concern about isolation and its impact on older people's health and its cost implications for the NHS and social care. This report focuses on how loneliness in later life can be combated by creating more connected communities and better design of retirement housing. It draws on the results of two surveys: the first was an independent survey carried out in December 2015 by Voluntas of 2,422 McCarthy & Stone homeowners exploring life in McCarthy & Stone developments; the second was an omnibus survey of 2,059 members of the British general public by Populus Data Solutions in March 2016, which asked questions about socialising, loneliness and community spirit. The report explores the link between retirement housing and loneliness, and how retirement housing might tackle this by having shared facilities, communal space, activities, and provision of maintenance, as well as design considerations. More than a million older people in Great Britain always or often feeling lonely, with the highest levels of loneliness being reported in London and the North West, and the lowest in Yorkshire. Those aged 80+ are almost twice as likely to report feeling lonely compared to their younger counterparts. Those living in retirement housing tend to report feeling much less lonely than their peers in mainstream housing. (RH)

The environments in which people live contribute to their health. This evaluation of a new seniors assisted living facility in Alberta, Canada studied the role of the built environment on healthy ageing. An environmental design survey was used to examine resident satisfaction and place attachment as a way to increase awareness of person-environment fit. Surveyed residents reported high levels of satisfaction with the built environment, and satisfaction scores were positively correlated with measures of place attachment. The results of this evaluation increases our understanding of how the built environment affects older people in residential living facilities, and the value of measures examining person-environment fit. (RH)
Geographic migration among residents in seniors housing and care communities: evidence from the Residents Financial Survey; by Norma B Coe, April Yanyuan Wu.: Taylor and Francis, July-September 2016, pp 312-329. Journal of Housing for the Elderly, vol 30, no 3, July-September 2016, pp 312-329. On the whole, older people show relatively little inclination for geographical migration within the U.S. The authors were interested in the geographical migration patterns among a specific subset of older people that they know have moved out of the traditional family home _ those living in assisted living and independent living communities. They analysed data from the Residents Financial Survey (RFS, conducted in 2011), a survey of 2,617 residents in assisted living and independent living communities that asked about their previous living arrangement, where they lived before moving to their current community, and how their care needs were previously met. The authors find there is substantial migration among respondents. Using self-reported and community-reported location and zip code information, they calculated whether people moved across state lines and computed the distance people moved between their previous location and their current community. While the median distance moved is less than 10 miles, 20% moved across state lines, and 21% of the sample moved more than 100 miles; the average distance moved among the sample was 165 to 190 miles. The evolution of living arrangements shows that there are strong correlations between respondents' current living arrangements, previous living arrangements, and their plan to move in the future. Live-in care workers in sheltered housing for older adults in Israel: the new sheltered housing law; by Esther Iecovich.: Taylor and Francis, October-December 2016, pp 277-291. Journal of Aging and Social Policy, vol 28, no 4, October-December 2016, pp 277-291. Supportive housing schemes were historically aimed to provide group accommodation for older adults. With the ageing of residents, facilities were required to enable them to receive care services to allow them to age in place. Thus, different countries and different facilities developed different models of housing with care, reflecting cultural and policy diversities. Despite all of the different models, there are many commonalities among the supportive housing schemes across countries. These include provision of dwelling units and care services provided either by the facility or by external agencies. This article aims to: describe the historical development of the ever-evolving supportive care housing phenomena; point at variations in models of housing and care within the international context; and present a new Israeli model that enables residents to privately hire live-in care workers to meet their care needs. This is a unique model in the international context that has not been reported before. The article describes the main ideas of the new model and discusses the challenges that it raises, and pinpoints the unresolved issues associated with the presence of live-in care workers employed by residents of sheltered housing that should be addressed. Mental illness in assisted living: challenges for quality of life and care; by Leslie A Morgan, Rosa Perez, Ann Christine Frankowski (et al.).: Taylor and Francis, April-June 2016, pp 185-198. Journal of Housing for the Elderly, vol 30, no 2, April-June 2016, pp 185-198. An unknown number of mentally ill older people in the United States receive care in assisted living, along with people facing physical or cognitive challenges. While dementia is familiar in assisted living, the authors' data indicate that neither staff nor residents are prepared to work or live with the mentally ill. Challenges are created for professionals, since these residents bring diverse needs. Daily inter-resident interactions are also disrupted or stressful. Qualitative data describe the impacts on quality of resident life, as well as care and management dilemmas identified within five assisted-living settings with a varying presence of mental illness among residents. (RH) ISSN: 02763893 From: http://www.tandfonline.com

Quality of life for diverse older adults in assisted living: the centrality of control; by Sharon D Koehn, Atiya N Mahmood, Sarah Stott-Eveneshen.: Taylor and Francis, October-December 2016, pp 512-536. Journal of Gerontological Social Work, vol 59, nos 7-8, October-December 2016, pp 512-536. This pilot project asked, 'How do ethnically diverse older adult residents of assisted living (AL) facilities in British Columbia (BC) experience quality of life? And, what role, if any, do organisational and physical environmental features play in influencing how quality of life is experienced?' The study was conducted at three AL sites in BC: two ethnoculturally targeted and one non-targeted. Environmental audits at each site captured
descriptive data on policies, fees, rules, staffing, meals, activities, and the built environment of the AL building and neighbourhood. Using a framework that understands the quality of life of older adults to be contingent on their capability to pursue 5 conceptual attributes _ attachment, role, enjoyment, security and control _ the authors conducted 3 focus groups with residents (1 per site) and 6 interviews with staff (2 per site). Attributes were linked to the environmental features captured in the audits. All dimensions of the environment - especially organisational - influence tenants’ capability to attain the attributes of quality of life, most importantly control. Although many tenants accept the trade-off between increased safety and diminished control that accompanies a move into AL, more could be done to minimize that loss. Social workers can advocate for the necessary multi-sectoral changes. (RH)

Resident-managed elder intentional neighborhoods: do they promote social resources for older adults?; by Anne P Glass.: Taylor and Francis, October-December 2016, pp 554-571.
Social isolation has serious negative public health impacts for older adults. Survey data were collected at three resident-managed elder intentional neighbourhoods in the United States (n = 59), to determine if these neighbourhoods, each based on the co-housing model, promote development of social resources for their residents. Social resources were measured on three dimensions: social networks, neighbourly support, and satisfaction with the neighbourhood community. Respondents were White, mean age 73.3 (range = 63-91), primarily female (76.3%), and generally had high levels of education and self-reported health. Almost half (47%) were never married or divorced, and 37% were childless. Inclusion of neighbourhood ties ameliorated risk of social isolation. Satisfaction with support and a variety of neighbouring behaviours were reported. These neighbourhoods are meeting the needs of a potentially at-risk population as an avenue to promote social resources and to reduce social isolation. The implications for gerontological social workers include a role in helping to mobilise and support these types of neighbourhoods as a way to encourage mutual support among older adults. With the increase in the ageing population, such models of proactive interdependence and communal coping have the potential to lessen or delay the demands that socially isolated older people place on social workers. (RH)

Ageing and Society, vol 36, no 4, April 2016, pp 837-859.
This study explores how common spaces in assisted living schemes for older people are used by the residents. Common spaces are the major location for in-house social interaction on the units. Observation studies, group interviews with staff and individual interviews with residents, relatives, architects and key stakeholders in the context of Swedish elder-care were conducted. The results show a higher presence on the dementia units, compared to the somatic units. No significant correlation was found between the residents’ mobility limitations and their degree of presence in the common spaces. The results also suggest a contradiction between the staff’s intentions to provide a social context and the capabilities of the residents. Although common spaces are not used much between meals, the residents stress their importance for social interaction, suggesting that common spaces have important qualitative aspects, rather than quantitative. The results also show that few of the residents used the common spaces together with their relatives. The increasing use of assistive technology creates a shortage of space, suggesting a conflict between the efforts to create a home-like environment and the use of assistive technology. (RH)

Client safety in assisted living: perspectives from clients, personal support workers and administrative staff in Toronto, Canada; by Brittany Speller, Paul Stolee.: Wiley Blackwell, March 2015, pp 131-140.
Health and Social Care in the Community, vol 23, no 2, March 2015, pp 131-140.
Assisted living enables older people to receive care services specific to their needs while maintaining their independence and privacy. This study aimed to determine the gaps and strengths in care related to safety in assisted living facilities (ALFs) for older people. A qualitative descriptive research design was used to provide a comprehensive understanding of client safety from the perspectives of clients, administrative staff and personal
support workers. Interviews were conducted with 22 key informants from three ALFs in Toronto, Ontario throughout July 2012. All interviews were semi-structured, audio-recorded and transcribed verbatim. Initial deductive analysis used directed coding based on a prior literature review, followed by inductive analysis to determine themes. Three themes emerged relating to the safety of clients in ALFs: meaning of safety, a multi-faceted approach to providing safe care, and perceived areas of improvement. Sub-themes also emerged, including physical safety, multiple factors, working as a team, respecting clients’ independence, communication, and increased education and available resources. The study findings can contribute to the improvement and development of new processes to maintain and continually ensure safe care in ALFs. (Rh)

Correlates of attitudes toward personal aging in older assisted living residents; by Nan Sook Park, Yuri Jang, Beom S Lee ... (et al.).: Taylor and Francis, April 2015, pp 232-252.
This study explored factors contributing to older adults' self-perceptions about their own ageing in assisted living (AL) communities. Data analysis was completed based on interviews with 150 older residents from 17 AL communities in the United States. The study examined the effect of objective factors (health-related variables/negative life events) and subjective factors (satisfaction with facility/social support) on residents' attitudes toward personal ageing and assessed whether health perception mediated the relationship between health-related variables/negative life events and residents' attitudes toward personal ageing. Multiple regression analyses found that functional disability and hearing impairment negatively affected attitudes toward personal ageing among AL residents, and satisfaction with social support positively influenced attitudes. Health perception mediated attitudes toward personal ageing. Findings suggest the importance of social workers helping older AL residents recognise social support as a means of promoting their positive self-regard. (JL)

Extracare housing is seen as an innovative solution to meet both accommodation and care needs of increasing numbers of older people. This paper is based on a mixed method study exploring whether extracare is for 'fit' and 'frail' older people. In particular, the authors compare the satisfaction (financial, personal, social, environmental and access to personal services) of older people in extracare with those in residential care and older people in the community. In relation to the domains of financial satisfaction, residential care respondents reported lower satisfaction, fewer friends and lower social support than those in extracare and in the community, but older people in extracare were less satisfied with their access to personal social services. Additionally, although the care environment did not predict social satisfaction, from our qualitative interviews, it was found that, whereas more opportunities to socialise existed in extracare, there was little evidence of new developing friendships. These findings are important for social workers and social care professionals when assessing the needs of older people and exploring provision that can meet often complex needs in times of crisis and transition. Interpersonal relationships and subjective well-being among older adults in sheltered housing; by Daniel J Herbers, Louise Meijering.: Hipatia Press, July 2015, pp 14-44.
Research on Ageing and Social Policy, vol 3, no 1, July 2015, pp 14-44.
The authors examine how experiences with interpersonal relationships contribute to older adults’ well-being in the residential context of sheltered housing. They draw on data collected from sixteen in-depth interviews with older adults living in sheltered housing in a small town in northern Netherlands. Participants experienced the interaction with their children as of primary importance in their interpersonal relationships, while interactions with other residents were rather superficial. Their children offered emotional support as well as instrumental support and were found to play essential roles in participants' well-being. Moreover, participants expressed that the social and physical activities organised by the residential care facility offered them the opportunity to remain physically and mentally active. The help received from housekeepers and caregivers was found to be another important element of interpersonal relationships, and so too was the reciprocal nature of support exchanged with other sheltered housing residents. The authors conclude that the benefits of interpersonal relationships in sheltered housing should be considered when designing policy for the well-being of older adults ageing in place. (OFFPRINT.) (Rh)
Scandinavian contrasts and Norwegian variations in special housing for older people; by Svein Olav Daatland, Karin Hoyland, Berit Ottes.: Taylor and Francis, January-June 2015, pp 180-196.
De-institutionalisation is a general trend for Scandinavian long-term care over the last decades. Denmark and Sweden have taken this trend a step further than Norway has: Denmark suspended institutional care altogether in 1987, and Sweden in 1992. Since then, residential care has been provided to individuals in special housing in various forms. This housing is in principle "independent housing", where residents are tenants and are provided services according to needs and not sites. This article concentrates on the Norwegian variations to this system, as this is the only country of the three that still provides residential care under two "regimes": institutional care and assisted housing. Is assisted housing essentially different from institutional care, or is it better described as old wine in new bottles? The latter may be the case for Sweden, whereas Denmark stands out as having the most housing-oriented care model. Institutional care (i.e. nursing homes) still dominates in Norway, where assisted housing is merely a minor supplement to institutional care in most municipalities. This article explores the reasons for these trends and, in particular, the reasons for the Norwegian resistance to assisted housing as an alternative form of residential care. (RH)

Findings from this survey of residents living in retirement villages showed that village living can promote greater independence and provide greater choice in planning for later life than would otherwise be available. The communal environment has the potential to reduce social isolation, particularly for residents who move from more rural or remote homes. The average person in a retirement village experiences half the amount of loneliness (12.17%) than those in the community (22.83%); nearly two thirds of respondents living in retirement villages (64.2%) could be classified as not at all lonely, and over four out of five (81.7%) said they hardly ever or never felt isolated. Over half (54.7%) often felt in tune with those around them, and nearly four in five (79.1%) hardly ever or never felt left out. People living in this type of accommodation also reported a strong sense of control over their daily lives, nearly 10% higher than those living in the community. Control is a crucial component of quality of life measurement: respondents also felt secure in their homes, 97% of whom agreed that they felt safe where they lived. The research calls on the government to: identify ways of working with the private sector to stimulate the building of new good quality retirement housing; encourage people in early older age to consider making such a move; and, in the light of the new pensions freedoms, consider offering information and advice on such housing opportunities to people who make enquiries into how to manage their retirement finances. (NH/RH)

2014

The Commission on Residential Care: "a vision for care fit for the twenty-first century"; by Paul Burstow (chair), Commission on Residential Care; Demos. London: Demos, 2014, 271 pp.
The Commission on Residential Care was set up in July 2013 to explore the future of residential care in its broadest sense, from care homes to extra care villages and supported living, for older and disabled people. The Commission sets out a vision for housing with care in the twenty-first-century, and outlines how existing housing with care should change to deliver this vision. This final report from the Commission draws on a range of evidence: surveys, interviews and focus groups with experts, care staff, disabled and older people and members of the public; site visits; and two calls for evidence. Chapter 2 details individual stories to show how providing the right housing with care option can improve people's lives. Drawing on the findings from an extensive literature review and focus groups, Chapter 3 looks at what disabled and older people want from housing with care now, and how this might change in the future. Chapter 4 identifies key challenges to housing with care, which include: business models; staff recruitment, retention, training and wages; negative public perceptions of housing with care; confusion over terminology; pressures of demographic change; and increased expectations of the sector. Chapter 5 describes examples of housing with care that work to ensure people gain and maintain independence and autonomy. The last two chapters set out how the Commissioners believe the existing housing with care offer could change to deliver this vision across financial, operational, governance and

Ageing and Society, vol 34, no 8, September 2014, pp 1427-1451.

The promotion of choice and control for older people is a policy priority for social care services in the United Kingdom and is at the heart of recent drives to personalise services. Increasingly, we are seeing a move away from institutionalised care (e.g. in care homes) towards enablement, with more services being delivered in community-based settings. Extra care housing has been promoted as a purpose-built, community-based alternative to residential care for older people. However, whilst accounts of users' experiences in particular service types are plentiful, the use of different instrumentation and measures makes comparison between settings difficult. The authors combined data from four studies where participants were older people either living in care homes or extra care housing, or receiving care at home. All of these studies asked participants to rate their control over daily life, using the Adult Social Care Outcomes Toolkit (ASCOT). This paper presents the results of an ordinal logistic regression analysis indicating that, after controlling for differences in age, ability to perform activities of daily living (ADLs) and self-rated health, setting had a significant effect on older people's sense of control. Residents in care homes and extra care housing report similar levels of control over daily life, but consistently report feeling more in control than older people receiving care at home. Implications for policy and practice are discussed. (RH)

Perceived barriers to optimum nutrition among congregate (sheltered) housing residents in the USA; by Meena Mahadevan, Heather Hartwell, Charles Feldman, Emily Raines.: Sage, July 2014, pp 477-490.

Malnutrition, secondary to decreased food intake, is a public health problem of epidemic proportions among older adults in the United States of America (USA). Compared to community-dwelling senior citizens, congregate (sheltered) housing residents are found to be frailer, with documented deficiencies in several major and minor nutrients, and associated health complications. While studies have quantified these problems, translational research examining the perceived factors influencing their daily food habits is lacking. Using a qualitative approach, this study was undertaken to further and enhance understanding of this complex, under-researched area, and to form the basis for better nutritional management of this group. Participants (n = 46) were convenience sampled from four sheltered housing settings located in the suburbs of northern New Jersey, USA. Data were collected using a brief demographic questionnaire, and a focus group guide designed utilising constructs derived from socio-ecological theory. Content analysis of the transcripts identified several themes suggesting that a repertoire of individual, interpersonal, and organisational factors may serve as barriers to optimum nutritional health among residents. With an emphasis on utilising their perspectives to explain and interpret behaviour, the qualitative approach adopted offered a perfect vehicle for shifting the focus from measuring dietary outcomes to clarifying how participants arrive at the decisions they made. This study is a step forward in providing the empirical foundations necessary to design a comprehensive intervention with effective strategies to motivate and encourage sheltered housing residents to make healthier food choices and improve their overall health. (RH)

The rhythm of ageing amongst Chinese elders in sheltered housing; by Siew-Peng Lee.: Cambridge University Press, October 2014, pp 1505-1524.

Ageing and Society, vol 34, no 9, October 2014, pp 1505-1524.

This paper examines how some older Chinese tenants in a cluster of housing schemes in the north of England differed in their perception, consciousness and management of time. It examines how there was too much or too little time for some of these tenants, and how time played a part in their personal and social identification arising from their experiences of migration. Lefebvre's concept of rhythm analysis is intended to be a transdisciplinary theory that could be used to theorise 'everyday life'. The writer superimposes this concept on the activity and
disengagement theories of ageing to add meaning to the ethnographic data gathered, and argues that ageing is not a simple matter of activity or disengagement. These Chinese elders coped with change through a flexible and ongoing process of adapting to different rhythms of life. This paper aims to contribute to the empirical understanding of ageing for a minority in Britain, and to present a novel theoretical perspective on research approaches to ageing. (RH)

12-month incidence, prevalence, persistence, and treatment of mental disorders among individuals recently admitted to assisted living facilities in Maryland; by Quincy M Samus, Chiadi U Onyike, Deirdre Johnston ... (et al.). Cambridge University Press, May 2013, pp 721-731.
The present study aimed to estimate the 12-month incidence, prevalence and persistence of mental disorders among recently admitted assisted living (AL) residents and to describe the recognition and treatment of these disorders. 200 recently admitted AL residents in 21 randomly selected AL facilities in Maryland received comprehensive physician-based cognitive and neuropsychiatric evaluations at baseline and 12 months later. An expert consensus panel adjudicated psychiatric diagnoses (using DSM-IV-TR criteria) and completeness of workup and treatment. Incidence, prevalence and persistence were derived from the panel's assessment. Family and direct care staff recognition of mental disorders was also assessed. Results showed that at baseline three-quarters suffered from a cognitive disorder (56% dementia, 19% Cognitive Disorders Not Otherwise Specified) and 15% from an active non-cognitive mental disorder. Twelve-month incidence rates for dementia and non-cognitive psychiatric disorders were 17% and 3% respectively, and persistence rates were 89% and 41% respectively. Staff recognition rates for persistent dementias increased over the 12-month period but 25% of cases were still unrecognised at 12 months. Treatment was complete at 12 months for 71% of persistent dementia cases and 43% of persistent non-cognitive psychiatric disorder cases. The study concludes that individuals recently admitted to AL are at high risk for having or developing mental disorders and a high proportion of cases, both persistent and incident, go unrecognised or untreated. Routine dementia and psychiatric screening and reassessment should be considered a standard care practice. Further study is needed to determine the longitudinal impact of psychiatric care on resident outcomes and use of facility resources. (JL)

Influence of late life stressors on the decisions of older women to relocate into congregate senior housing; by Heidi H Ewen, Jasleen Chahal.: Taylor and Francis, October-December 2013, pp 392-408.
Journal of Housing for the Elderly, vol 27, no 4, October-December 2013, pp 392-408.
Late-life stressors often require individuals to make substantial alterations in behaviour and lifestyle, and can affect their overall health and well-being. Relocation is a significant life stress, regardless of age. The primary aim of this study is to elucidate the push-pull factors associated with moving into congregate senior housing. The secondary aim is to investigate the decision-making processes and stresses associated with moving into a congregate living environment. Interviews were conducted with 26 women who were new residents in congregate senior housing. As expected, relocation was considered to be stressful, although individual differences were found among perceptions of relocation stresses. Women who had made the decision to relocate on their own, showed evidence of better psychosocial well-being at the time of the move. One-quarter of the sample chose to move, to provide care to another person. As the options for senior housing continue to evolve and the number of adults reaching advanced age continues to increase, it is important to understand the factors that contribute to successful adaptation. This knowledge will enable facility administrators to implement programmes and procedures to assist incoming residents with getting used to their new homes. (RH)

The research explored the way in which different services, providers and other key players work together in housing with care (HWC) schemes and the impact of this on the quality of life of the older people living in them, especially those with high support needs. This was a qualitative study which included interviews with 47 residents and five relatives at 19 private and not-for-profit schemes across the UK and 52 professionals from provider, statutory and other relevant organisations. Most participants were very satisfied with the services in HWC but a third described problems linked to ‘boundary’ issues, where gaps, delays or confusion had arisen at
the interface between teams, organisations or professional groups. Gaps often occurred where tasks were relatively small: they affected the quality of life of older people with high support needs but did not necessarily outweigh the benefits of living in HWC. This study identifies ways of improving integrated working in HWC and beyond. The paper is relevant to those commissioning and providing services to older people and to all those with an interest in integrating care and housing. It is the first UK-wide, cross-sector study to focus specifically on the boundaries between roles and responsibilities and their impact on residents in HWC. (JL)

Predictors of nursing home placement from assisted living settings in Canada; by Colleen J Maxwell, Andrea Soo, David B Hogan (et al.). Cambridge University Press, December 2013, pp 333-348.
The authors sought to estimate the incidence of long-term care (LTC) placement, and to identify resident- and facility-level predictors of placement among older residents of designated assisted living (AL) facilities in Alberta, Canada. Included were 1,086 AL residents from 59 facilities. Research nurses completed interRAI-AL resident assessments and interviewed family caregivers and administrators. Predictors of placement were identified with multivariable Cox proportional hazards models. The cumulative incidence of LTC admission was 18.3% by 12 months. Significantly increased risk for placement was evident for older residents and those with poor social relationships, little involvement in activities, cognitive and/or functional impairment, health instability, recent falls and hospitalizations/emergency department visits, and severe bladder incontinence. Residents from larger facilities, with a Licensed Practice Nurse (LPN) and/or Registered Nurse (RN) on-site 24/7 and with an affiliated primary care physician, showed lower risk of placement. These findings highlight clinical and policy areas where targeted interventions may delay LTC admissions. (RH)

Social relationships of African American and Hispanic older assisted living residents: exploring the role of race and ethnicity; by Nan Sook Park, Debra Dobbs, Iraida V Carrion (et al.).: Taylor and Francis, October-December 2013, pp 369-391.
African American and Hispanic older adults are under-represented in assisted living communities, so little is known about how they experience social relationships in these settings. This study explored resident-to-resident and resident-to-staff relationships experienced and perceived by African American and Hispanic older residents in assisted living settings. In-depth interviews with 15 African American and 15 Hispanic older adults were conducted in seven assisted living communities in Central Florida. Three salient themes emerged using a grounded theory approach: formation of relationships: emotional vs instrumental support; language as a facilitator or barrier; and avoidance of inter-racial relationships. Implications for providing culturally competent services in assisted living communities with diverse populations are discussed. (RH)

What's in a name?: similarities and differences in international terms and meanings for older peoples' housing with services; by Anna L Howe, Andrew E Jones, Cheryl Tilse. Cambridge: Cambridge University Press, May 2013, pp 547-578.
Ageing and Society, vol 33, no 4, May 2013, pp 547-578.
The diversity of terms and meanings relating to housing with services for older people confounds systematic analysis, especially in international comparative research. This paper presents an analysis of over 90 terms identified in literature from the United Kingdom, the United States of America, Canada, Australia and New Zealand reporting types of housing with services under the umbrella of “service integrated housing” (SIH), defined as all forms of accommodation built specifically for older people in which the housing provider takes responsibility for delivery of one or more types of support and care services. A small number of generic terms covering housing for people in later life, home and community care, and institutional care are reviewed first to define the scope of SIH. Review of the remainder identifies different terms applied to similar types of SIH, similar terms applied to different types, and different terms that distinguish different types. Terms are grouped into those covering SIH focused on lifestyle and recreation, those offering only support services, and those offering care as well as support. Considerable commonality is found in underlying forms of SIH, and common themes emerge in discussion of drivers of growth and diversification, formal policies and programmes, and symbolic meanings. In establishing more commonality than difference, clarification of terminology advances policy debate, programme development, research and knowledge transfer within and between countries. (RH)

Biographies of speakers and their PowerPoint texts from the Conference which was held in London. Themes covered were: funding and investing; dementia in extra care; extra care and the housing slump; development and construction perspective of extra care; rolled up charges and other revenue funds; making the case for extra care; the viability of extra care accommodation under the Health and Social Care Act (Regulated Activities) Regulations 2010; telecare and extra care housing; and fire risks and older people. (RH)

The characteristics of residents in extra care housing and care homes in England; by Robin Darton, Theresia Baumker, Lisa Callaghan ... (et al).

Health and Social Care in the Community, vol 20, no 1, January 2012, pp 87-96.

Extra care housing has been viewed as a possible alternative or replacement for residential care. In 2003, the Department of Health announced capital funding to support the development of extra care housing, making funding conditional on participating in an evaluative study. This paper forms part of this evaluation. It presents findings on the characteristics of the residents, drawing on information collected on demographic characteristics and care needs for the residents at the time of moving into 19 schemes within six months of opening. The findings are compared to a 2005 survey of residents moving into care homes providing personal care. The findings show that overall the people who moved into extra care were younger and much less physically and cognitively impaired than those who moved into care homes, although a minority had similar levels of physical impairment. Overall levels of severe cognitive impairment were much lower in all schemes than the overall figure for residents of care homes, even among schemes designed specifically to provide for residents with dementia. The results suggest that, although extra care housing may be operating as an alternative to care homes for some individuals, it is mainly providing for a population who may be making a planned move rather than reacting to a crisis. (JL)

Choosing among residential options: results of a vignette experiment; by Francis G Caro, Christine Yee, Samantha Levien ... (et al).

Research on Aging, vol 34, no 1, January 2012, pp 3-33.

Older people who experience declining health are often faced with difficult decisions about possible residential relocation. The present study aimed to determine how five distinct dimensions - functional status, features of current housing, social networks, features of retirement communities and financial considerations - affect decisions to relocate to a retirement community. A vignette experiment with a factorial design was conducted involving both older people and adult children who were concerned with an ageing parent. Research participants were influenced by each of the dimensions. However functional status of the vignette participants had the greatest impact and financial considerations the least. Adult children were more likely to recommend moves than were older people themselves. The research is suggestive of the potential for use of vignette experiments for a fuller understanding of relocation decisions. (JL)

Deciding to move into extra care housing: residents' views; by Theresia Baumker, Lisa Callaghan, Robin Darton ... (et al).

Extra care housing aims to meet the housing, care and support needs of older people, while helping them to maintain their independence and privacy. This paper presents findings on factors motivating older people to move to extra care housing, their expectations of living in this new environment, and whether these differ for residents moving to the smaller schemes or larger retirement villages. In total, 949 people responded, 456 who had moved into the smaller schemes and 493 into the villages. Of the residents who moved into the villages most (75%) had not received a care assessment prior to moving in, and had no identified care need. There was evidence that residents with care needs were influenced as much by some of the attractions of their new living environment as those without care needs who moved to the retirement villages. The most important attractions of extra care housing for the vast majority of residents were: tenancy rights, flexible onsite care and support,
security offered by the scheme and accessible living arrangements. The results suggest that, overall, residents with care needs seemed to move proactively when independent living was proving difficult rather than when staying put was no longer an option. A resident's level of dependency did not necessarily influence the importance attached to various push and/or pull factors. This is a more positive portrayal of residents' reasons for moving to smaller schemes than in previous UK literature, although moves did also relate to residents' increasing health and mobility problems. As in other literature, the moves of village residents without care needs seemed to be planned ones mostly towards facilities and in anticipation of the need for care services in the future. Design for aging: international case studies of building and program; by Jeffrey Anderzhon, David Hughes, Stephen Judd (et al). Hoboken, NJ: John Wiley, 2012, 300 pp. A book which brings together 26 case studies of aged care environments from Australia, Japan, Sweden, Denmark, the Netherlands, the UK and the United States. The intention is to illustrate that the physical environment and the idea of belonging are integral to care that is offered, as much as the design of the buildings. The UK schemes are: Belong Atherton, Wigan, Greater Manchester; Heald Farm Court, Newton-le-Willows, Merseyside; Sandford Station, Winscombe, North Somerset; and The Brook, Coleraine, Northern Ireland. (RH) From: wiley.com

Does the design of extra-care housing meet the needs of the residents?: a focus group study; by Sarah Barnes, Judith Torrington, Robin Darton ... (et al). Ageing and Society, vol 32, part 7, October 2012, pp 1193-1214. The study objective was to explore the views of residents and relatives concerning the physical design of extra-care housing. Five focus groups were conducted with residents in four extra-care schemes in England. One focus group was carried out with relatives of residents from a fifth scheme. Schemes were purposively sampled to represent size, type, and resident tenure. Two over-arching themes emerged from the data: how the building supports the lifestyle and how the building design affects usability. Provision of activities and access to amenities were more restrictive for residents with disabilities. Independent living was compromised by building elements that did not take account of reduced physical ability. Other barriers to independence included poor kitchen design and problems doing laundry. Movement around the schemes was difficult and standards of space and storage provision were inadequate. The buildings were too hot, too brightly lit and poorly ventilated. Accessible external areas enabled residents to connect with the outside world. The study concludes that while the design of extra-care housing meets the needs of residents who are relatively fit and healthy, those with physical frailties and/or cognitive impairment can find the building restrictive resulting in marginalisation. (JL) ISSN: 0144686X From: http://www.journals.cambridge.org/aso

Extra care housing for people with sight loss: lighting and design; by Judith Torrington, Alan Lewis, Thomas Pocklington Trust; School of Architecture, University of Sheffield. London: Thomas Pocklington Trust, 2012, 6 pp (Research findings, no 36). This presentation presents findings from research about the design of extra care housing from the perspective of people with sight loss undertaken by Judith Torrington and Alan Lewis the School of Architecture, University of Sheffield. The study asked 44 people living in 11 extra care housing schemes about their experiences of the buildings they lived in, evaluated their homes, and reviewed data from a previous evaluation of 23 extra care housing schemes. The study produced a new tool for evaluating buildings, EVOLVE (Evaluation of Older People's Living Environments), itself the outcome of research funded by the Engineering and Physical Sciences Research Council (EPSRC). The tool comprises electronic checklists that, when completed, create a new profile of how well a building can support residents. The checklists are designed to be used in a walk-through of a housing scheme. The EVOLVE toolkit is available on the Housing LIN website (at http://www.housinglin.org.uk and search for EVOLVE). Supported housing for older people in the UK: an evidence review; by Jenny Pannell, Imogen Blood, Imogen Blood and Associates; Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation - JRF, December 2012, 4 pp (Inspiring social change; Ref: 2846). Around 5% of the older population live in specialist housing with support. Across the UK there are almost 18,000 developments and around 550,000 units (480,000 in England) of such housing, built and managed by not-for-profit and private providers, and providing a wide range of accommodation and levels of support. This
summary reports on a study which is part of JRF's Better Life programme. The study included a literature search examining more than 100 publications (mainly since 2000). Analysis of official statistics in two English datasets was commissioned from the New Policy Institute for CORE (Continuous Recording of Lettings and Sales in Social Housing in England), and from the Centre for Housing Research, University of St Andrews, for Supporting People monitoring. The study examines the evidence and gaps in it, to consider what sheltered and retirement housing offers in terms of quality of life for those with high support needs. It notes that researchers have paid more attention to "housing with care" which comprises only 10% of the total supported housing stock, while sheltered housing has been largely ignored. Recent and forthcoming changes to funding and benefits for older people's housing and support services need underpinning by robust evidence, particularly on owner-occupied retirement housing, and on the growing private rented market. Whose responsibility?: boundaries of roles and responsibilities in housing with care; by Imogen Blood, Jenny Pannell, Ian Caperman, Housing and Support Partnership; Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation - JRF, December 2012, 4 pp (Inspiring social change; Ref: 2842).

There is no single model of housing with care (HWC) for older people. A range of providers and other key players are involved in commissioning and delivering this hybrid of housing, care and support. In some schemes, there are multiple providers, each delivering different services. This is a summary of a qualitative study exploring the boundaries of roles and responsibilities in HWC, and how they impact on older residents' quality of life, particularly those with high support needs. The UK-wide study involved 20 schemes for rent and for sale, run by private and not-for-profit providers. The researchers interviewed 47 older tenants and leaseholders, 8 family carers, and 52 professionals, including providers, scheme staff, commissioners, regulators, and national organisations. The full report (same title) is available as a free PDF on the JRF website (www.jrf.org.uk). (RH)

2011

Architectural space as a moulding factor of care practices and resident privacy in assisted living; by Catharina Nord.

Ageing and Society, vol 31, part 6, August 2011, pp 934-952.

This article presents an analysis of privacy, care practices and architectural space in assisted living in Sweden. Observations and personal interviews with staff as well as residents were the major data collection methods. The analysis revealed the evasiveness of a private-public dichotomy; that is, how privacy appears in public spaces and how private spaces became public under certain conditions. During the course of a day, the residents' privacy was qualified and structured by caring activities that took place in various spaces and that associated with variable distance or closeness to the staff. The study shows that individualised care practices improved privacy for the resident. Furthermore staff used a number of spatial strategies to promote the residents' privacy where possible, eg. in the dining room at meal times or when residents were subject to intimate care in their private rooms. The residents had more control of access to their private rooms than control of their personal space in public areas. Staff supported the residents to lead a private life in the assisted living facility. (JL)

ISSN: 0144686X

From: http://www.journals.cambridge.org/aso

In this report the authors show how there is no single model of housing with care (HWC). Schemes vary enormously in size and scale, location, services and cost. They are run by private companies and not-for-profit housing associations and charities. Also there are significant variations in provision and policy context across the UK. Since residents' quality of life can be affected by the way in which these organisations work together, clarity over boundaries, roles and responsibilities is crucial. Among the main research questions the authors address are: What are the boundaries or fault lines of roles and responsibilities in HWC? What are the impacts on quality of life for older residents with or without high support needs? Can a rights-based approach to services empower residents? How is quality of life affected by different expectations between residents, family, staff, providers, commissioners and other stakeholders? (RH)

Aging & Mental Health, vol 15, no 8, November 2011, pp 1008-1017.
The Enriched Opportunities Programme (EOP) was a multi-level intervention focusing on improved quality of life for people with dementia. This study compared the experience of people living with dementia and other mental health problems in extra care housing schemes that utilised EOP with schemes that employed an active control intervention. Ten extra care housing schemes were cluster randomised to receive either the EOP intervention or an active control intervention for an 18-month period. Residents with dementia or other significant mental health problems were assessed on a number of outcome measures at baseline, six months, one year and 18 months. The primary outcome measure was quality of life. Self-reported depression was an important secondary outcome. The EOP-participating residents rated their quality of life more positively over time than the active control. There was also a significant group-time interaction for depressive symptoms. The EOP-participating residents reported a reduction of 25% at both six and 12 months and a 37% reduction at 18 months. EOP residents were less likely than residents in the active control sites to move to a care home or be admitted to a hospital inpatient bed. They were more likely to be seen by a range of community health professionals. Overall the EOP had a positive impact on the quality of life of people with dementia in well-staffed extra care housing schemes. (JL)

Housing markets and independence in old age: expanding the opportunities; by Michael Ball, Robert Blanchette, Anupani Nanda, Peter Wyatt, Henley Business School, University of Reading. Reading: Henley Business School, 2011, 45 pp.
This report outlines findings from research on housing for older people who live in specialist private retirement accommodation, called owner occupied retirement housing (OORH). This type of housing is purchased, on a leasehold basis, and found in specially designed blocks of apartments which have communal facilities, house managers and other networks of support integrated within them. There are currently around 105,000 OORH houses in the UK, about 2% of the total number of homes for those aged 65 and over. The report examines the potential demand for OORH, and providers and supply side constraints. Findings reveal a higher quality of life for residents and their families: 92% of OORH residents are very happy or contented; and most have family and friends in the locality, and the great majority would recommend the accommodation to others. OORH was environmentally better than traditional housing, with reduced energy use, including less travel; 51% of OORH residents said that their energy bills were noticeably less. The report concludes that policy on this type of requirement needs to be reassessed, since older people could benefit from this type of accommodation. However, due to restrictive planning and housing policies, many older people are not being provided with the opportunity to purchase OORH. (RH)

Housing or care workers?: who is supporting older people with high support needs?: by Jill Manthorpe, Jo Moriarty.
This article looks at the potential and cost effectiveness of extra care housing in England with a particular focus on older people with high support needs. The authors first detail what is meant by extra care housing, summarised as developments specially designed for older people offering self-contained accommodation alongside 24-hour care, and provided with a range of leisure activities and other shared facilities. The article then outlines what evidence is necessary to prove the benefits of such a housing model. Finally, the authors present a discussion on commissioning technology and telecare in these provisions, noting that such technology requires its own supporting workforce. (JL)

In search of a future for large-scale care homes in Flanders; by Koen Coomans, Henk de Smet, Ann Heylighen.
Housing for older people in Flanders is evolving toward small-scale facilities and better quality of life. Ageing population strains the means to achieve this to the limit. The authors investigate whether and how Flemish large-scale facilities can adapt to meet contemporary and future requirements of housing for older people. By analysing current tendencies, they depict what this housing should look like, both now and in the future. They then investigate how an existing large-scale care home could fit this picture by using design as a mode of knowledge production. They propose to redesign the site such that its actual evolution would be thoroughly
redirected. Beyond the facility at issue, the study shows how Flemish large-scale facilities could develop to keep playing a role in the future. They should timely adapt their size with qualities of small-scale housing schemes, and integrate in the neighbourhood. (JL)

2010

This article presents UK-based research that has studied the existing sheltered or assisted living housing population and its future housing options and preferences. This meets an identified need to know and understand users' needs and requirements in much more detail, that outlines what is liked and disliked by older people about sheltered housing, so that those who plan and design such housing can be aware of their views. The study also sought to understand the architects' challenges in designing and adapting this type of housing. The sheltered housing managed by housing associations in Belfast, Northern Ireland, was assessed through a series of site visits, structured interviews, and a focus group with stakeholders. Findings revealed older users' keen interest in participating in their housing needs assessment; identified building design concerns; and provided recommendations for potential design guidelines. (KJ/RH)

Extra care housing, which provides support and care for people in specially designed accommodations, has now been part of the range of housing and care services available to older people in England for several years. Currently, the United Kingdom evidence base tells us little about the financing, estimation of the costs, or burden to the public purse of housing with care. The United Kingdom has significant state welfare provision in the areas of health and social care. The objective of this in-depth case study was to investigate the cost and outcome consequences for a sample of people who moved into an extra care housing scheme in Bradford, England, and to reflect on the methodological implications for future research in this developing area. The main finding of the study was that the overall cost per person increased after a move to extra care housing, but that this increase was associated with improved social care outcomes and improvements in quality of life. EAC Housing for Older People Awards 2010: report: the development, implementation, consultation process and findings of the first retirement housing awards nominated by the residents; by Elderly Accommodation Counsel (EAC). London: Elderly Accommodation Counsel (EAC), 2010, 35 pp (+ DVD).
The EAC Housing for Older People Awards has come about as a result of initiatives such as the Lifetime Homes, Lifetime Neighbourhoods strategy. A second Awards event for 2011 is due to be held. This report describes an original method of collecting the views of a large number of residents on their well-being in all forms of retirement housing. It presents facts, figures and findings relating to the 260 schemes nominated, of which 203 were retirement housing and 57 housing with care, and with photographs of the various winning schemes. The DVD is a presentation of the awards event, also the EAC Art Awards. The report was sponsored by the Nationwide Building Society, other funders being the Department for Communities and Local Government (DCLG), Housing Learning and Improvement Network (Housing LIN), and Legal & General. EAC National Housing for Older People Awards 2011; by Elderly Accommodation Counsel (EAC). London: Elderly Accommodation Counsel (EAC), 2010, various (+ DVD).
The EAC Housing for Older People Awards has come about as a result of initiatives such as the Lifetime Homes, Lifetime Neighbourhoods strategy, with the aim of celebrating the best examples of housing schemes for older people. It is hoped the Awards will help shape the future of housing in later life. The first Awards event was held in 2010 and was successful in capturing over 2100 nominations. There is promotional material that is being distributed to encourage nominations for the 2011 Awards. Nominations will close on 31 October
Elder abuse in long-term care: types, patterns and risk factors; by Lori Post, Connie Page, Thomas Conner (et al).

The authors investigated types and patterns of elder abuse by paid caregivers in long-term care and assessed the role of several risk factors for different abuses and for multiple abuse types. The results are based on a 2005 random-digit-dial survey of relatives of persons in long-term care (the Michigan Survey of Households with Family Members Receiving Long Term Care Services, MILTC survey). The authors computed occurrence rates and conditional occurrence rates for each of six abuse types: physical, caretaking, verbal, emotional, neglect, and material. Among older adults who have experienced at least one type of abuse, more than half (51.4%) have experienced another type of abuse. Physical functioning problems, activities of daily living limitations, and behavioural problems are significant risk factors for at least three types of abuse and are significant for multiple abuse types. The findings have implications for those monitoring the well-being of older adults in long-term care as well as those responsible for developing public health interventions. (KJ/RH)

People with dementia living in extra care housing: learning from the evidence; by Rachael Dutton.

Working with Older People, vol 14, issue 1, March 2010, pp 8-11.

Extra care housing has now been around for a long time. People are referred as tenants because they can no longer cope at home and many already have dementia or have developed it while living in extra care. While extra care does promote independence, can it really provide support for people with dementia? Here, the author presents the conclusions of a study that asked this question and looks at the practicalities behind the answer. Her study, Extra Care housing and people with dementia: what do we know about what works regarding the built environment, and the provision of care and support?, is a summary of findings from a scoping review of the literature 1998-2008 on behalf of the Housing and Dementia Research Consortium (HDRC). Wardens’ survey 2010: an examination of the effects of removing the residential wardens from Bristol City Council's sheltered housing schemes for older people; by Bristol Older People's Forum. Bristol: Bristol Older People's Forum, September 2010, 36 pp (BOPF Opinion research survey, no 10).

During 2008 and 2009, Bristol City Council removed the residential wardens from its sheltered housing schemes for older people. This had followed a Government decision that costs of providing wardens could no longer be met from Supporting People money, unless residents in a scheme were in demonstrable need of a live-in warden. This report is based on a postal survey sent to 510 residents of former council sheltered housing schemes in all parts of Bristol; 198 responded. In all cases, only a tiny minority thought that things were better in respect of: quality of service; individual quality of life; security and safety; cleanliness; social activities; coping with cold weather; and loneliness and isolation. Much of the report is given over to individual responses. Appendices include the questionnaire, the preliminary report, and a list of the sheltered housing dwellings. (RH)

Building design, however, did not always take account of declining strength and poor mobility. Main scheme entrances were often difficult for some tenants to operate and were a barrier to going outside. (KJ)

Assisted living settings are charged with protecting privacy and choice of residents while guaranteeing safety and providing services. This article uses qualitative data from seven distinct assisted living settings to illuminate the challenge of balancing these expectations to maximize quality of life for residents. The simple object of door locks serves as the focal point for narrative from residents, family, staff, and administrators regarding the daily dilemmas of balancing these goals. Results show that there is a lack of consensus on the relative importance of locks and security within and across groups and settings. As residents age in place, sustaining the balance is likely to become even more challenging. (KJ/RH)

Personalisation is now the basis for social care policy: the focus is on what people want from public services. This project aimed to explore the implications of personal (individual budgets and the broader theme of personalisation for specialist housing for older people. This report starts with an overview of the key literature (specifically the Individual Budgets Pilot Programme Evaluation, IBSEN) along with changing policy. It reviews issues identified at the outset of the Building Choices project, and looks at how the views of older people in specialist housing settings can influence what happens, for example in terms of challenging ageism, and promoting inclusivity and age equality. (RH)

In 2006, Cambridgeshire Older People's Reference Group (COPRG) held meetings in sheltered housing and residential care settings in the county and learned of residents' relative isolation from the mainstream of neighbourhood life. This is a summary of the Reference Group's findings on the range of community groups in the county and the extent of older people's involvement in self help groups, faith and church supported groups, and groups run by specialist organisations. (RH)

Choice and control in specialist housing: starting conversations between commissioners and providers; by Sarah Vallelly, Jill Manthorpe.
In July 2007, Housing 21 began an exploration of how changes to the system of social care called personalisation might impact on specialist housing provision in England. Personalisation now forms the basis of English social care policy focusing the delivery of public services on what people might want or choose, in the context of eligibility criteria and means testing. It is designed to promote greater choice and control of the support that people receive. However, there have been concerns that the views of older people living in extra care housing settings have not been heard in the implementation of personalisation. In 2008-09, Housing 21 engaged older people and other groups with an interest in sheltered and extra care housing to debate the implications of personalisation for current and future housing, care and support services. This article discusses what arose from this consultation and its relevance to housing providers and commissioners. (KJ/RH)

Creature comforts: [importance of pet ownership in care homes]; by Natalie Valios.
The importance of pet ownership in care homes to older people is often underestimated, but there is evidence that it can help their well-being. This article reports on 'Pets and older people in residential care', a study of 234
Developing social well-being in new extra care housing; by Lisa Callaghan, Ann Netten, Robin Darton, Personal Social Services Research Unit - PSSRU, University of Kent; Joseph Rowntree Foundation - JRF.: Joseph Rowntree Foundation - JRF, November 2009, 4 pp (Ref: 2419).

Findings, November 2009, 4 pp (Ref: 2419).

Extra care schemes provide care and support so that older people can live independently. They also aim to prevent residents feeling isolated by providing opportunities for social interaction. These findings summarise research which examined how social well-being developed in 15 new-build housing schemes supported by the Department of Health (DH) Extra Care Housing Funding Initiative. While the study by researchers at the Personal Social Services Research Unit (PSSRU) suggests that extra care housing can provide an environment that supports social well-being, the findings indicate that the relationship between different aspects of such schemes is more complicated. The full report, 'The development of social well-being in new extra care housing schemes' is also published by the Joseph Rowntree Foundation (JRF) and is available as a free download (at www.jrf.org.uk). The effect of care setting on elder abuse: results from a Michigan Survey; by Connie Page, Tom Conner, Artem Prokhorov (et al).

This US study compares abuse rates for elders aged 60 and older in three care settings: nursing home, paid home care, and assisted living. The results are based on a 2005 random-digit dial survey of relatives of, or those responsible for, a person in long-term care (the Michigan Survey of Households with Family Members Receiving Long Term Care Services, MILTC survey). Nursing homes have the highest rates of all types of abuse, although paid home care has a relatively high rate of verbal abuse and assisted living has an unexpected high rate of neglect. Even when adjusting for health conditions, care setting is a significant factor in both caretaking and neglect abuses. Moving from paid home care to nursing homes is shown to more than triple the odds of neglect. Furthermore, when computing abuse rates by care setting for persons with specified health conditions, nursing homes no longer have the highest abuse rates. (KJ/RH)

'Extra Care' housing and people with dementia: what do we know about what works regarding the built and social environment, and the provision of care and support?: summary of findings from a scoping review of the literature 1998-2008 on behalf of the Housing and Dementia Research Consortium; by Rachael Dutton, Housing 21 - Dementia Voice; Housing and Dementia Research Consortium (HDRC).: Care Services Improvement Partnership (electronic), May 2009, 30 pp.

Most of the research evidence relating to people with dementia in extra care settings originates in the US (commonly known there as apartment-style assisted living); and findings have highlighted the importance of person-centred care, developing staff knowledge and expertise, and partnership or joint working. The present scoping review of the literature was commissioned by the Housing and Dementia Research Consortium (HDRC) with funding from the Joseph Rowntree Foundation (JRF). The aim was to identify published and grey literature from 1999 to March 2009 relating to these elements: design and use of the built environment; facilities, furnishings and equipment; care, support and therapeutic services; organisation and management; and outcomes in relating to health, well-being, policy and cost. This summary presents key findings regarding the prevalence of dementia in extra care settings and the suitability of extra care for people with dementia. It notes messages from current evidence and identifies evidence gaps for these, also themes including: activities; assistive technology; comparisons with other types of settings and care; cost-effectiveness; end of life in extra care; Home for Life and length of tenancy; integration versus dementia specialist models; impact of care, services and facilities; and prevalence of management of psychosocial and behavioural symptoms. A full report (116 pp) is also available (see http://www.housing21.co.uk/corporate-information/housing-21-dementia-voice/research/). ((RH)

Pathways to assisted living: the influence of race and class; by Mary M Ball, Molly M Perkins, Carole Hollingsworth (et al).
The influence of race and class on decisions to move to assisted living facilities in the US is examined. Qualitative methods were used to study moving decisions of residents in 10 assisted living facilities, varying in size and location, as well as residents' ethnicity and the influence of race and class. Data were derived from in-depth interviews with 60 residents, 40 family members and friends, and 12 administrators. Grounded theory analysis identified three types of resident based on their decision-making control: proactive, compliant, and
passive or resistant. Only proactive residents (less than a quarter of residents) had primary control. Findings show that control of decision-making for older people who are moving to assisted living are influenced by class, though not directly by race. The impact of class primarily related to assisted living placement options and strategies available to forestall moves. Factors influencing the decision-making process were similar for Black and White elders of comparable socioeconomic status. (RH)

Personalisation and housing: connections, challenges and opportunities; by Jon Head.

**Housing, Care and Support, vol 12, no 3, October 2009, pp 37-44.**

This article refers to common values and principles underlying personalisation and housing, and the importance of personalisation for providers like Hanover (a leading provider of housing and support services for older people). It also refers to challenges that personalisation presents for supported housing services, such as extra care. Possible responses to these challenges include a re-emphasis on listening to what residents - as well as commissioners - want, an honest appraisal of the concept of choice and its implications, especially in services such as extra care, and asking whether people might still be asked to choose a 'package' of core services, in order to retain sustainable models that will support other people now and in the future. The article then describes the Housing Associations’ Charitable Trust’s (hact) Up2Us project, a key initiative to put supported housing service users centre stage in commissioning and purchasing care and support, in which Hanover and the London Borough of Barking and Dagenham are among the partners. **BOLD, vol 20, no 1, November 2009, pp 12-18.**

A cross-sectional study of 1681 residents for all nine shelter homes were interviewed from March to September 2003 for this study, which for the first time describes the residents of publicly-funded shelter homes in Peninsular Malaysia. The mean age of residents was 71.8. The majority were male (58.6%), had no formal education (64.1%), were from rural areas (81.1%), had no family members (61.7%), and received no visits at all (85.5%) from either friends or relatives. 295 (27.3%) had mild to severe disability, 226 (20.9%) had poor vision and 47 (4.3%) had reduced hearing.

Only 447 (41.4%) of these older people were well-nourished, 707 (78.9%) were at risk of depression and 817 (75.6%) had probable cognitive impairment. 143 (14.1%) and 88 (8.1%) self-reported to have hypertension and coronary heart disease (CHD) respectively. It is clear that these residents have multiple co-morbidities. Effective management strategies are required to ensure maintenance if not improved quality of life. (The same article appeared in BOLD, vol 18, no 3, May 2008.) (RH)

Sheltered housing and care for older people: perspectives of tenants and scheme managers; by Brian J Taylor, Andrea Neill.

**Quality in Ageing, vol 10, issue 4, December 2009, pp 18-28.**

Sheltered housing schemes for older people took a new turn in the UK with the community care policy of the early 1990s giving care provision for people living in such schemes. There is relatively little research on what sheltered housing schemes provide and what makes them work well. The authors gathered data in relation to sheltered housing provision for older people in the north Antrim area of Northern Ireland through 10 focus groups with tenants and 16 questionnaires administered with managers of schemes. Tenants valued the independence and choice of sheltered housing in comparison with institutional care. They also highly valued the social interaction with other tenants, fostered by activities such as coffee mornings, regular lunches and social events. Tenants often helped each other with transport and when sick. Tenants of schemes in small towns were generally satisfied, because of access to shops, churches and other services. Transport was an issue for many,
particularly in more rural areas and in relation to attending hospital appointments. Scheme managers were often available to tenants for long and anti-social hours. The home care arrangements were generally regarded as satisfactory, although there were criticisms of the limited hours for tasks and the skills of some care workers. Some scheme managers thought that the publicly-funded home-care service would be more efficient if the staff were managed from the housing scheme. Appropriate social activities and effective care arrangements are an important aspect of supported housing, as well as the independence it offers. Consideration needs to be given to access to services in locating new schemes. (KJ/RH)

Across the United Kingdom, new build and remodelled 'extra care' schemes are being developed in many areas on the assumption that they offer older people with care needs an alternative to residential care. This paper reports an evaluation by a multi-disciplinary team of 10 extra-care schemes remodelled from sheltered housing or residential care units. The evaluation audited buildings and identified social and architectural problems. No two schemes in the sample were alike; some aimed for a dependency balance and others set a dependency threshold for admission. The three criteria used for assessing eligibility were the number of paid care hours the older person had at home, their property status and the type of disability. This article focuses on the wide variation in assessing eligibility for an extra-care place and on some social consequences of remodelling. A number of tenants remained in situ during the remodelling process in six of the schemes. Building professionals were unanimous that retaining some tenants on site caused significant development delays and increased the remodelling costs. There was also a social price to pay. 'Old' tenants resented their scheme changing into extra care and were hostile towards 'new' tenants who had obvious needs for support. In some extra-care schemes, 'old' tenants were refusing to participate in meals and all social activities. (KJ/RH)

2008

Journal of Housing for the Elderly, vol 22, nos 1/2, 2008, pp 3-44.

What we label as affordable clustered housing care options are making it increasingly possible for poor and frail older Americans to age in place comfortably and securely in residential-like settings combing both affordable shelter and long-term care. The hallmark of these housing arrangements is their sizeable population clusters of low-income frail people in need of supportive services. Despite their greater availability and the competing factors underlying their growth, the diversity of their supportive services and operations cloud their identity, resulting in uncertainty as to whether they have a common mission. In response to the need for a more careful delineation of this ageing in place option, this paper describes the distinguishing features of these hybrid settings and constructs a typology of their representative exemplars or prototypes. (RH)

By 2020, there will be 3 million more people aged 65+ than in 2008, and many will be increasingly frail. This discussion document summarises the related political, social, economic, technological and environmental trends, such as an increasingly "consumerist" older population that is "asset rich but income poor". It also notes the Caring Choices initiative (January 2008) and the forthcoming Green Paper on adult social care, and the implications for sheltered housing. Given the demands of the next generation of older people, it suggests that it is time to expand on the traditional model of housing and care provision and funding. The social care sector will have to offer a system that is fairer financially, meets needs more effectively, and offers people dignity and choice. (RH)

Through use of in-depth interviews, this study examines communication by 25 older women (aged 72-99) about their transition to assisted living and the personal sense of self. A combination of communication and ageing theory and socio-historical factors assist in understanding the communication older women use to describe themselves within the context of life events before and after becoming an assisted living resident. Findings reveal that a decrease in long-standing, traditionally female household tasks brought about by the transition to assisted living is a major factor leading to the inability to communicate the sense of self. Inability to adjust and accepting the downsizing of feminine sphere activities leads to several mental, physical and social implications. (RH)

The author's research entitled "The negotiation of belonging among long-term West Indian migrants residing in a sheltered housing scheme in Brixton, London", examined the intricacies of identity and placement. The Supporting People Framework governs this BME supported housing scheme within the Council's equalities ethos. Allwood's research sample of 26 women and men aged between 60 and 86 were working-class migrants who had moved to England in the 1950s and 1960s. Influenced by Gramsci's (1990) ideas about the involvement of ordinary people in social change, and Bhabha's (1994) idea of placement, Allwood investigated how the elders, assisted by others who acted on their behalf, negotiated their place in British society as recipients of support services, and engaged in consultation and user involvement processes. Both conflicting and supportive service provision arose. This created shifting boundaries in relation to belonging that emerged between the elders, their place of birth, their formative culture and their ongoing engagement with new experiences, other groups and the state. There is a systematic lack of evidence about the potential, the costs and the benefits, and consequently the cost-effectiveness of extra-care housing. These findings report on a study which aimed to assess as accurately as possible the comparative costs before and after residents moved into a new extra-care housing scheme, Rowanberries in Bradford, a 46-unit joint project between Methodist Homes Housing Association (part of MHA Care Group) and Bradford Adult Services. The study was conducted as an extension to an ongoing Department of health (DH) funded evaluation of the Extra Care Housing Funding Initiative by the PSSRU. Overall, the findings suggest that moving into the extra care housing scheme was associated with both higher costs and improved outcomes, compared with when people were living in their previous homes. The full report (same title) by Theresia Bäumker, Ann Netten and Robin Darton of the Personal Social Services Research Unit (PSSRU) at the University of Kent, is published by the Joseph Rowntree Foundation (JRF) and may be downloaded from its website (www.jrf.org.uk). Dying with dignity: [end of life project]; by Melanie Henwood. Community Care, issue 1746, 6 November 2008, pp 34-35.

In a society where experiences of dying are often a taboo subject, an end-of-life project focuses on allowing people to die at home with good care. This article outlines findings of the project conducted by Housing 21 and the Department of Health (DH) End of Life Care Programme. The report, "Is it that time already?" extra care housing at the end of life: a policy-into-practice evaluation', focused on enabling terminally ill extra-care tenants to die at home where that was their wish. Among the implications for practice identified is providing dignity and choice. (RH)

Assisted living for older people has acquired increased importance in American society. This qualitative study aimed to develop a substantive theory of older people's decision-making process to relocate to an assisted living facility. The researchers interviewed a purposive sample of 28 older people who resided in assisted living facilities. The theory of their decisions to relocate is a story about older people weighing and balancing gains and losses to go where the help is. Decision makers weigh and balance gains and losses before, during and after relocating to the assisted living facility. Older people stay at their current residence if gains outweigh losses, and they relocate if losses outweigh gains. Understanding the decision-making process in this segment of the population may lead to the development of interventions that can promote positive relocation experiences among older people and increase the effectiveness of their decision-making behaviours. An ethnographic study of stigma and ageism in residential care or assisted living; by Debra Dobbs, J Kevin Eckert, Bob Rubinstein (et al).
Ethnography and other qualitative data-gathering and analytical techniques were used to gather data from 309 participants (residents, family and staff) from 6 residential care or assisted living (RC-AL) settings in Maryland. Data were analysed using grounded theory techniques for emergent themes. Four themes emerged that related to stigma in RC-AL: ageism in long-term care; stigma as related to disease and illness; sociocultural aspects of stigma; and RC-AL as a stigmatising setting. Some strategies used in RC-AL settings to combat stigma include family member advocacy on behalf of stigmatised residents, assertion of resident autonomy, and administrator awareness of potential stigmatisation. Findings suggest that changes could be made to the structure as well as the process of care delivery to minimise the occurrence of stigma in RC-AL settings. Structural changes include an examination of how best, given the resident case mix, to accommodate care for people with dementia (e.g. separate units or integrated care). Processes of care include staff recognition of resident preferences and strengths, rather than their limitations. (RH)

Floating support for older people; by Tony Cousins, Phil Saunders.
Working with Older People, vol 12, issue 1, March 2008, pp 31-33.
The introduction of 'floating support' - a tenure neutral service - in many local authorities is causing much consternation among tenants because the scheme manager they thought would always be there is leaving. Yet with an ageing population combined with increasingly finite resources, how can services provide support to those who need it most, and to what degree should sheltered housing remain untouched? The authors outline the reasons why the new service model, while it may not be popular, is necessary. (KJ/RH)

The future of sheltered/retirement housing: a workshop: University of Sussex, Brighton, Wednesday 9th April 2008; by School of Social Sciences and Cultural Studies, University of Sussex; Sussex Gerontology Network; ERoSH. Brighton: School of Social Sciences and Cultural Studies, University of Sussex, 2008, 10 pp.
The changing nature of sheltered housing is discussed. This workshop considered what residents most value in sheltered housing, and what aspects they would like to see improved or that they liked least. Two case studies were presented: Mendip Housing; and Testway Housing in NE Hampshire. Themes emerging from participants’ discussions included: becoming a hub; support provision; and how changes are dealt with. (RH)
"Is it that time already?": extra care housing at the end of life: a policy-into-practice evaluation; by Lorna Easterbrook, Sarah Valletly, Housing 21; End of Life Care Programme, NHS, Department of Health - DH: Housing 21, 14 October 2008, 56 pp.

During 2008, Housing 21 and the NHS End of Life Care team conducted a 6-month service improvement pilot project designed to enhance dignity and choice in end-of-life care (EoLC) in three extra care housing settings in north-east England and East Anglia. This report is an evaluation of the project, exploring what changed over the 6 months and assessing the extent to which the approaches used in this particular project might be translated to other extra care settings nationally. Four key issues are identified: promoting dignity and choice for older people and family carers; support and training for staff; extra care and its links to wider health and specialist resources; and commissioning and funding. (RH)

Meeting the sheltered and extra care housing needs of black and minority ethnic older people: a Race Equality Foundation briefing paper; by Adrian Jones, Race Equality Foundation.

The author notes the main reports on housing for black and minority ethnic older people that have been published since 1984. A recurrent theme has been the lack of awareness of BME older people's housing needs, and that the requirement for specialist sheltered housing fulfils only part of such need. One possible solution is the provision of extra care housing, and this article cites a few examples of good practice in meeting minority ethnic housing needs. Further information sources are suggested. (RH)

This document provides a toolkit for undertaking work that will support a whole system approach to planning and developing accommodation and care. It is good practice rather than mandatory and has been prepared specifically to accompany 'Lifetime homes, lifetime neighbourhoods', the government's national housing strategy for an ageing society, to offer guidance for commissioners and providers (local authorities, registered social landlords (RSLs), and the private sector) to enable them to produce accommodation and care strategies for older people. The document includes material that would be helpful to preparation of a local study; guidance, briefing notes, tools for completing particular elements of the study, good practice examples, and draft material that can be incorporated in a local study. It includes techniques such as finding indicators of potential need, and mapping existing local provision. The document's basic assumption is that accommodation - whether in general housing or in some form of specialist accommodation - is crucial in providing a context to maintaining or restoring independence and ensuring quality of life. (RH)

This briefing summarises work undertaken by the Centre for Policy on Ageing (CPA) in partnership with The Older People's Programme (OPP) to explore older people's experiences of living with high support needs. It is a project commissioned by the Independent Living Committee of the Joseph Rowntree Foundation (JRF). The aim of the project is to identify the critical elements of independent living for older people with high support needs. A final report will be available in November 2008. This briefing can be downloaded from the CPA website. (KJ/RH)

Personal choice in sheltered / retirement housing: a workshop: University of Sussex, Brighton, Friday 26th September 2008; by Peter Lloyd, School of Social Sciences and Cultural Studies, University of Sussex; Sussex Gerontology Network.: School of Social Sciences and Cultural Studies, University of Sussex, 2008, 3 pp.

Two ways in which personal choice might be exercised were explored in this workshop. First personal budgets (or individual budgets, or self directed support), for which West Sussex was one of thirteen pilot sites. The complexity, innovativeness and risks of the system are commented on. The second, a service menu, involved
residents in one locality (North Somerset) selecting a "menu" of different levels of support (low, medium or high). More than two-thirds chose the low level, and only 5% the high level. While sheltered housing schemes retain their managers, there remains a question mark as to whether this choice could be denied to residents who may only be able to choose items on "the menu". (RH)

Remodelling to extra care housing: some implications for policy and practice; by Anthea Tinker, Fay Wright, Julienne Hanson (et al).

Quality in Ageing, vol 9, issue 1, March 2008, pp 4-12.

Extra care housing is seen as a popular option for older people by families, some older people, policy makers and practitioners. Some new build is being provided, but another option, for which grants are available, is to remodel existing outmoded buildings. This research reports on recent attempts from 10 case study areas in England to remodel sheltered housing and residential care homes to extra care housing. The results are mixed, with satisfaction reported by many new tenants, anger by some existing ones, challenges at every stage of the project for design and construction teams, and issues over the provision of assistive technology and care. Nearly all the schemes experienced unexpected problems during the course of construction. Remodelling is not necessarily faster or cheaper than commissioning a purpose-designed new building. Nevertheless, remodelling may be the only viable option for some unpopular or outdate schemes. The research showed that remodelling is not a quick fix, but that it did have considerable advantages for many of the older people and support staff who were living and working in the remodelled buildings. The research concluded that remodelling should only be undertaken when other options have been carefully examined. Drawing on the research findings, advice to policy makers and practitioners who are considering this course of action is outlined in the discussion. (KJ/RH)

Sheltered housing's contribution to health and social care; by ERoSH - the Essential Role of Sheltered Housing;
Housing Learning and Improvement Network - Housing LIN, Care Services Improvement Partnership - CSIP, Department of Health - DH, Chippenham, Wiltshire: ERoSH, 2008, 1 DVD.

More people live in sheltered housing than in care homes. ERoSH was formerly known as the Emerging Role of Sheltered Housing project, and believes that there is a huge unmet potential for sheltered housing that can benefit the whole community. That potential is in the buildings, the staff, and the residents. This DVD emphasises the benefits of partnership working. It demonstrates a range of health and social care-related activities that do or should take place in sheltered housing including: exercise; falls prevention; keeping active; helping access to other services; healthy eating; screening; and social activities. ERoSH produces checklists for health and social care professionals, and the good practice examples in the DVD pick out just a few themes. The DVD is in two parts, one aimed primarily at health care professionals, and the other primarily at social care professionals. The aim is that it should be shown at team meetings and training courses. It is also viewable on the ERoSH website. Attention is also drawn to further good practice examples on the Housing LIN website (http://icn.csip.org.uk/housing/). (RH)

Winners and losers: sheltered housing and floating support; by Joe Oldman.

One of the cornerstones of social housing is tenant participation. Changes in service delivery are subject to genuine consultation with the people it affects. The author argues that this has been forgotten in the rush to introduce floating support. He refers to the research that Help the Age is undertaking based on tenants' concerns, to argue that greater understanding of the consequences of floating support in people's lives is needed before this new model becomes irreversibly widespread. An earlier version of this article was published in Working with Older People (vol 12, issue 2, June 2008). (RH)

Since the 2005 general election, there has been a renewed emphasis on older people's housing issues, largely because an increasing proportion of the electorate is aged over 50. This document accompanies a research project, which is part of the Joseph Rowntree Foundation's (JRF) research and development programme, by authors at the University of West of England and Housing 21. The research was conducted between April 2006 and March 2007. The overall aim of the study was to explore the social well-being of 'frail' people living in extra care housing. This review explores the literature on best practice in promoting well-being in a range of housing and care settings. The Findings (no 2115) and the full report are available as a free download on the JRF website. (KJ/RH)

Characteristics of residents and providers in the Assisted Living Pilot Program; by Susan Hedrick, Marylou Guihan, Michael Chapko (et al).

The number of residents in assisted living in the US has rapidly increased, although these facilities still primarily serve people who can pay out of their own pockets. The US Department of Veteran Affairs (DVA) was authorised to provide this level of care for the first time in the Assisted Living Pilot Program (ALPP). The authors describe the residents and providers, comparing them across three facility types and other populations to assess the characteristics and feasibility of this new approach. They report on 743 residents placed from 2002 to 2004. The DVA contracted with 58 adult family homes, 56 assisted living facilities and 46 residential care facilities. The average ALPP resident was a 70-year old unmarried White man referred from hospital and living in a private residence prior to placement. Adult family homes enrolled residents requiring greater levels of assistance with activities of daily living (ADLs) from other facility types. Assisted living facilities were less likely than adult family homes to admit residents with functional disabilities and less likely than either adult family homes or adult residential care facilities to admit residents with certain care needs. ALPP place residents with a wide range of characteristics in community facilities that varied widely in size and services. This information can help determine the role of this type of care in and outside the DVA. (RH)

Housing with care schemes are intended to: promote independence; reduce social isolation; provide an alternative to residential or institutional models of care; provide residents with a home for life; and improve the quality of life for residents. The authors present the findings of a longitudinal, comparative study of seven different housing with care schemes for later life. The study aimed to identify, describe and examine different models of housing with care in terms of funding, the type of care and support provided, the characteristics of the residents, engagement with the wider community, and issues around choice and control. The report considers: the 'different way of life' and what motivates residents to move; what makes schemes distinctive; the services and resources provided; meeting and balancing different kinds of need; and lessons for practitioners, commissioners and policy-makers. Findings, 2158, October 2007, 4 pp.

Interest is growing in the role of housing schemes for older people that combine independent living with relatively high levels of care. This longitudinal comparative study of seven schemes in England examines different models of housing with care for older people. The full report, 'Comparative evaluation of models of housing with care for later life' by Karen Croucher, Leslie Hicks, Mark Bevan and Diana Sanderson, is published by JRF and available as a download from (www.jrf.org.uk). Dignity through design: how the architecture can make a difference; by Judy Sarre. Working with Older People, vol 11, issue 2, June 2007, pp 28-31.
The Open University's Research on Age Discrimination Project (RoAD) calls for better design of public spaces to empower older people. This article explains the background and thinking behind Archadia's award-winning design for New Larchwood, an extra care housing scheme developed by Hanover Housing Association in partnership with Brighton and Hove City Council. The aim is to bring dignity through design to its residents. (RH)

Extra care housing; by Melanie Henwood.
Community Care, issue 1682, 19 July 2007, pp 34-35.
Karen Croucher, Leslie Hicks and Karen Jackson compiled 'Housing with care for later life: a literature review' for the Joseph Rowntree Foundation (JRF, 2006) with the aim of summarising the research evidence on whether such housing schemes promote independence, reduce social isolation and reduce the use of institutional care. Melanie Henwood reviews this research with reference to how extra care housing can benefit people needing high levels of support. The review indicates considerable gaps in the UK research base. She also refers to an Extra Care Housing Toolkit that has been produced by the Care Services Improvement Partnership (CSIP) (see http://networks.csip.org.uk/IndependentLivingChoices/Housing/Topics/tags/). Extra care housing: a concept without a consensus; by Anthea Tinker, Hannah Zeilig, Fay Wright (et al).
Quality in Ageing, vol 8, no 4, December 2007, pp 33-44.
Extra care housing has developed from sheltered housing and has increasingly been seen as a popular option by policy-makers for a number of reasons. These include the inability of conventional sheltered housing to be an adequate solution for a growing population of very old people, the decline in popularity and high costs of residential care, and perceived problems with older people staying in mainstream housing. There is, however, no agreed definition of extra care housing, even though a growing number of government grants are becoming available for this type of housing. This is causing confusion for providers and for older people and their families who are not sure exactly what is provided. This lack of clarity means that this form of housing has become an erratic and piecemeal form of provision. (KJ/RH)

Housing and care for older people: life in an English purpose-built retirement village; by Miriam Bernard, Bernadette Bartlam, Julius Sim (et al).
Retirement communities are a relatively new long-term accommodation and care option in the United Kingdom. This paper addresses questions of suitability and acceptability of such accommodation by reporting the findings of an independently funded three-year study of a new retirement village, Berryhill, in the north Midlands of England. The paper examines the background to this and similar developments, details how the study was carried out, and then examines what it was like to live at Berryhill. It focuses on the housing and care aspects, and explores the residents' motivations for moving to the village; their views about the accommodation; and their use of and satisfaction with the social and leisure amenities. The health and care needs of residents and the formal and informal supports are also featured. The conclusion discusses whether the village can truly be a 'home for life' in the face of increasing frailty, and whether or not these new models of accommodation and care can indeed cater for both 'fit' and 'frail' older people. I'll do it my way: [person-centred planning]; by Lynn Vickery.
Housing, Care and Support, vol 10, no 1, August 2007, pp 12-17.
Providers and service users associated with supported housing are increasingly using tools to measure outcomes against targets with indicators that equate change with progress. This article reports and reflects on a small research project undertaken by London South Bank University for Carr Gomm, using the World Health Organization's (WHO) Quality of Life Application Model to assess outcomes of support in relation to person-
centred planning, the chosen principled support approach adopted by Carr Gomm. The evaluation is based on a small number of case studies which serve to prompt providers and commissioners of supported housing to ask what constitutes quality of life from the client's perspective, and how in turn this challenges the priorities inherent in the supported housing service. This research was to report on a key challenge (and its implications) that Australian not-for-profit organisations face as they manage and renew an ageing stock of independent living units (ILUs) for older people. A national survey of ILU organisations complemented by 28 interviews with ILU managers, peak aged care organisations and government officers, and five workshops with ILU managers was undertaken. The results showed that ILUs are a policy response to the housing needs of older people with low income and limited assets. However, ILU organisations face significant challenges as the overall condition of ILUs deteriorates, as they seek to meet higher expectations and as they move into a phase of renewal. It is concluded that the future of ILU organisations is at a watershed, with many reconsidering their role as providers of ILUs. Any extensive reduction in ILUs will have implications for older people, for public housing providers and for delivery of community care to older renters. (KJ/RH)

The mediating role of health perceptions in the relation between physical and mental health: a study of older residents in assisted living facilities; by Yuri Jang, Elizabeth Bergman, Lawrence Schonfeld (et al).
Responding to the increased need for research on older residents in assisted living facilities (ALFs), this study assessed the connections between physical and mental health for 150 residents in ALF settings in Hillsborough County, Florida. The study's major focus was to explore whether individuals' subjective perceptions of their own health mediate the associations between health-related variables (chronic conditions and functional disability) and depressive symptoms. The analyses showed that the adverse effects of chronic conditions and functional disability on depressive symptoms were not only direct but also indirect through negative health perceptions. The findings that health perceptions serve as an intervening step between physical and mental health provide important implications for promotion of mental well-being in older residents of ALFs. In addition to disease or disability prevention and health promotion efforts, attention should be paid to ways to enhance older people's positive beliefs and attitudes toward their own health and to promote healthful behaviours. Models of housing in later life care; by Alison Petch.
Community Care, issue 1700, 22 November 2007, pp 36-37.
Choosing the most suitable care accommodation for older people is an exacting task, one in which research that compares models of care can assist. The author reviews one such example, 'Comparative evaluation of models of housing with care for later life' by Karen Croucher and colleagues at the Centre for Housing Policy (CHP) and the Social Work and Development Unit, University of York, published by the Joseph Rowntree Foundation (JRF). For the residents of the seven schemes studied, the benefits outweighed any disadvantages. (RH)

Extra care housing is an increasingly popular form of housing with care for older people, largely because of its potential for maximising independence by providing flexible care and support. However, far less attention has been paid to another important aspect of quality of life, social well-being. This article reports on a research project conducted by the University of the West of England (UWE) and Housing 21 that explored good practice in promoting social well-being in extra care housing. The authors identify several key factors in supporting the social lives of residents, and present recommendations for good practice. (KJ/RH)

Personal assistance; by Martin Kitchener (ed).
Five articles on the topic ‘personal assistance’ which in the United States is a term that emerged from the disability community to describe the help that people with self-care limitations need on a regular basis. In the United Kingdom this is usually described as social care or live-in care. This journal issue looks at how personal assistance in the US operates, particularly in comparison with similar care provision provided in Sweden and in England. Articles on the Swedish and English care provision are included in this issue. (KJ/RH)

Predicting older Australians’ leisure-time physical activity: impact of residence, retirement village versus community, on walking, swimming, dancing and lawn bowling; by Evonne Miller, Laurie Buys.
Despite well-publicised health and social benefits of physical activity, like their younger counterparts, most older people tend to lead relatively sedentary lives. This cross-sectional Australian study investigates the impact of residential locality, specifically whether older people live in their own home in the community (n=374) or in independent living units in retirement villages (n=323) on participation in the leisure-time physical activities (LTPA) of walking, swimming, dancing and lawn bowls. The research illustrates that, despite being older and in poorer health, retirement village residents report greater frequency of participation in the LTPA of walking, dancing and lawn bowls than older Australians living in the community. As encouraging physical activity is a global public health priority, these findings suggest that a priority for future research is to investigate how and why the social and physical environment of retirement communities might foster LTPA in older people. Findings, 2115, August 2007, 2 pp.
Since the 2005 general election, there has been a renewed emphasis on older people’s housing issues, largely because an increasing proportion of the electorate is aged over 50. These findings outline a project, part of the Joseph Rowntree Foundation’s (JRF) research and development programme, by authors at the University of West of England and Housing 21. Data was collected through 36 in-depth interviews with extra care residents and managers from six extra care schemes in England. Themes emerging as important to social well-being were: friendship and social interaction; the provision of facilities; design, location and layout; the philosophy of care; engagement with the local community; and the role of family caregivers. The full report, ‘Social well-being in extra care housing’ is available as a free download on the JRF website. (RH)

Remodelling sheltered housing and residential care homes to extra care housing: advice to housing and care providers; by Anthea Tinker, Julienne Hanson, Fay Wright (et al), King’s College London; University College London - UCL. London: King’s College London; University College London, October 2007, 19 pp (summary 4 pp).
A multi-disciplinary team of 2 social gerontologists, 2 architects, a rehabilitation engineer, an occupational therapist and an economist carried out this research, which was funded by the Engineering and Physical Sciences Research Council (EPSRC grant no EP/C532945/1). The aims were to: examine how a sample of 10 local authority and housing association sheltered housing and residential care homes had been remodelled to become extra care; audit buildings to see how the remodelling schemes have been adapted; identify social and
architectural problems resulting from the remodelling; explore tenants' experiences of living in a remodelled extra care scheme; and elicit the view of care and support staff of how well a remodelled extra care scheme works in practice. Most of the 19-page document comprise advice to policy makers, housing and service providers, built environment professionals, occupational therapists, rehabilitation engineers, funders and commissioners. There is also advice on accessibility issues. The 4-page summary gives and outline of to the study and its aims, and findings on these key points: architecture, assistive technology (AT), social issues, and costings. (RH)

Resident involvement (or tenant participation as it used to be called) has been an issue for a long time. This workshop included consideration of the Supporting People programme in providing housing-related support to enable people to live independently. Participants (including residents in sheltered housing) explored the dynamic processes involved in resident involvement and discussed ways in which involvement might be promoted. (RH)

The salience of social relationships for resident well-being in assisted living; by Debra Street, Stephanie Burge, Jill Quadagno (et al).

Data from 384 assisted living residents interviewed for the Florida Study of Assisted Living conducted in 2004-05 were used to estimate associations between resident well-being and organisational characteristics, transition experiences, and social relationships, controlling for gender, age, education and physical functioning. To varying degrees, depending on the measures used, higher resident well-being was associated with facility size, facility acceptance of payment from Florida's low income programme, and resident perceptions of adequate privacy. Non-kin room sharing reduced life satisfaction, whereas food quality positively affected all measures of well-being. The most consistent findings concerned internal social relationships, for which residents with high scores reported more positive well-being across all measures than those with low scores on the same measures. Individuals have the capacity to form new support networks following a move to assisted living, and relationships formed become more salient to their well-being than the continuation of past relationships or the physical characteristics of the immediate surroundings. Shared living in supported housing: client responses and business decisions; by Lynn Vickery, Veronica Mole.

The shared housing model has been used widely for many years in association with supported housing. It is the subject of debate among providers and commissioners, who may regard it as old-fashioned and not conducive to independent living, but for some clients and organisations it continues to offer a positive option in helping alleviate loneliness and isolation. Current growth in the work of social landlords and their agents includes a wider range of client groups with a variety of aspirations and support needs. Shared housing may offer new opportunities to these groups. With the new emphasis on neighbourhoods and inclusion, does the shared housing model possess attributes that commend it to communities in new ways, or is it a model of the past? The article offers suggestions to enable shared housing to be evaluated as part of housing associations' business plans while keeping a focus on residents' views, as reflected in 25 case study locations. Social well-being in extra care housing; by Simon Evans, Sarah Valdelly, Joseph Rowntree Foundation - JRF.

Since the 2005 general election, there has been a renewed emphasis on older people's housing issues, largely because an increasing proportion of the electorate is aged over 50. This document reports on a research project, which is part of the Joseph Rowntree Foundation's (JRF) research and development programme, by authors at the University of West of England and Housing 21. The research was conducted between April 2006 and March 2007. A literature review was carried out as part of this work and is available as a separate document. The
overall aim of this study was to explore the social well-being of 'frail' people living in extra care housing. Data was collected through 36 in-depth interviews with extra care residents and managers from six extra care schemes in England. Themes emerging as important to social well-being were: friendship and social interaction; the provision of facilities; design, location and layout; the philosophy of care; engagement with the local community; and the role of family caregivers. The Findings (no 2115) and the literature review are available as a free download on the JRF website. (KJ/RH)

Supporting independence for people with dementia in extra care housing; by Simon Evans, Tina Fear, Robin Means (et al).

Dementia: the international journal of social research and practice, vol 6, no 1, February 2007, pp 144-149.
This paper uses findings from a 3-year longitudinal study to examine the opportunities and challenges provided by extra care housing to support independence for people with dementia. The study by Sarah Vallelly of Housing 21 and Simon Evans, Tina Fear and Robin Means of the Faculty of Health and Social Care, University of the West of England (UWE) has the title 'Opening doors to independence: a longitudinal study exploring the contribution of extra care housing to the care and support of older people with dementia'. The views of the tenants themselves were central to this research, along with those of relatives, care staff and other professionals from housing, health and social care. The authors discuss three features of the extra care environment seen as particularly important in supporting independence: the freedom to come and go within and beyond the housing scheme; maximising opportunities to "do things for themselves"; and having choices about how to spend their time. Abuse in sheltered housing: prevention, safeguards and good practice; by Imogen Parry.

Sheltered and retirement housing now accommodates frailer and more vulnerable people than originally intended. People move in later life and remain much longer than was the case 20 years ago. In this article, the author focuses on measures relevant to the abuse of vulnerable adults within sheltered (rented) and retirement (owner occupied) housing. These include the Department of Health (DH) "No secrets" document (2002), the Supporting People programme (introduced in 2003), the CHSC (formerly Centre for Sheltered Housing Studies), and a Sanctuary/Hanover policy document in 2000 on protection of vulnerable adults from abuse in sheltered housing. However, the issue of abuse of staff working in these sectors is not discussed. (RH)

Findings are presented of the "desk research" stage of a proposed "Review of service provision for a changing, diverse older population: extra care housing and care homes". This phase reviewed research by the 1990 Trust and the Policy Research Institute on Ageing and Ethnicity (PRIAE); examined current provision of extra care and care homes for black and minority ethnic (BME) older people; and looked at other strategies for provision. Since there is neither much research on or provision for BME older people, it is suggested that part of an otherwise non-ethnic-specific extra care development be used to meet this group's needs, as is the case in Bristol. The impact of an assisted living services (ALS) programme on directors of state-funded congregate housing is explored. The authors interviewed congregate housing directors about how adding the ALS programme to their facilities affected their management experiences. Four themes emerged from the focus group data: importance of assisted living services for promoting ageing in place; “cost” of offering ALS; differences in how the ALS programme was implemented; and organisational issues emerging from the merger of housing and healthcare models. The effects of organizational policies on resident perceptions of autonomy in assisted living; by Elzbieta Sikorska-Simmons. Journal of Housing for the Elderly, vol 20, no 4, 2006, pp 61-78.
Organisational policies were measured in terms of policies that foster resident choice and control in the facility, using a sample of 412 residents in 59 assisted living (AL) facilities. Resident autonomy was assessed according to resident perceptions of influence and independence. Hierarchical linear modelling was used to examine the effects of organisational policies on resident autonomy, controlling for facility size, ownership and level of care. Higher levels of choice-enhancing policies were related to more favourable resident perceptions of autonomy. These findings suggest that allowing residents more choice in their daily routines may contribute to greater resident autonomy. (RH)

Residential care or assisted living describes diverse facilities providing non-nursing home care primarily to older residents. This article derives typologies of assisted living based on theoretically and practically grounded evidence. The authors obtained data from the Collaborative Studies of Long-Term care, which examined 193 assisted living facilities in four states: Florida, Maryland, New Jersey and North Carolina. By using mixture modelling, typologies were derived in five different ways, based on: structure; process; resident case-mix; structure and process; and structure, process and resident case-mix. Although configurations of typologies varied as a function of criterion variables used, common themes emerged from different cluster solutions. A typology based on resident case-mix yielded a five-cluster solution, whereas a typology based on structure, process and resident case-mix resulted in six distinct clusters. Medical case-mix or psychiatric illness and high resident impairment were two clusters identified by both strategies. Typologies such as those described in this article may be useful in clinical practice, research and policy. To the extent that public payment defines its own cluster, the potential for inequities in care merits careful attention. (RH)

Extra care housing: is it really an option for older people?; by Laura Dawson, Jacquetta Williams, Ann Netten. Housing, Care and Support, vol 9, no 2, October 2006, pp 23-29.
Extra care housing enables older people to remain in their "own home", while providing appropriate housing and access to health and social care services that are responsive to their needs. This type of provision is very much in line with the government policy of fostering people's sense of control and independence, and is a priority area for expansion. The authors explore current levels of development and expansion of extra care housing in terms of the numbers of schemes and places and factors that contributed to and were problematic in its development. (RH)

Housing with capacity: the Mental Capacity Act explained; by Toby Williamson.
Housing, Care and Support, vol 9, no 4, December 2006, pp 13-19.
The Mental Capacity Act 2005 comes into effect in England and Wales in 2007. The Act contains principles, procedures and safeguards to empower people to make decisions for themselves wherever possible, but also to ensure that decisions made on their behalf if they lack the mental capacity to make the decision themselves are done in their best interests. The Act will apply to anyone working in the supported housing field or residential care where residents may lack the capacity to make decisions as a result of illness, injury or disability. This article gives an overview of the Act and its relevance to the field of supported housing. (RH)

Housing with care includes a variety of concepts within its remit: very sheltered housing, supported housing, integrated care, extra care, assisted living, as well as various forms of retirement communities. Reflecting the current emphasis on developing evidence-based policy and practice, this review focuses on the empirical literature that reports primary research and service evaluations. Researchers at the University of York identify different models of housing with care both in the UK and elsewhere. They consider themes that emerged from the more theoretical (and mainly American) studies. They draw together the evidence from 11 British studies, and structure their review around these themes: promoting independence; health, well-being and quality of life; social integration; home for life; housing with care as an alternative to residential care; cost-effectiveness; and affordability. A concluding chapter presents the main messages for provider organisations. Appendices include search strategies, and the databases and websites searched. (RH)

There is growing interest and investment from both the public and private sector in housing schemes for older people that allow independent living to be combined with relatively high levels of care. Reflecting the current emphasis on evidence-based policy and practice, researchers at the Centre for Housing Policy at the University of York conducted an extensive search for empirical research evidence published since 1999 relating to housing with care for later life. They found just eleven UK studies that sought to evaluate rather than describe schemes, encompassing 24 different schemes. The findings of this review of these studies are given. There is a full report of the same title. (KJ)

Ideal versus actual levels of decision-making in South Australian aged care resident committees; by Leah Wilson, Neil Kirby.: Blackwell Publishing, June 2006, pp 69-73.
177 resident committee members in 15 South Australian low-level residential aged care facilities (RACFs) participated in this study, the aim of which was to investigate the level and types of decision-making that residents have. Residents wanted to participate significantly more in decision-making than they were currently allowed to, particularly in the areas of deciding on new activities, planning menus and making policies on safety hazards. The existence of resident committees did not ensure that residents participated in decision-making to the extent that they wished. Resident committees would benefit from regular evaluation to determine whether residents are provided with opportunities to participate in decision-making in areas that are important to them and to the levels they desire. (RH)
"It's fantastic!": [Extra care housing for disabled people]; by Jim Ledwidge. Community Care, no 1608, 2 February 2006, pp 36-37. Extra care housing has been used to give older people independence, but it can also dramatically improve the lives of disabled people. This article supports this assertion, by describing an innovative large supported housing scheme in Bradford, which demonstrates the use of extra care housing for severely disabled people under pension age as an alternative to residential care. The author illustrates how the right environment and support reduces levels of dependency and reduces the need for intensive packages of care. (RH)

Job satisfaction and intention to quit among frontline assisted living employees; by Janice K Purk, Scott Lindsay. Journal of Housing for the Elderly, vol 20, no 1/2, 2006, pp 117-132. Assisted living facilities in the US face high rates of employee turnover; and nursing homes with high employee turnover report reduced quality of care for residents, lower employee morale, and financial burden for the facility owners. Five communities in Georgia, US were examined to determine the effects of employee turnover. The Job Descriptive Index and Job-in-General surveys measured job satisfaction. 36 respondents' attitudes and intention to quit were measured. Results indicated age and tenure did not correlate significantly with intention to quit. However, dissatisfaction with pay rates, opportunities for promotion, and the perceived amount of emotional exhaustion and physical strain are more likely to have greater quitting intentions. Pay and promotion satisfaction were significantly correlated with job satisfaction but not with quitting intentions. Frontline employees were satisfied with their work, supervision and co-workers, but were dissatisfied with the pay levels and opportunities for promotion. Communities with lower staff turnover had more satisfied employees. (RH)

Linking resident satisfaction to staff perceptions of the work environment in assisted living: a multilevel analysis; by Elzbieta Sikorska-Simmons. The Gerontologist, vol 46, no 5, October 2006, pp 590-598. Research indicates that the quality of the work environment for care home staff influences resident satisfaction indirectly, through its impact on staff attitudes and relationships with residents. 235 residents and 298 staff members in 43 assisted living facilities were included in this analysis. Data were collected by self-administered questionnaires. Staff perceptions were assessed at the facility level, using aggregate measures of job satisfaction, organisational commitment, and views of organisational culture. Greater resident satisfaction in the facility was associated with higher staff job satisfaction and more positive staff views of organisational culture (e.g. greater teamwork and participation in decision-making). From residents characteristics, only education was significantly related to satisfaction, with the more educated being less satisfied with assisted living. While these findings suggest that a good quality of work environment for the staff contributes to a better quality of care for residents, more research is needed to examine the causal nature of this relationship. (RH)

Making the case for retirement villages; by Joseph Rowntree Foundation - JRF.: Joseph Rowntree Foundation - JRF, April 2006, 4 pp. Findings, 0166, April 2006, 4 pp. There has been a growing policy emphasis on promoting independence for older people, offering them choices, and improving their quality of life. Retirement villages appear to serve current policy agendas very well. They
offer purposefully designed barrier-free housing with the associated autonomy, a range of facilities and activities that are not care-related which generate opportunities for informal and formal social activity and engagement, alongside a range of care and support services that can respond quickly and flexibly to a range of care needs over time. This is an outline of the findings in Karen Croucher’s report (same title) published by the Joseph Rowntree Foundation (JRF). She uses as her research base previously published studies and data from an ongoing comparative evaluation of seven different housing with care schemes for older people. The two reports on which this paper is based are also by Croucher and colleagues, and published by JRF: ‘Housing with care for later life: a literature review’; and ‘Living in Hartrigg Oaks: resident views of the UK’s first continuing care retirement community’. (RH)

People in advanced old age with frailties and those who are resident in old-age institutions manage their identities within the constraints of stigmatised settings. This paper compares the processes of identity construction in an old-age home and in a sheltered housing project for older people in Israel. Applying a symbolic-interactionist perspective that sees old-age institutions as social arenas for the reconstruction of identity, the paper first distinguishes the residents’ constructions of stigma and deviance. While the old-age home residents collectively turned their stigma into a source of positive labelling, the sheltered housing residents drew advantages from their previous roles and statuses. Gossip is shown to play a critical role in reproducing stigma, particularly in the old-age home. These findings are used to demonstrate the variability and potential for adaptation among the residents - who are often stereotyped as homogeneous and passive. The paper concludes with a discussion of the literal and metaphorical languages used by older people, and of stigma as a positive instrument that can introduce content into the definition of the self. (KJ/RH)

Measuring resident and family member determinants of satisfaction with assisted living; by Perry Edelman, Marylou Guihan, Fred B Bryant (et al).

Measures of satisfaction with assisted living from residents' and family members' perspectives were developed in this study. Data were collected from 204 residents and 232 family members associated with 11 assisted living facilities. Confirmatory factor analysis was used to evaluate the goodness of fit of a priori measurement models. Iterative analysis to improve measurement models resulted in a multifaceted unidimensional model of resident satisfaction and a 5-factor model of family member satisfaction. These measures should help administrators attempting to meet the needs of their residents, and be useful to potential clients in judging the appropriateness of specific assisted living facilities. (RH)

Opening doors to independence: a longitudinal study exploring the contribution of extra care housing to the care and support of older people with dementia; by Sarah Vallelly, Simon Evans, Tina Fear (et al), Housing 21; Housing Corporation; Dementia Voice; Faculty of Health and Social Care, University of the West of England (UWE). London: Housing 21, 2006, 137 pp.

More than 750,000 people in the UK have dementia, and by 2050 this is will rise to 1.8 million. This is a report of 3-year tracking study carried out by Dementia Voice and the University of West of England (UWE), funded by Housing 21 and the Housing Corporation. The aim was to evaluate the contribution that extra care housing can make to the long term care and support of people with dementia; to make recommendations for good practice and assess the limitations of extra care housing; and to capture the views of older people with dementia. The study tracked people with dementia in Housing 21’s extra care housing courts. Data was collected on 103 people; and 36 people with dementia were interviewed up to five times from July 2003 to October 2005. This report presents findings on the extra care environment; the health and social care of residents with dementia; and the perspectives of residents and their relatives. Overall, extra care housing is providing a good quality of life for the majority of residents who have dementia, many of whom also have complex health needs. Many older people recognise that, of the housing options available to them, extra care is more suitable in helping them to maintain their independence. A 14-page summary is also available on Housing 21’s website. (RH)

Increasingly, government policy on health and social care stresses the value of preventative care. This concept can be ambiguous, ranging from "that little bit of help" enabling a person to continue to live independently, to the support needed to prevent hospital admission or re-admission. Sheltered housing must therefore clearly state that its prime task is to provide preventative care. This report comprises commentaries of contributors' papers, variously representing the perspectives of the Supporting People programme, the ERoSH Outcomes Tool, and of residents themselves. A paper by the Convenor, Peter Lloyd, "Preventative care and the role of sheltered/retirement housing" is also available on the Reports section of the Housing LIN website, (http://www.changeagentteam.org.uk/housing). This book presents insight into the positive role nature and the outdoors can play in the lives of older adults, whether they live in the community, in an assisted-living environment, or in a nursing home. Current research suggests that increased contact and activity levels with the outdoors can be an important therapeutic resource with significant mental and physical health benefits. This book examines how to make the most of outdoor spaces in residential settings. It explores attitudes and patterns of use; and the effect of plants, the physical environment, and health-related outcomes from contact with nature and enhanced physical activity. The book has been published simultaneously as the Journal of Housing for the Elderly, vol 19, nos 3/4, 2005. (KJ/RH)

Price: US$24.95 pbk; US$39.95 hdbk

This workshop develops themes from the previous workshop, "Preventative care and sheltered/retirement housing" held on 6 April 2006. Sheltered housing is not meant to provide support for all categories of older people, and there are some for whom sheltered housing is not appropriate. Commentaries on contributors' papers expand on the reasons, first that sheltered housing cannot provide the support needed (for example to those with high mental or physical care needs). More importantly, such allocations may actually threaten to negate the provision of preventative care to existing residents. (RH)

The government's announcement earlier in 2006 to adopt and develop the Sure Start for children and families model to cater for socially excluded older people has been well-received. The author of this article examines sheltered housing's contribution towards this new service development - published as "A Sure Start to later life" - and how it may benefit older people, not just the vulnerable. (RH)

ISSN: 13663666

The utility of the Maryland Assisted Living Functional Assessment Tool (MALFA) was considered in terms of predicting successful living in an assisted living facility (ALF). Consideration of this tool's utility was based on the predictive ability of the measure at baseline to explain length of stay and level of care needed for residents (nursing home versus assisted living) over a 5-year period. 76 residents from one ALF in the Baltimore area were tested annually over five years. Those who moved to a nursing home at some point during the five years (47%) had higher mean scores on admission with regard to need for nursing interventions because of cognitive
and psychiatric problems or to perform medical treatments. Illness influenced the number of years in assisted living and accounted for 7% of the variance. The assessment tool provides a wealth of information about the resident and can be used to alert providers to consider those with high scores in sub-scales such as need for monitoring of cognitive and psychiatric problems or need for medical treatment in terms of being a risk for nursing home placement. Future work should consider how to optimally use the MALFA in implementing interventions in assistive living that will prevent decline in areas that seem likely to result in a need for a higher level of care. The whole of me ... : meeting the needs of older lesbians, gay men and bisexuals living in care homes and extra care housing: a resource pack for professionals; by Sally Knocker, Age Concern England - ACE. London: Age Concern England - ACE, 2006, 42 pp.

The majority of care home and housing managers are committed to treating older residents with respect as individuals. However, the reality for many lesbian, gay and bisexual residents is that they feel uneasy about being open. This resource pack is intended principally for registered care home managers and managers of extra care housing and their staff teams, as well as operational and policy managers. The aim is to explore some of the most pressing issues for older lesbians, gay men and bisexuals in care settings. It offers practical and achievable ideas, also examples of good practice. (RH)

A 20/20 vision for housing and care: research report; by Jane Allardice, 20/20 Project (ERoSH; Association of Social Alarm Providers - ASAP; Centre for Sheltered Housing Studies; National Housing Federation); Jane Allardice Communications Ltd.: Electronic format only, 2005, 42 pp (+ executive summary).

The 2020 vision is "a society where people will be able to access and benefit from the housing support, telecare and health services they aspire to, with full knowledge of the options available". Partner organisations indicate the breadth of interest for the 20/20 Project: the Telecare Services Association (formerly ASAP), the Centre for Sheltered Housing Studies (CSHS), ERoSH (the national consortium for sheltered and retirement housing), the National Housing Federation, the Association of Retirement Housing Managers, the Chartered Institute of Housing (CIH), Counsel and Care, Elderly Accommodation Counsel (EAC) and the Federation of Black Housing Organisations. This report comments on only brief coverage of extra care housing and telecare in the Green Paper, "Independence, well-being and choice: a vision for adult social care in Britain" (TSO, 2005); nor did it suggest a statutory duty on agencies to work together on housing strategy. It reports results of a large consultative exercise with stakeholders, covering: responding to changing needs and aspirations; housing choices and extending the options; "future proofing" (designing housing built for people irrespective of age); diversity of communities; dignity and independence; and empowering the housing workforce. Recommendations are made on what these stakeholders - providers, government and local authorities - need to consider in future provision. (RH)

Approaches to 24-hour cover in Abbeyfield supported sheltered houses; by Abbeyfield Society. St Albans: Abbeyfield Society, 2005, 11 pp.

The term "24-hour cover", in the context of this booklet, refers to a method by which residents can be confident that without fail, they can get help at any time of the day or night, by using in-house alarm systems, either to reach staff or to a separate control system that can summon assistance. This booklet gives reasons why Abbeyfield supported sheltered houses (SSH) are seeking to provide 24-hour cover, but noting issues such as the Working Time Regulations, the financial implications of doing so, and a check-list of on-call arrangements. (RH)

Quality of life and quality of outcome are central to policy and practice. This workbook is organised to take specialist housing and care providers through the process of assessing quality of life in particular settings. The workbook contains a set of research instruments to assess the quality of life people have in specialist housing
and care settings and instructions on how to use them. There are five steps in the process, which are covered as follows: preparing and planning; applying the research instruments; the research instruments; analysing the responses; and reflecting, reporting and preparing an action plan for improvement. A better future for supported housing; by Peter Molyneux.
Housing, Care and Support, vol 8, no 1, February 2005, pp 17-20.
The National Housing Federation's initiative, In Business for Neighbourhoods, urges all housing associations to ensure that they focus on users, to diversify funding and manage costs, while working in partnerships with others to serve the whole population of a community or neighbourhood. General-needs housing providers cannot be "in business for neighbourhoods" without meeting the needs of frail older people, care leavers, people recently released from prison, or women fleeing domestic violence. Supported housing is the only part of the housing association sector with a clear and untainted focus on users, the only part with a rigorous focus on costs and efficiency, and the only part developed through partnership, owing everything to partnership. In their report, "In business to support people: the future of supported housing", Julia Unwin and Peter Molyneux argue that supported housing agencies must be allowed to find ways to grow as organisations and to cope with a highly unstable market, if they are to respond effectively to the challenges posed by increasing demand for citizenship and choice. Care homes in the heart of the community: final report of the NAPA Growing with Age project; by Sally Knocker, Barbara Avila, Growing with Age, National Association for Providers of Activities for Older People (NAPA). London: NAPA, 2005, 42 pp.
This report shares the work of the 3-year action research project, Growing with Age, run by the National Association for Providers of Activities for Older People (NAPA). The project was funded by the Big Lottery Fund, and focused on exploring possibilities for greater links between residents of care homes and the communities in which they live. Other aims were: to combat negative images of life in care homes and sheltered housing by encouraging positive exchanges between older residents and members of the local community; and to share and spread ideas for good practice. Care provision in housing with supportive services: the importance of care type, individual characteristics, and care site; by Charles D Phillips, Catherine Hawes.
Housing with supportive services is an important long-term service, but information about care provision to residents in these settings is largely unavailable. The role of individual characteristics versus facility identity in determining how care is provided is completely unexplored. Data from 60 facilities in one US state were used to investigate the degree to which individual characteristics and facility identity determined how much care was provided to residents. Individual characteristics had the predicted impact on the amount of direct care time received by individuals. Care that was dementia oriented, however, was more strongly affected by the identity of the facility than by individual characteristics. These results have important implications for how consumers should think about seeking, policy makers should think about supporting care for those with impaired cognitive status who use housing and cognitive services. City memories: reminiscence as creative therapy; by Chris Joyce.
This paper describes and evaluates a recent innovative project in Liverpool that brought together the skills and creative vision of a major national museums group in partnership with the housing action trust (HAT). “City Memories” created opportunities for older people to take part in reminiscence activities at the museums and in a large extra care housing setting in the community. Training was provided for community leaders, care home managers and care workers, in order to help them to apply some of the ideas in their own work. The project looked at outcomes for older people who participated in terms of increased stimulus and sense of well-being.
There was a special focus on those with conditions such as stroke and dementia. It is hoped that such work will inspire others to put therapeutic reminiscence into practice in their own settings and circumstances, and that it may be possible at some stage to conduct a more systematic study to test the benefits of this approach in relation to measurable health gains. Curtains for care homes?; by Katie Leason.
Community Care, issue 1567, 7 April 2005, pp 32-33.
The government is enamoured with the idea of extra-care housing, sometimes, its seems, to the exclusion of all other options. Even so, care homes still have an important role to play, despite disputes over care standards and fee levels. The author notes that community care minister, Stephen Ladyman's anti-residential care stance is evident in the recent Green Paper, "Independence, well-being and choice" (Cm 6499). Gillian Crosby, Director of the Centre for Policy on Ageing (CPA), while welcoming the development of extra-care housing, believes that good residential care should continue to be available for those who need it. The author suggests that extra-care housing (currently only 20,000 older people) needs to expand quickly if it to become the dominant model, as compared to care homes with about half a million older people. (RH)

The purpose of the workshop was to help scheme managers and residents to: recognise the symptoms of depression; know what help is available; and explore the ways in which sheltered housing can reduce older people's vulnerability to depression, especially through mitigating stress factors and promoting social activity. Workshop sessions and presentations focused on the medical and social models of depression. The workshop was co-hosted by Mary Godfrey, a co-author of "Depression and older people" (Help the Aged, 2004); she provided two vignettes for participants to discuss and to identify obstacles and offer solutions. Explaining about ... sheltered housing and the Single Assessment Process; by Peter Huntbach, Jilly Alexander.
Working with Older People, vol 9, issue 4, December 2005, pp 8-11.
For many professionals within the sheltered housing sector, this is a time of real change and opportunity. The authors explain the benefits to be reaped for residents and staff by connecting health, housing and social care professionals through the Single Assessment Process (SAP). This article outlines how SAP works in practice within the sheltered housing service and where it sits with the assessments and support plans already undertaken. It concludes that sheltered housing providers will have to adapt their working practises to incorporate needs assessments and support plans, as required by Supporting People. To do so will help both residents to be at the centre of the process and establish the role of staff within the whole system of care management. (KJ/RH)

ISSN: 13663666

This annual survey looks at the extra-care housing sector (also known as assisted living, care plus, very sheltered housing). The survey gives an overview of all current aspects of this sector, including Government initiatives and other developments (e.g. Supporting People), and reviews the sector's trends and developments. Models of current extra-care housing are detailed, as is the part that assistive technology plays in such provision.

Despite changes in the nature of supported accommodation services for people with learning disabilities, little progress was made during the 1970s, 1980s and 1990s in tackling unmet need. While the advent of Supporting People has more recently led to an increase in the volume of provision, unmet need continues to be a major concern to people with learning disabilities and their families. There is good reason to believe that, as a result of changes in the demographic profile of people with learning disabilities, changes in expectations and changes in the pattern of informal care, this issue will become substantially more pressing over the next two decades. This paper attempts to estimate the nature and extent of increased need. (RH)

"Fees paid to GPs for services provided to residents of care accommodation for older people - 2000-2001" - an earlier report by ACO (with VOICES and OBFA) - showed that older people in residential care and sheltered housing were being treated differently in different geographic areas. This report describes a programme of work carried out to establish exactly what older people in residential care and sheltered settings want from their general practitioners (GPs). Its findings are presented in the context of the overall policy environment in which care homes operate and in which GPs conduct their business. The report suggests some "hallmarks" for good practice in the provision of healthcare for older people in residential care and sheltered housing. (RH)

Assisted living (AL) is a term applied a wide range of residential facilities for older people in the US, but usually excludes nursing homes providing personal care. The researchers used interviews and observations of the state and care of 2,078 residents in 193 AL facilities across four US states, with follow-up telephone interviews with care providers. Annual mortality and transfer rates were 14.4 and 21.3 per 100 residents respectively. The probability of hospital admission and new or worsening illnesses over a standardised quarter per 100 residents were 12.7 and 22.7. Standardised change in function was notable among those who were transferred or died, but was small for others. Facility characteristics did not generally relate to medical outcomes and transfer, and those that related to functional change were small and occurred across multiple functions. Facilities that were affiliated with another level of care were more likely to transfer; nurse staffing was favourable for hospital admissions but not transfer; and care assistant turnover was protective for mortality. Procedures and outcomes are inconsistent, and effect sizes are small. Thus, practice and policy should not focus narrowly on any one area or restrict the type of care. (RH)

Intermediate care is a set of services which cross existing boundaries, providing care for people who no longer require accommodation and support in hospital, yet are still in need of temporary care to get back to normal living. The author describes facilities provided by Hanover Housing Association's Up & About intermediate care service at two locations. Poppyfields at St Neots in Cambridgeshire, an extracare scheme, works in
partnership with Huntingdonshire Primary Care Trust (PCT). Cotswold and the Vale Primary Care Trust has developed 16 sheltered housing units providing intermediate care at St Peter's Court in Cirencester, Gloucestershire, Hanover’s first Up & About facility. (RH)

As old age becomes an established part of life, disability is an increasingly common experience. Although the overall health profile of older people is improving, the high prevalence of chronic disabling conditions means the numbers of older adults ageing into disability is growing rather dramatically, due to the fact that more disabled people survive into old age and more aged people become disabled. The ageing of the disabled population and the potential their situation portends for ageing advocates and disability activists to address common issues affecting the intersection between formerly disparate populations is highlighted. It is suggested that supportive living environments provide an opportunity for coordinated political action. It is important to understand the changing demographics of disability and the need for supportive living environments. Identifying issues that hinder or buttress efforts to build coalitions between the ageing network and disability community is also imperative. Public policies in the United States serving both populations are reviewed to extend understanding of the benefits and challenges of such approaches. The authors conclude by identifying how efforts to develop cooperative approaches can provide models for other governments to address the needs of their older and disabled populations within their own countries. Sheltered accommodation in the UK is commonly seen as a half-way house between independent community living and long-term care, but little is known about the health and needs of its residents. This study compared the needs of older people living in sheltered housing in two contrasting areas. 51 residents from three inner-city sheltered housing schemes and 87 from three new town schemes were interviewed using the Camberwell Assessment of Need for the Elderly (CANE). They were also asked about their social networks, health, service use, and reasons for moving into sheltered housing. Each unit's facilities, policies and physical layout were evaluated using the Multiphasic Environmental Assessment Procedure (MEAP) and warden interview. 75 out of 138 residents (54%) had one or more unmet need, but the number of unmet needs did not differ between the two areas. Unmet needs were more common in people with activity limitation, mental health problems, or limited social networks. Inner city residents had poorer mental and physical health, but used local resources more and viewed their placement as more successful than those in the new towns. Sheltered housing units should be flexible to meet the variety of needs, and also use residents' strengths and resources. In the new town area, those with restricted social networks may have had higher unmet needs, because they had better access to community resources, such as transport. Sheltered accommodation needs to have better access to local community resources to help prevent residents feeling isolated. (RH)

Organisational commitment is important because of its close links to staff turnover. This study examines the role of organisational culture, job satisfaction and sociodemographic characteristics as predictors of the
organisational commitment of staff in assisted living. Data were collected from 317 staff members in 61 facilities in Maryland, using self-administered questionnaires distributed by a researcher during 1-day visits to each facility. Organisational commitment was measured by the extent of staff identification, involvement and loyalty to the organisation. Organisational culture, job satisfaction and education were strong predictors of commitment, together explaining 58% of the total variance in the dependent variable. Higher levels of organisational commitment were associated with more favourable staff perceptions of organisational culture and greater job satisfaction. In addition, more educated staff members tended to report higher levels of organisational commitment. Other than education, sociodemographic characteristics failed to account for a significant amount of variance in organisational commitment. Because job satisfaction and organisational culture were strong predictors of commitment, interventions aimed at increasing job satisfaction and creating an organisational culture that values and respects staff members could be most effective in producing higher levels of organisational commitment. (RH)
ISSN: 00169013
From: http://www.geron.org

Relationships between religiosity and work-related attitudes were assessed for 182 paraprofessional and 125 professional staff in 61 assisted living facilities in Maryland. Data were collected from staff using self-administered questionnaires. The attitudes examined included job satisfaction, co-worker satisfaction, and organisational commitment. Greater religiosity was found to be associated with higher job satisfaction and greater organisational commitment among paraprofessional staff. When considered together with age, sex and education, religiosity emerged as a significant predictor of organisational commitment for paraprofessional staff. Since lack of commitment predicts staff turnover, these findings have practical implications for administrators who want to increase staff retention. (RH)

Researching older people with dementia in supported housing; by Simon Evans.
Despite calls for greater user involvement in service evaluation and development, the views and experiences of people with dementia are excluded from much research. Reasons include assumptions about levels of awareness, doubts about the validity of accounts, the challenge of informed consent and over-reliance on obtaining views by proxy from formal and informal carers. This paper explores the benefits of directly including the voices of people with dementia in research, and identifies a range of strategies for overcoming the methodological challenges of a more inclusive approach. Examples from a study that aimed to explore the characteristics and suitability of extra care housing from a user perspective illustrate ethical dilemmas and practical challenges, including the role of gatekeeper, gaining informal consent and meeting the specific needs of people with dementia as research participants. Satisfaction with care among community residential care residents; by Michael P Curtis, Anne E B Sales, Jean H Sullivan (et al).
The authors conducted interviews with 176 community residential care (CRC) residents and their providers in Washington State. Logistic regression was used to identify resident and physical characteristics, policies and services, and aggregate resident characteristics associated with satisfaction. Residents had high levels of satisfaction, demonstrating most concern with the facility being able to meet their future needs and food quality. Resident demographics and health status were associated with satisfaction. Contrary to hypotheses, facility type (adult family home and assisted living) was the only facility characteristic strongly associated with satisfaction. Possible explanations include that the relationship between satisfaction and facility characteristics is more complex than expected, as well as significant challenges in measuring satisfaction and facility characteristics. The inconsistent results of previous satisfaction studies do not provide direction for imposition of uniform standards for facility characteristics, if the goal is improved satisfaction. (RH)

The adjustment to a new home; by Debra Dobbs.

This ethnographic study uses grounded theory to explore the meanings of "home" and "care" for residents in an assisted living facility. The narratives of residents and staff in the setting are analysed using the theoretical concepts of the abstract and concrete meanings of home as outlined by Groger (1995). This study finds that unlike a nursing home, an assisted living setting provides the continuity of concrete meanings of home (the physical features and aesthetic appearance), but does not provide the abstract meanings of home. The findings also reveal that residents have definitions of care contrary to those typically given by staff. (KJ/RH)

Assisted living in BC: a gradually developing 'new era' regulatory process; by Charmaine Spencer, Gerontology Research Centre, Simon Fraser University, Vancouver.

On May 14 2004, new legislation came into force in British Columbia (BC) governing assisted living residents and establishing a regulatory scheme for them. The province has experienced major growth in the development of such facilities over recent years; and a self-regulatory environment alone has been unable to maintain high standards in assisted living and assure the well-being of residents, Such is illustrated by examples in the the United States, where there is no standardized regulation of the industry. The article explains BC's regulatory framework, which aims to achieve basic standards and guidelines for assisted living facilities. The application and registration process, including the role of the Register, is described, as well as the cost, health and safety issues. Service delivery is also addressed: there will be a need to be vigilant against creating a gap between what is promoted to the public and what services are actually offered. The issues involved here are: emergencies and how they are dealt with by the service; the devolution of responsibilities by the authorities involved; coverage of the scheme; and finally, tenancy protection for those in assisted living. Assistive technology in extra care housing; by Nigel King, Housing Learning and Improvement Network, Health and Social Care Change Agent Team, Department of Health - DH.: Department of Health - DH (Electronic format only), 20 February 2004, 20 pp (Factsheet no 5).

Assistive technology (AT) can play a part in supporting people in extra care housing. In this factsheet, Nigel King of the Housing and Support Partnership summarises the commonest applications of AT, gives examples, and provides details on where to find out more. (RH)

The cultural construction of the assisted living consumer is discussed. Based on theories of consumer studies, this article focuses on organisational strategies employed by assisted living practitioners to promote consumer choice and independence while mediating potential risks. Data include field notes, participation in manager training programmes, and interviews with residents and family members during a 22-month study of three assisted living facilities in Oregon. Consumer discourse is evident in the state rules, manager training programmes, organisational practices, and institutional belief in specific consumer demands such as independence and choice. Personal care is a complex consumer “good”, further complicated by residents with cognitive impairments, family demands, payments sources and the very novelty of the assisted living philosophy. Benefits and pitfalls are discussed, based on the use of consumer discourse that represents older people as active consumers, rather than recipients, of long-term care services. (RH)

This pilot study randomly selected 4 nursing homes, five assisted living facilities, and 16 family care homes from a South Central state in the US. In-person and telephone interviews were conducted with administrators and resident-family-staff triads (n=79) to gather information on setting, resident functional status, family involvement, sociodemographic context and resident psychosocial status. Results indicated that type of facility, resident health conditions, resident race, and family orientation were significantly correlated with dimensions of resident psychosocial status. The findings suggest that multiple informants are necessary to determine the processes that lead to residents’ quality of life, and that consideration of diverse settings offer greater insight into how positive resident adaptation is achieved in long-term care. Options for older patients who can no longer remain independent are limited. Most choices involve assisted living, 24-hour caregivers, or nursing homes. For those who have the means to afford assisted living or nursing homes, “cruise ship care” is proposed. Travelling alongside traditional tourists, groups of older people could live on cruise ships for extended periods of time. Cruise ships are similar to assisted living facilities in the amenities provided and costs per month, for example. This article examines the needs of older people in assisted living facilities, and explores the feasibility of cruise ship care in answering those needs. Similarities in care and in the monetary costs of both options are defined. A decision tree with selections for non-independent care was created using cruise ship care as an alternative. Using a Markov model over 20 years, a representative cost-effectiveness analysis was performed that showed that cruises were priced similarly to assisted living centres and were more efficacious. Proposed ways in which cruise companies could further accommodate the needs of older people interested in this option are also suggested. Implementation of cruise ship care on the individual basis is also presented. If this option succeeds, older people could have a much more enjoyable experience, and look forward to the time when they become less independent. (RH)

The assisted living facility (ALF) is the fastest growing institutional long-term care alternative for frail older people in the US. This analysis assesses the extent to which older people with physical and cognitive disabilities and health care needs occupy ALFs in the US. The six studies reviewed had several methodological weaknesses, resulting in different statistical populations of ALFs, samples with very different numerical and attribute properties, and findings based on disparate indicators. The older residents of ALFs were less physically and cognitively impaired than those in nursing homes. ALF facilities were more likely to admit or retain frail older people when they had relatively minor or less serious physical or cognitive impairment or health care needs. ALFs are found to be an extraordinarily diverse shelter and care alternative: their residents can include very frail...
older people with serious chronic health problems. Average duration of stays may be as long as 3 years. It is suggested that researchers need to conduct more carefully executed studies with replicable methodologies that produce unbiased and generalisable findings. (RH)

Elixir of life: [a retirement village in Staffordshire]; by Miriam Bernard.
Community Care, no 1553, 16 December 2004, pp 36-37.
The author reports on the findings of a 3-year participatory action research study, "New lifestyles in old age: health, identity and well-being in Berryhill Retirement Village", carried out with colleagues Bernadette Bartlam, Simon Biggs and Julius Sim at Keele University. The study explores what it is like to live and work in the village, which was developed by the Extra-Care Charitable Trust and Touchstone Housing Association. Funded by the Community Fund (now the New Big Lottery Fund), the study suggests that Berryhill works well for many. However, there were particular challenges for all involved. (RH)

Extra care housing: remodelling for the future; by Tony Clarke.
Housing, Care and Support, vol 7, no 4, December 2004, pp 9-12.
As our population grows older and we see a new generation of older people demand services tailored for individuals, service providers have to be increasingly responsive in providing what people want and need, rather than what organisations decide to provide. The growth of Extra Care housing forms a key part of this change, offering a comprehensive housing and care service which aims to meet a range of needs in one local resource. Much of the new provision of Extra Care housing is developed from existing sheltered housing schemes. Remodelling existing schemes brings many challenges, but has significant benefits for both individuals and local communities. (RH)

Extra care sheltered housing is being strongly promoted by central government and the Housing Corporation as a preferred model for meeting older people's housing needs. This conference examined extra care sheltered housing at an operational level, how it works, and how we might learn from the experiences of others: case studies were given on six schemes in East and West Sussex. How 'community aware' is your care setting?: [checklists]; by Sally Knocker, Barbara Avila, M Pilar Roman-Rojo, Growing with Age, National Association for Providers of Activities for Older People (NAPA). London: NAPA, 2004, 7 pp.
As part of the NAPA Growing with Age project, three checklists have been compiled as ways of helping discuss possible activities with residents and their relatives and as an aid to the care planning and review process. The checklists could also be used to provide evidence for care inspectors about how the home is meeting Standard 13 of "Care homes for older people: national minimum standards". The checklists are: Getting out and about; Bringing the outside in; and Involving local colleges and community groups. (RH)

Internet access and online services for older people in sheltered housing; by Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation - JRF, February 2004, 4 pp.
Government policy initiatives aim to encourage online delivery of government information and social services, and to promote take-up of internet access by all residents. Online delivery of aspects of social care and health services will make it possible to access these services via the Internet. These findings outline the results of a small scale study by Maria Sourbati, conducted with the support of the Joseph Rowntree Foundation (JRF), in which she explored how older people living in sheltered housing use the Internet, and how they and their carers feel about online service access. The full report of her study, "Internet use in sheltered housing: older people's access to new media and online service delivery", is published by JRF as part of its series, "The digital age: opportunity or exclusion?" (available from York Publishing Services). (RH)
Internet use in sheltered housing: older people’s access to new media and online service delivery; by Maria Sourbati, Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation - JRF, 2004, 33 pp (The digital age: opportunity or exclusion?).

The likely impact of e-government on community care and housing-related support is considered in this small-scale study conducted with the support of the Joseph Rowntree Foundation (JRF). Based on a study of media use in two sheltered accommodation sites in north London - one with internet provision and digital television, and one without - this report explores the use of e-services such as tele-shopping and banking, and highlights the potential of digital television and the Internet for delivering social care to older people in their homes. The report presents the perspectives of older people, care support staff and management, including their attitudes to ‘old’ media (television and telephone). Issues such as the gap between older people's current skill level and the level needed for internet access, and online delivery of services as a substitute for human contact, are highlighted. (RH)

Managing decline in assisted living: the key to aging in place; by Mary M Ball, Molly M Perkins, Frank J Whittington (et al).

Five assisted living facilities (ALFs) in Georgia, US (where they are termed "personal care homes") were studied for 1 year using qualitative methods including: participant observation; informal and in-depth interviewing of providers, residents and residents' families; and review of resident and facility records. Analysis was conducted by grounded theory approach. The ability of residents to remain in assisted living was principally a function of the "fit" between the capacity of both residents and facilities to manage decline. Multiple community facility and resident factors influenced the capacity to manage decline, and resident-facility fit was both an outcome and an influence on the decline management process.Residents and facility risk was also an intervening factor and a consequence of decline management. Findings point to the complexity of ageing in place in ALFs and the need for a co-ordinated effort by facilities, residents and families in managing decline. Residents also need to be well-informed about their own needs and the capacity of the facility to meet them. (RH)

In Britain, purpose-built retirement villages are attracting increasing attention, reflecting a recognition that older people want a greater say in where and how they live, and the care and support they might need in the future. This report explores what it is like to live and work in the Berryhill Retirement Village in Stoke-on-Trent, which has been developed by the ExtraCare Charitable Trust and the Touchstone Housing Association. A feature of the research was its multi-method participatory approach, involving the 159 residents aged 55+, as well as staff, families and other stakeholders. The report examines how older people are enabled to play a part in actively creating a new retirement community lifestyle for themselves, and are encouraged to participate and be involved in village life. Quantitative and qualitative data are used to explore and understand residents' health, well-being, quality of life and life satisfaction, and to meet their diverse health needs. The possibility of maintaining a positive identity in later life is also examined. The report draws out wider policy and practice lessons for those who might be considering developing similar schemes. (RH)

"Not everything that can be counted counts and not everything that counts can be counted": towards a critical exploration of modes of satisfaction measurement in sheltered housing; by Mark Foord, Julie Savory, Dianne Sodhi.

Health & Social Care in the Community, vol 12, no 2, March 2004, pp 126-133.

This paper reflects on a research project funded by a consortium of leading sheltered housing (SH) providers and their regulatory body, the Housing Corporation. The project aimed to ascertain which aspects of SH older people perceived to be central to their satisfaction and the methods they judged most appropriate to measuring this. The authors outline the key policy developments (specifically the development of performance measurement regimes), and changes in the nature of SH, which are driving providers to re-evaluate how they measure user satisfaction. They discuss the aims of the project, its methodology and findings, and conclude by raising critical questions about the process of measuring satisfaction within an increasingly managerialised housing system. They argue that this favours standardised methods of information gathering (such as questionnaires) rather than engaging with clients, in order to develop methods and systems capable of eliciting qualitative issues of concern to them. The authors believe that their conclusions are applicable to health and social care provision, where there are similar tensions around performance measurement and user satisfaction.

Policy and research issues for small assisted living facilities; by Leslie A Morgan, J Kevin Eckert, Ann L Gruber-Baldini (et al).

This analysis compares smaller and larger Assisted Living (AL) facilities in four US states to determine whether extant measures of four key concepts, used to distinguish the AL sector, give advantage to larger facilities. Quantitative comparisons predominantly show differences favourable to larger facilities. Qualitative information, on the other hand, raises the prospect that current measures overlook beneficial aspects of smaller facilities. If small facilities are included under the AL banner, both policy provisions and quality assessment must be carefully crafted to avoid placing small homes in funding and oversight jeopardy as AL develops.

The extent to which dwellings intended for owner occupation within private retirement housing developments were being privately rented is examined in the context of the Title Conditions (Scotland) Act 2003. The research therefore established the extent to which provisions of this new legislation, aimed at safeguarding the position of owner occupiers in such developments, could be undermined. The research responded to concerns raised by SHROC (the Sheltered Housing and Retirement Housing Owners Confederation) about the poor practices of some managers and developers of private retirement housing.

Reaching black and minority ethnic elders in sheltered and retirement housing: a project case study; by Baldwin Davis, Age Concern England - ACE.

In October 2002, Age Concern England's Advice, Information and Mediation Service for Retirement Housing (AIMS) launched a multi-lingual information and advice line for black and minority ethnic (BME) older people living in sheltered or retirement housing. The project's manager outlines ways in which potential clients could be helped, given the initial low take-up of the service. AIMS has a website (http://www.ageconcern.org.uk/aims).
Supported housing and the law: the fractures in the housing and support partnership; by Belinda Schwehr. Housing, Care and Support, vol 7, no 2, June 2004, pp 26-31.

Government policy for vulnerable people has long been to encourage as many people as possible out of care homes and into supported accommodation. This article seeks to explore some of the unforeseen legal difficulties arising out of this trend. Two have already become very apparent: one, where the question of ordinary residence arises, with regard to which authority is liable for the purchase of additional domiciliary care; and the other, for residents who may be thought to lack capacity to make a contract for the tenancy which underpins the whole arrangement. The article begins by describing two quite different arrangements for providing accommodation and support. (RH)

The Supporting People programme offers vulnerable people the opportunity to improve their quality of life by enabling them to live in the community. These Notes are essentially shorter versions of the information to be found in “Supporting people: policy into practice”, originally issued by the Department of the Environment, Transport and the Regions (DETR) in 2001, and to which the reader is referred for more information. Note 1 is an overview of the Supporting People programme. Note 2 outlines the key stages in drawing up the strategy, while Note 3 covers the team, and Note 4 the strategy. Note 5 deals with cross-authority arrangements; Note 6, Reviews and managing the changeover; Note 7, Purchasing support services; Note 8 Quality and monitoring; Note 9, Services for older people; and Note 10, Meeting black and minority ethnic needs. Services for older people form a major part of the Supporting People programme, in terms of numbers of people receiving services, and this documentation outlines how services will be delivered. (RH)

The authors present results of a questionnaire inquiring into the use and usefulness of resident satisfaction surveys, which was sent to all 363 nursing homes and 152 assisted living facilities in New Jersey (NJ) in autumn 2000. Resident satisfaction surveys were found to be used in 86% of nursing homes and 85% of assisted living facilities. However, the satisfaction instruments used vary greatly, and appear to have been developed largely on an ad hoc basis with little attention to testing of validity or psychometric properties. Standardisation is needed. Moreover, the uses of satisfaction information were limited and primarily aimed at administrative goals rather than at improving quality of care. These factors may restrict the potential benefits of such information. (RH)

User involvement in supported housing: more than just ticking the box; by Marc Mordey, Jonathan Crutchfield. Housing, Care and Support, vol 7, no 1, February 2004, pp 7-10.

Service users' involvement was one of the supplementary objectives in the Supporting People monitoring framework. This article looks at what it might mean in practice. In common with other providers of support services, Southern Focus Trust (SFT) has seized the opportunity presented by the framework to review its policies and practices. A report for SFT, "Sharing the driving", describes the progress made by a major regional provider, with some lessons that may be of wider value. (RH)

2003

Interviews with 1,215 assisted living and nursing home residents and family members in Oregon compared assisted living residents and their family proxies with their nursing home counterparts regarding preferences for long-term care settings and circumstances and decisions surrounding their move. Analyses showed some differences between reported preferences by assisted living and nursing home groups, with the former placing
more emphasis on control over private spaces and the latter on rehabilitation. There were also similarities, however, especially in the views of residents themselves rather than those of their family proxies. For example, high value given by both groups to help with care from staff, decisions on how much care, and private rooms indicate policy planners and providers should take into account such preferences and develop a hybrid of positively valued features in both assisted living and nursing homes. (RH)

ISSN: 07334648

Assisted living and nursing homes: apples and oranges?; by Sheryl Zimmerman, Ann L Gruber-Baldini, Philip D Sloane (et al).
Multivariate analyses of data derived from the US Collaborative Study of Long-Term Care (CS-LTC), a four-state study of 193 residential care / assisted living (RC/AL) and 40 nursing homes (NHs), examined differences in 10 processes of care measures based on facility size. Differences found in process of care and resident characteristics by facility type highlight the importance of considering: the adequacy of existing process measures for evaluating smaller facilities; resident case-mix when comparing facility types and outcomes; and complexity of understanding the implication of the process of care, given the importance of person-environment fit. (RH)

Assisted-living for older people in Israel: market control or government regulation?; by Israel Doron, Ernie Lightman.
This paper examines whether formal legal regulation is the optimal policy to protect the needs and rights of frail residents, while respecting the legitimate interests of others, such as operators and owners. It presents the case for and against direct legal regulation (as in institutions), and suggests that no overall a priori assessment is possible. The analysis is based on the case of Israel, where proposed regulations for assisted living have been introduced but not implemented. After a brief history of assisted living in Israel - its recent dramatic growth and why this occurred - the paper concludes that formal direct regulation is not the best route to follow, but that the better course would be to develop totally new "combined" regulatory legislation. This would define the rights of residents and encourage self-regulation alongside minimal and measured mechanisms of deterrence. Such an approach could promote the continued development of the assisted living industry in Israel and elsewhere, while guaranteeing that the rights, needs and dignity of older residents are protected. (KJ/RH)

ISSN: 0144686X

Becoming "at home" in assisted living residences: exploring place integration processes; by Malcolm P Cutchin, Steven V Owen, Pei-Fen J Chang.
The roles are explored of place attachment, social involvement, place valuation and individual characteristics in the process of becoming at home in assisted living residences. A sample of 297 current assisted living residents in four states (Minnesota, New Jersey, Oregon and Texas) completed questionnaires, data from which were used to estimate a structural equation model to explain becoming at home. Place attachment to town and community is a necessary but not significant explainer of older people's process of becoming at home. Non-family social involvement plays a pivotal role through which place attachment works to explain becoming at home. Both place valuation and non-family social involvement exhibit direct positive effects on the outcome. The findings support a transactional interpretation of assisted living as home. The relationship between place attachment to one's community and full integration into assisted living is more complex than currently acknowledged. (RH)

Private sheltered housing helps older people to engage with the local community and promotes independent living. However, there is a shortage of such housing in the UK. This report sets out the findings of a study of the opinions of some 1,500 current and prospective residents of private sheltered housing - their priorities, levels of independence, health, happiness and contribution to their local community and the wider economy. It presents the personal, economic and social cases for private sheltered housing, that ensure appropriate housing choice and a good quality of life. (RH)

Assisted living facilities (ALFs) offer a level of care between independent living and nursing homes. Researchers have begun to explore quality of life issues concerning residents of ALFs. Considerable research suggest that religion is positively associated with both emotional and physical health. This study examines how residents use religious practices to cope with the challenges of life in ALFs. Qualitative analysis of interview data from 55 residents of ALFs revealed a variety of religious practices, such as prayer, church attendance, and Bible reading. Most residents deemed religion important and reported that religious practices provided a framework for coping with problems. Six ways emerged whereby residents used religion as a coping mechanism: to maintain continuity with their previous lives; to obtain relief from physical or emotional pain; to provide a framework for socialization; to develop courage; to maintain a purpose for their lives; and to prepare for death. Suggestions for enhancing the quality and variety of religious activities within ALFs are offered. (KJ/RH)

The effect of increasing the level of physiotherapy services in two units of sheltered housing in Sweden was studied. The intervention unit received 20 hours and the control 2 hours of physiotherapy services per week. Physiotherapy and occupational therapy records were reviewed before and during the project. Physiotherapists also kept extended documentation over an 11 month period. There was a significant increase in the number of patients receiving physiotherapy and occupational therapy within both units. No significant differences between the units were found for the number of patients receiving physiotherapy. The number of patients receiving occupational therapy differed significantly between units before as well as during the intervention. Primarily care assistants and auxiliary nurses initiate contact with the physiotherapists mainly for patient-orientated errands. 50% of the instructions given by the physiotherapists at the 20-hour unit related to movement-oriented activities of daily living (ADLs). At the 2-hour unit, 52% of instructions were programme-orientated. (RH)

Within medium-sized sheltered housing schemes, there are likely to be five or six deaths in the course of a year. This workshop considered how grief can be managed within a small community. Speakers used their academic research and/or practice to describe approaches to death and its effect on staff and on the peer group; the ethnic dimension of death; and the behaviour of people affected by a death. Workshops sessions discussed problems that participants had personally faced and tried to resolve, leading to suggestions for good practice. (RH)

A matter of preference: [summary of survey findings on supported living environments]; by Vanessa Burholt, Gill Windle.
A survey of older people's preferences for supported living environments (sheltered housing, extra care sheltered housing, and residential care) reveals that we make too many assumptions about what older people value in their lives. The authors summarise the findings of their research conducted at the Centre for Social Policy Research and Development (CSPRD) at the University of Wales Bangor, and published as “Retaining independence and autonomy: older people's preferences for specialised housing”. Their article focuses on the negative depiction of residential care; the importance of control and privacy; and the value placed on domestic services. They conclude on the need for more focus to be placed on the way services are packaged, that one package of care for supported housing will not suit all, and that older people need to be taken seriously as consumers. (RH)

From: http://www.basw.co.uk

Monitoring the wellbeing of residents has always been one of the prime roles of the sheltered housing scheme manager. However, now that many scheme managers are becoming non-resident and off-site more often, these roles are changing. With the availability of electronic modes of surveillance, there would seem to be less time available for the more personal modes of monitoring. Given that “supervision and monitoring of health” is an important element of the Supporting People policy, how might sheltered housing fulfil the task of monitoring well-being? To answer this, the Workshop heard presentations on Supporting People, the “ring-round” (or morning call to residents); assistive technology; record keeping; and residents’ views. Good practice points emerging from workshop groups are summarised. (RH)

A national survey of assisted living facilities; by Catherine Hawes, Charles D Phillips, Miriam Rose (et al).
During the 1990s, assisted living was the most rapidly growing form of housing for older people in the US. This study uses a multistage sample design to produce nationally representative estimates for the ALF industry. In 1998, there were an estimated 11,459 ALFs in the US, with 611,300 beds and 521,500 residents. Nearly 60% offered a combination of low services and low or minimal privacy, whereas only 11% offered relatively high services and high privacy. 73% of the resident rooms or apartments were private. Ageing in place was limited by discharge policies in most ALFs for residents who needed help with transfers, had moderate to severe cognitive impairment, had any behavioural symptoms, or needed nursing care. The industry is largely private pay and unaffordable for those aged 75+ on low or moderate income, unless they use assets as well as income to pay. ALFs differ widely in ownership, size, policies, and the degree to which they manifest the philosophy of assisted living. This diversity represents a challenge for consumers in terms of selecting an appropriate facility and for policy makers in terms of deciding what role they want assisted living to play in long-term care. (RH)

Predictors of family involvement in residential long-term care; by Joseph E Gaugler, Keith A Anderson, Corinne R Leach.
While much of the gerontological literature emphasises the institutionalisation of an older person as an endpoint of family care, research has emerged illustrating the continued involvement of family members. The purpose of the present study was to determine how resident setting, family context, resident and staff background, and resident function influence the provision of family involvement in three long-term care environments: nursing homes, assisted living facilities, and family care homes. 5 nursing homes, 5 assisted living facilities and 16 family care homes and 112 residents were randomly selected in the state of Kentucky. Results showed that type of facility was less important in accounting for different dimensions of family involvement than family context, family orientation of facilities, or resident need. The findings demonstrate the complex process of family involvement across the long-term care landscape, and have several research and practice implications for the facilitation of family integration in residential long-term care. The guidance to which Age Concern England (ACE) is responding broadly explains where registration as a care home is required, and how to distinguish care homes from supported housing of various kinds. It specifically discusses whether very sheltered housing or extra care should be registered as care homes under the Care Standards Act 2000, based on the requirement that registration is required where the provision of personal care is made within an establishment. While ACE welcomes the intention to promote safety in care service provision, there is concern that the proposals could limit the future provision and sustainability of models of housing care that aim to enhance older people's independence. Combining reminiscence with journal writing to promote greater life satisfaction in an assisted-living community; by Lynda M Kelly, Pearl M Mosher-Ashley.

The Leave-A-Legacy Program at Alterra Wynwood in Leominster, Massachusetts is an example of a successfully emergent, multi-faceted reminiscence and writing programme within an assisted-living community. A group of residents meets voluntarily once a month, along with a facilitator, to read aloud from their diaries, to write and to reminisce. The enthusiastic facilitator contributes greatly to the programme's success, by encouraging members to translate their newly recalled memories into a diary where they can be clearly organised. Thus, these stories and memories will be available to read by later generations. These therapeutic reminiscence sessions enhance participants' social relations and improve their memory by sharing personal stories from their youth. Other benefits from the writing programme include reduced anxiety and a capability to boost one's immune system. (RH)

The Country Close enquiry: some issues raised; by Sue Garwood.

An escalating situation at one of Hanover Housing Association's extraCare schemes resulted in an abuse enquiry. This article sketches the situation and the action taken. Two key points emerge. First, in some circumstances, social services departments (SSDs) may opt not to get involved in situations of alleged abuse. Second, use of the term 'abuse' may sometimes be counterproductive. To protect identities, the names of the establishment and those involved have been changed. (RH)

Critical incidents in the lives of elders with a disability: factors leading to institutional placement; by John B Doherty, Kevin L DeWeaver.
The process by which older people with disabilities are forced to relocate from their homes to congregate living facilities - in this instance sheltered housing or nursing homes - is of critical societal importance. This article is a descriptive exploration of the lived experiences of 41 Americans aged 60+ who made such a transition. The social work profession serves the most vulnerable members of society. This research should help social workers to better understand this vulnerable population, and the personal, professional and policy implications that stem from such research. (RH)

Domestic spaces: uses and meanings in the daily lives of older people; by John Percival.
The everyday routines of older people are examined, and their implications for older people's uses and perceptions of domestic spaces in both mainstream and sheltered housing settings. The paper draws from qualitative data collected during a large scale survey of the housing and support needs of older people, and specifically the responses of 60 informants to personal interviews. The findings are that domestic spaces have a significant influence on the scope that older people have to retain a sense of self-determination. It is shown that environmental defects - such as poorly configured domestic spaces - have consequences for older people's sense
of continuity and choice. Thus, domestic spaces are living spaces that embody personal and family-oriented priorities. It is suggested that older people require adequate, accessible and personalised domestic spaces in order to facilitate three important objectives: routines, responsibilities and reflection. (KJ/RH)

Interactions of behavior and environment as contributing factors in the discharge of residents with dementia from assisted living facilities; by Myra A Aud.
In this exploratory study, administrators of 14 assisted living facilities in Missouri were asked to describe resident behaviours and other issues that contributed to their decisions to discharge residents with dementia from their assisted living facilities to skilled nursing facilities. Whilst resident behaviours themselves were factors influencing discharge, the interaction of those behaviours with the assisted living facility's environment also influenced the decision to consider discharge to a skilled nursing facility. Croner Care Home Manager special report, issue 38, 10 April 2002, 8 pp.
There remain significant differences between sheltered housing and care homes, but the gap is narrowing. The best sheltered housing schemes appear to have taken steps to preserve the autonomy of their residents. In this special report, the author discusses some lessons that care home managers can learn from sheltered housing schemes. (RH)

Patterns in functioning among residents of an affordable assisted living housing facility; by Stephanie J Fonda, Elizabeth C Clipp, George L Maddox (et al).
The context for this research was new, affordable assisted living housing (ALH, i.e. sheltered housing) for low-income people in North Carolina. ALH residents' functional patterns were compared to those with similarly low-incomes living in the community. Functioning was defined as the ability to perform activities of daily living (ADLs) and instrumental activities of daily living (IADLs), and respondents' competing risks such as death and institutionalisation. Comparison samples were selected from the Health and Retirement Study (HRS) and the Asset and Dynamics Among the Oldest Old (AHEAD) study. The results indicate that ALH residents' patterns were generally similar and in some ways better than those of community-dwelling respondents. For example, they were no different (statistically) in terms of improvement, decline and death, but they were more likely to have stable high functioning. (RH)

Promoting independence: an analysis of assisted living facility marketing materials; by Paula C Carder.
The content of marketing materials published by assisted living facilities (ALFs) in Oregon was examined. The aims included comparing what is required by the state rules governing ALFs to what is described in the materials. The focus was on the organisational principles of assisted living, services and fees, and residency criteria; identifying content on the negative consequences of ageing; and reviewing changes in marketing materials over a 4-year period. Marketing materials for 63 ALFs in Oregon as of August 1996 were collected in 1997 and again in 2000. The dominant organisational principle at both times was supporting residence “independence”. Most of the ALFs tackle issues such as incontinence and cognitive impairment in their marketing materials. Although most ALFs revised these materials between 1997 and 2000, most of the changes were cosmetic rather than content oriented. One issue notably lacking from these materials was descriptions of residency criteria. (RH)

The Code of Practice promotes and ensures good practice through setting standards and values for the sheltered housing service within the context of the Government's strategic framework for services for older people. Other aspects covered are: developing a common framework for delivering quality, consistency and a professional service; promoting accountability, professional standards and attitudes in service delivery; and acting as a foundation on which organisations can evaluate, build and continuously improve good practice. Sheltered housing and the resettlement of older homeless people: briefing paper on a report for Help the Aged/hact - by Professor Peter Lloyd, School of Social Sciences, University of Sussex, Brighton BN1 9SN.

Traditional demand for sheltered housing is declining, and new lettings are being made, typically to younger male tenants with histories of homelessness and/or other needs arising from alcohol use, mental health problems, learning disability and past offending. This briefing outlines the findings of 'Sheltered housing and the resettlement of older homeless people', based on research and development work conducted in 2001-2002 by the Manchester-based Older Homelessness Development Project with funding from the Help the Aged/hact Older Homelessness Programme. The research comprises: a review of the literature, research, policy and initiatives; a survey of English Churches Housing Group's (ECHG) 21 sheltered housing schemes in north-west England; interviews and focus groups with resettlement workers and staff from registered social landlords (RSLs); and a review of mainstream and specialist models of sheltered accommodation in England, Wales and the US that provide temporary and permanent accommodation to older homeless people. The report makes recommendations on how the sheltered housing sector might meet the needs of this group more effectively.

Social networks and health of older people living in sheltered housing; by E M Field, M H Walker, M W Orrell (et al).
87 residents from three sheltered accommodation schemes for people aged 60+ in Harlow, Essex, were interviewed about their physical and mental health, social networks, social support, decisions to move in, and how they found living in sheltered housing. 24% had a diagnosis of depression, and 8% dementia, but few had ever seen a mental health professional. More than half (55%) had clinically significant levels of activity limitation; 37% had significant somatic symptoms. Despite provision of glasses, 37% could not see satisfactorily, and 23% could not hear adequately. Locally integrated social networks were most common (41%). Residents with a private network (16%) were more likely than those with a locally integrated network to have significant activity limitation, and often reported being lonely. There were no differences between network types in levels of depression or dementia. Poor health of a person or spouse was the most common reason for moving to sheltered housing, followed by problems with their old home no longer being suitable. Most were happy living in sheltered accommodation. Many made use of the "sheltered" features such as the common room, the communal laundry, the warden and the alarm. A minority of residents were lonely and a few were unhappy with sheltered accommodation. (RH)

Time use by frail older people in different care settings; by Rachel A Pruchno, Miriam S Rose.
The way in which time is used is an important aspect of the quality of life in long-term care settings. Time budget data for a 24-hour period were contrasted for 123 people living in a nursing home, in an assisted living facility, or in the community with home health services. Results indicate that frail older people largely spend their days alone and at home. Obligatory activities account for 38.6% of the day, whereas discretionary activities account for 59.7%. Time spent in activities varies as a function of personal characteristics, environmental context and social context. Although there are differences across these settings, there are also striking similarities, particularly with respect to social context and satisfaction with the day. These data suggest that there is no one optimal living environment for frail older people, and that traditional long-term care environments may be preferable for some. (KJ/RH)

Visiting in care homes: the experiences of older volunteers; by Jan Reed, Martin Jewitt.
A study was conducted to investigate the effect of volunteer visiting schemes on both volunteers and residents in residential and sheltered accommodation. Volunteers - themselves older people - visited people in residential care as part of a befriending scheme on a relatively informal basis. Individuals volunteering were already part of an existing volunteer network recruited and managed by North Tyneside Age Concern. Volunteers were invited to participate either as a result of their experience of volunteering, or by expressing a desire to join the programme. It was anticipated that this volunteering activity could be difficult and complex, and so the study explored the experiences of volunteers through interviews. Developing a relationship with residents was not always easy, and often required a high level of interpersonal skills and commitment which necessitated some support from scheme co-ordinators. (RH)

In April 2001, Sir Patrick Brown KCB was commissioned by the Confederation of British Service and Ex-Service Organisations (COBSEO) to look ahead for the next twenty years to assess how the world in which the ex-Service charities work would have changed. This study considers what changes might be needed to the structure, policies and practices of the charities, in order that the future beneficiaries might be best served.
