Savings and Investments in older age

July 2019
The Centre for Policy on Ageing’s selected readings are drawn from material held on the CPA Ageinfo database of ageing and older age.

All items are held by the CPA library and information service, which is open to the public by appointment.

Photocopies may be ordered where copyright laws permit.

Policymakers around the world are concerned that workers are not saving enough for retirement. One reason is that, in some countries, many workers do not have an employer-based retirement plan. For example, at any given time, around half of private sector employees in the United States do not have a plan and, as recently as 2012, the coverage rate in the United Kingdom had fallen to just one in three. Since relatively few people save for retirement outside of employer plans, those without a plan are at greater risk of being unable to maintain their pre-retirement standard of living in retirement. To address this coverage gap, one option gaining traction is requiring some or all employers to enrol their workers in a plan automatically, with the worker allowed to opt out. California, Connecticut, Illinois, Maryland and Oregon have all enacted such policies, while Germany, Ireland and Poland are actively considering them. So far, however, the United Kingdom is the only country to have completed the nationwide rollout of a policy that requires all private sector employers to auto-enrol their workers in a retirement plan. The UK experience provides a unique opportunity to evaluate the effectiveness of such a wide-scale policy on plan participation and saving. This brief summarises the results of two recent studies on the UK reform. It provides background on the UK reform; and assesses the effects of auto-enrolment on participation at medium and large employers and, separately, at small employers. It compares UK participation to US participation; looks at how auto-enrolment affects UK contribution rates; and considers how “re-enrolling” workers affects retirement plan participation. It concludes that the UK reform has substantially increased participation rates - to about 90 percent at medium and large employers, and 70 percent at small employers. Although most of the increase is among employees making minimum default contributions, the share of employees contributing at higher rates has also risen significantly as a result of the policy. The authors (from the Institute for Fuscral Studies - IFS) have used data from the Annual Survey of Hours and Earnings (Office for National Statistics, ONS). (RH)

Women millennials' perceptions of pension savings through the use of autoenrollment in the UK pension system; by Liam Foster, Martin Henegham, Dineli Wijeratne.: Taylor and Francis, 2019.
Journal of Women and Aging, [vol 30, pre-publication], 2019.

There has been concern about younger people - women in particular - not saving enough for retirement and how to encourage them further with saving. Partly funded by the Fawcett Society in association with Scottish Widows, this study uses 40 semistructured interviews and a focus group to explore female millennials' attitudes and motivations toward pension saving and automatic enrolment. The findings show that although the introduction of auto-enrolment pensions is generally positively received, pensions knowledge is still limited, and this intensifies the risk of undersaving for retirement among millennial women, particularly given women's diverse work histories. This article is partly based on work from COST Action IS1409, Gender and health impacts of policies extending working life in western countries, supported by COST (European Cooperation in Science and Technology). Previous research unequivocally shows that immigrants are less successful in the labour market than the native-born population. However, little is known about whether ethnic inequality persists after retirement. The authors use data on 16 Western European countries from the European Union Statistics on Income and Living Conditions (EU-SILC, 2004-2013) to provide the first comparative study of ethnic inequalities among the population aged 65 and older. The focus is on the retirement income gap (RIG) between immigrants from non-European Union countries, magnitude of which is compared with country differences in welfare state arrangements. Ethnic inequality after retirement is substantial: after adjusting for key characteristics including age, education and occupational status, the average immigrant penalty across the 16 countries is 28 per cent for men and 29 per cent for women. Country-level regressions show that income gaps are smaller in countries where the pension system is more redistributive. The authors also find that easy access to long-term residence is associated with larger RIGs, at least for men. There is no clear evidence that immigrants' access to social
security programmes, welfare state transfers to working-age households, or the strictness of employment protection legislation affect the size of the RIG. (RH)

This paper explores areas of challenge for visually impaired older people in managing personal finances, and critically appraises current structures available in financial institutions for equal access to financial services. The paper intends to create understanding of the drawbacks to financial inclusion from the perspectives and experiences of older people with vision impairment in Nigeria, as well as highlighting areas where support is/are needed to tackle digital exclusion. The study employed a qualitative approach, interviewing 30 visually impaired older adults, aged 60+. Participants were drawn from a voluntary organisation for people living with vision impairment in Southwest Nigeria. Interview data were transcribed verbatim and analysed thematically using qualitative data analysis software - NVivo (version 11). Results provide clear insight on the nature of the challenges faced by visually impaired older people, particularly with managing finances on computer-enabled platforms. The findings also revealed fears and hopes of this group about the rapid evolution of technologies for managing finances. The study critically explored an understudied population, showing peculiar challenges; it made a case for inclusive designs that are useful for digital inclusion of this population. (RH)

Intergenerational flows of support between parents and adult children in Britain; by Maria Evandrou, Jane Falkingham, Madelin Gomez-Leon, Athina Vlachantoni.: Cambridge University Press, February 2018, pp 321-351; + Corrigendum p 434.
Ageing and Society, vol 38, no 2, February 2018, pp 321-351; + Corrigendum p 434.
Understanding patterns of intergenerational support is critical within the context of demographic change, such as changing family structures and population ageing. Existing research has focused on intergenerational support at a given time in the individuals' lifecourse, e.g. from adult children towards older parents and vice versa; however, few studies have focused on the dynamic nature of such support. Analysing data from the 1958 National Child Development Study (NCDS), this paper investigates the extent to which the receipt of parental help earlier in the lifecourse affects the chances of adult children reciprocating with support towards their parents later in life. The findings show that three-quarters of mid-life adults had received some support from their parents earlier in life, and at age 50 more than half were providing care to their parents. Patterns of support received and provided across the lifecourse differ markedly by gender, with sons being more likely to have received help with finances earlier in the lifecourse, and daughters with child care. The results highlight that care provision towards parents was associated with support receipt earlier in life. However, the degree of reciprocity varies according to the type of care provided by children. Such findings have implications for informal care provision by adult children towards future cohorts of older people, and by extension, the organisation of social care. (RH)

Investing: the case for recognition as an independent capacity; by Herbert Medetsky, Preeti Sunderaraman, Stephanie Cosentino.: Taylor and Francis, August-October 2018, pp 320-331.
The authors provide evidence supporting the need to recognise investing as an independent capacity. A comparison of the definitions and models of financial and investing capacities revealed significant differences between them. A review of the status of investing capacity assessment revealed that there are currently no investing capacity specific assessment instruments (ICSAIs). Implications for researchers and clinicians resulting from the lack of recognition of investing as an independent capacity are discussed and used as a rationale for the need to develop ICSAIs. The benefits of ICSAI development for financial, legal and clinical professionals as well as for investors are discussed. A direction for future investing capacity research is proposed. (RH)

Economic risk exposure through increased labour market volatility and growing caregiving responsibilities has risen for older Americans. At the same time, key protections such as unemployment insurance and Social Security have declined, while other protections _ particularly in the private market - are limited or non-existent. Social policy can lower the chance of risk exposure and the associated costs, especially with respect to unemployment and caregiving. In virtually all instances, however, the Trump administration has already moved to weaken existing protections. And it has offered either no proposals or very limited proposals to increase protections in the private sector. As a result, an ageing population will increasingly face rising economic risks on their own. (RH)

2017

The Financial Conduct Authority (FCA) launched its Ageing Population Project in 2016, with the aim of encouraging firms to reflect on how they can _ better meet older consumers' needs and adapt their practices accordingly. The FCA commissioned the Big Window Consulting Ltd (www.the-big-window.co.uk) to conduct this literature review which informs the Project, and is published alongside the Occasional paper, 'Ageing population and financial services'. It presents current thinking on cognitive ageing, and considers how age-related changes in cognitive abilities affect consumer interactions with financial products and services. It discusses the implications of this for banks and other financial service providers, by focusing on financial services-related tasks, such as paying by cash or with a card; using an Automated Teller Machine (ATM); accessing services in a branch; monitoring accounts; making a telephone enquiry; online banking and financial management; changing product or provider; and longer-term financial tasks or decisions. Service providers must make their local branches more welcoming; and attention should also be paid to frontline staff-customer interactions; the equipment used; digital interfaces and technologies; product and services development and communication; and the provision of decision (or processing) aids. (RH)

The ageing population: coping mechanisms and third party access; by Lisa Edgar, Frances Green, Victoria Ward, Mark Gumbley, Big Window Consulting; Financial Conduct Authority - FCA. Hepworth, West Yorkshire: The Big Window Consulting Ltd [on behalf of] Financial Conduct Authority, 2017, 64 pp.

The Financial Conduct Authority (FCA) launched its Ageing Population Project in 2016, with the aim of encouraging firms to reflect on how they can _ better meet older consumers' needs and adapt their practices accordingly. The FCA commissioned the Big Window Consulting Ltd (www.the-big-window.co.uk) to understand the practical steps that older people and their carers take to manage their access to retail banking services, and their experience in setting up and using formal and informal routes to access their money. In this report, all the older people included in the research needed support with their day-to-day banking, and were using third party access to obtain cash and manage their accounts. Interviews were conducted with 30 older...
The Financial Conduct Authority (FCA) launched the Ageing Population Project in February 2016, to start exploring how this impacts financial services in particular. This Occasional Paper sets out the Project's key findings and outcomes, and the FCA's strategy for mitigating the potential harm arising. It aims to provide an overview of how older consumers are, how they make decisions, what products and services they need, and whether they are able to access them. The report sets out ways in which financial service firms could do more in respect of how they treat customers fairly, under the themes of product and service design, customer support, and continuously reviewing and adapting strategies. It examines and makes recommendations on issues including: retail banking; third party access (ranging from powers of attorney to sharing details such as passwords; later life lending; and long term care. (RH)

Recent strong growth in the incomes of pensioner households and reductions in pensioner poverty are to be welcomed. Set against this are the weaker incomes of working age households, and the challenges faced by younger generations in accumulating wealth. This twelfth report by the Resolution Foundation for the Intergenerational Commission presents findings on the adequacy of retirement incomes for recent cohorts of retirees in Great Britain. It gives projections on the future adequacy of pensions both across and within generations for all of today's working age adults. It focuses on: retirement income levels, and the extent to which they fall below minimum acceptable standards; and earnings replacement rates (the extent to which post-retirement income replaces pre-retirement earnings) assessed against the benchmarks established by the Pensions Commission. The report uses data sources such as the British Household Panel Survey (BHPS; succeeded by Understanding Society, USoc), and the Annual Survey of Hours and Earnings (Office for National Statistics, ONS). Annexes provide more detail on the methods for analysis of earnings replacement rates for recent retirees, and of future retirement income adequacy. (RH)

Behind the headlines: the 'top up' stealth tax on older people in state-funded residential care; by Age UK. London: Age UK, July 2017, 12 pp.
For residents whose care home fees are paid by their local authority, top-up fees are intended to provide flexibility to enable older people to choose a more expensive care home. Such top-ups are paid at the express request of the older person, usually by a relative or friend. This report outlines examples of some of the 250+ cases involving care home fee top ups dealt with by Age UK’s national information line in the past year on these themes: inadequate choice of care homes at the council rate so that families feel there is no option but to pay a top up fee; care homes improperly demanding top ups directly from families; hospital discharges held up by requirements for top ups that families cannot fund; increases in care home fees, forcing residents to pay or to move out; and care homes demanding top ups when self-funders run out of money. (RH)

The effects of defamilization and familization measures on the accumulation of retirement income for women in the UK; by Ruby C M Chau, Liam Foster, Sam W K Yu.: Taylor and Francis, 2017, pp 551-561.
This article is concerned with the link between the effects of pro-market pension reforms on women and familisation or defamilisation measures. It aims to contribute to the study of this link in three ways. Firstly, it identifies defamilisation or familisation measures that have the potential to reduce negative effects of pro-market pension measures on women. Secondly, based on the examples from the United Kingdom, it shows that the government's willingness to provide sufficient defamilisation or familisation measures to assist women to deal with the negative effects of the pro-market pension measures should not be taken for granted. Thirdly, it suggests ways for tackling this problem. (RH)
In this seventh report by the Resolution Foundation for the Intergenerational Commission, the authors explore how wealth is distributed across and within different birth cohorts in Britain, focusing on intra- and inter-generational wealth trends. For younger groups, the problems are weak earnings growth, decreasing rates of home ownership, and the closing of generous pension schemes to new entrants. The report uses the Office for National Statistics' (ONS) Wealth and Assets Survey (WAS) to provide an overview of longitudinal changes in wealth in Great Britain. It examines assets and wealth patterns across and within age cohorts. It looks into how cohorts build up their wealth over time, focusing specifically on active savings behaviour and wealth increases driven by wider economic shifts (notably house price increases). It concludes by bringing these findings together, reflecting on how policy might need to respond. Two annexes present supplementary analysis of cohort wealth trends, and more detail on the data sources and methodological approach used.

Health status, health shocks, and asset adequacy over retirement years; by Geoffrey L Wallace, Robert Haveman, Barbara Wolfe.: Sage, January 2017, pp 222-248.
This article uses data on a sample of retirees drawn from the US Health and Retirement Study (HRS) to examine changes in health over the retirement years, and to estimate the effects of health changes in retirement on wealth. Using the framework of item response theory, the authors develop a novel measure of health that makes use of multiple indicators of physical health that are available in the HRS. The authors find that large negative shocks to the health of male retirees and their spouses are frequent in retirement, and that when such shocks do occur, recovery to the pre-shock level of health is rare. The authors then use a dynamic panel data model, to estimate short- and long-run effects of changes in health on wealth. While estimated short-run effects are modest, long-run estimates of the impact of health shocks on wealth are large, ranging from a 12% to 20% reduction in wealth by the 10th year, following a permanent one standard deviation decrease in health. This article was first presented at the conference, Social Insurance and Lifecycle Events among Older Americans (held on 7 December 2014), which was sponsored by the American Association of Retired Persons (AARP).

Housing wealth dominates the asset portfolios of the older population in Australia and many other countries. Given the anticipated spike in fiscal costs associated with population ageing, there is growing policy interest in housing equity withdrawal (HEW) to finance living needs in retirement. This paper sheds light on homeowners' perceptions of the obstacles associated with two forms of HEW: mortgage equity withdrawal (where the in situ home owner increases his/her housing-related debt), and downsizing (where housing equity is released by moving to a lower-valued property). The authors uncover a series of age-specific barriers impeding older Australians' use of these forms of HEW through qualitative analysis of semi-structured interviews conducted with home owners and professional service providers in related areas of policy and practice. To that end, the authors recommend the development of a range of safeguards that will minimise the risk exposure and other obstacles associated with HEW for older home owners. (RH)

Is giving or receiving psychologically beneficial to older mothers in South Korea?: Importance of marital status; by Yun-Suk Lee.: Taylor and Francis, 2017, pp 137-149.
In order to understand intergenerational financial transfers and subjective well-being for older mothers, this study argues that marital status is an important factor to be considered. Using the first wave of the Korean Longitudinal Study of Ageing (KLoSA), this study finds that married older mothers report higher levels of life satisfaction when they provide economic support; but widowed older mothers feel higher levels of life satisfaction when they receive economic support. Also, regular or irregular financial support appears to also
Lengthening the ladder: the future of mortgage borrowing in older age: full research report by the ILC-UK, supported by the BSA in conjunction with the CML; by Ben Franklin, Cesira Urzì Brancati, Dean Hochlaf, International Longevity Centre UK - ILC-UK: Building Societies Association - BSA; Council of Mortgage Lenders - CML. London: International Longevity Centre UK; Building Societies Association, May 2017, 56 pp. Many people are joining the housing ladder later in life, and taking mortgages with terms that extend into retirement, a trend that is likely to increase. Based on current trends for home ownership, mortgage debt, housing equity and population change, the authors estimate that there will be a significant shift in the customer base of the mortgage market between now and 2030. By then, the authors estimate that the over 65s will hold the majority of the nation’s housing wealth, while also accounting for a rising share of overall mortgage borrowing. In light of these trends, this report seeks to better understand the circumstances of those who are mortgage borrowers in retirement, by conducting in-depth analysis of the Wealth and Assets Survey (WAS) from the Office of National Statistics (ONS). The report looks at the theory and evidence on the distribution of mortgage debt by age; and explores the changing demographics and economics behind increased interest amongst older borrowers. The report examines the characteristics of current borrowers in retirement, comparing those who do have mortgage debt with homeowners who do not have an outstanding mortgage. The characteristics of future borrowers are examined and compared with those who are unlikely to have any outstanding mortgage debt in retirement. The authors try to establish the key causal reasons determining the likelihood of being a borrower or non-borrower. Some implications and recommendations for policy, industry and the regulator. (RH)

Ageing and Society, vol 37, no 9, October 2017, pp 1798-1823.

Previous studies show a decline in parent-child co-residence among older people. This study examined the effect of living away from adult children on upward intergenerational monetary transfers. It analyses data from the Follow-up Sampling Survey of the Aged Population in Urban/Rural China (FUSSAPUR), a 2006 survey of 19,947 people aged 60 and over selected from 20 provinces in China. Results indicate that older people who were not co-residing but had at least one adult child living in another community or village within the city or county were likely to receive more intergenerational monetary transfers than those who were living with children. Living close to children, rather than co-residing with them, might be the primary living arrangement for older Chinese people in the foreseeable future. The findings have important programme and policy implications for countries such as China, which has the largest population older people in the world. There is a strong need for the development of specific public care support systems focused on older people in general, and older people in rural areas in particular. (RH)

Low to middle income households (LMIs) are defined as those in the bottom half of the income distribution. Their incomes are above the bottom 10%, and they receive less than one fifth of their income from means-tested benefits - in total, around 6 million working-age households and 10 million adults. This study’s focus is older LMIs, in which the head of household is aged 50 to State Pension age (SPA), comprising 1.8 million households, almost a third of all LMIs. The authors use analyses by the Resolution Foundation of the Office for National Statistics’ (ONS) Family Resources Survey (FRS) to examine: older LMIs and the labour market; composition of household income and long term trends; and spending and saving. It is concluded that older LMIs remain at risk of continued financial strain as they approach retirement. Their living standards are still no higher than in 2007-08: they struggle to maintain current living standards, or to save enough to support their future living standards in retirement. Annex A mentions use of a related ONS series, Households Below Average Income (which seems not to be referred to elsewhere in the text). (RH)

How does the rising 'regulatory welfare state' address social policy concerns in pension markets? This study examines this question by comparing the regulatory responses to high charges paid by low-income workers in pension markets in the UK and Israel. In the UK, with the recognition that the market would not cater to low-income workers, the regulatory response was the creation of a publicly operated low-cost pension fund (the National Employment Savings Trust - NEST), a 'public option' within the market. This allowed low-income workers access to a low level of charges, previously reserved for high-income and organised workers. In Israel, regulation sought to empower consumers, while providing minimal social protection by capping pension charges at a relatively high level, thereby leaving most of the responsibility for reducing the charges with the individual saver. By comparing these two cases, the article develops an analytical framework for the study of the regulatory welfare state, making two contributions. First, it highlights different types of regulatory citizenship: minimal regulatory social protection as opposed to a more egalitarian approach. Second, it identifies an overlooked regulatory welfare state strategy: creating 'public option' arrangements, whereby a state-run (but not funded) service operates within the market. (RH)

UK poverty 2017: summary; by Helen Barnard, Ashwin Kumar, Andrew Wenham (et al), Analysis Unit, Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation, December 2017, 4 pp (Inspiring social change; Ref 3272).

Over the last 20 years, the UK has seen very significant falls in poverty among children and pensioners. In 1994/95, 28% of pensioners lived in poverty, falling to 13% in 2011/12. However, poverty rates have started to rise again, to 16% for pensioners in 2015/16. This is summary of the main report, 'UK poverty 2017: a comprehensive analysis of poverty trends and figures' (113 pp). It is based on analysis of a range of household surveys and published statistics, and examines how UK poverty has changed in the last 20 years, as well as more recent developments. Among key points are that and around one in six pensioners in the poorest fifth of the population, are socially isolated; and 70% of people in work are not contributing to a pension. The main fall in the pensioner poverty rate was among single pensioners between 1998/99 and 2004/05. This was helped by increased state support for low-income pensioners through the Pension Credit Guarantee (previously the Minimum Income Guarantee - MIG) and rising home ownership, which reduced the proportion having to meet rising rents. Howewever, the Pension Credit Guarantee has failed to keep up with prices; and housing costs for those pensioners still renting have risen. (RH)
The importance of developing a system that is perceived to be "fair" is a central element in debates about long-term care funding in the UK. It is therefore surprising that while previous research has established that older people tend to resent the idea of using housing equity and other personal assets, it has often revealed little about the factors underpinning these attitudes or reflected on how they sit within a wider frame of social and political norms. Drawing on 60 semi-structured in-depth interviews with older home owners who have released equity from their homes, this paper explores why people feel that it is fair, or unfair, to require owners to use their housing equity to fund long-term care needs, once factors like reluctance to trade on the home, and mistrust of equity release products, have been excluded. While a small majority of participants considered it unfair, a substantial minority thought it fair that they were required to use their accumulated housing equity to meet care needs. This distribution of attitudes enabled the authors to explore the reasons why participants held each view, and so reflect on the impact of pro-social and pro-individual norms in shaping attitudes towards intra-generational fairness and ideas about "responsible citizenship". The analysis posits that the factors that shape attitudes toward using housing assets to pay for care, and their relationship to the wider rhetorical framework of asset accumulation, management and decumulation, have been misunderstood by policy makers. The implications of the findings for policies that seek to promote the development of a housing-asset based care funding system capable of attracting widespread support are discussed. (RH)

Ageing and Society, vol 37, no 6, July 2017, pp 1268-1290.
Why is it that many people fail to seek retirement planning advice when doing so is clearly indicated? Distrust of financial intermediaries is often presented as the common answer. But this paper shows that trust issues are only part of the answer: an appreciable proportion of individuals experience anxiety at the prospect of visiting a financial adviser. In the present investigation, financial adviser anxiety is studied among 950 Dutch adults over the age of 50. Anxiety levels were measured using a six-item scale that was administered as part of a larger nationwide investigation on retirement attitudes and behaviour. Findings revealed that nearly one-third of respondents reported having moderate to severe levels of anxiety at the prospect of visiting a financial professional. Furthermore, a hierarchical regression analysis revealed that strong predictors of anxiety included one's educational level, income, age, level of future time perspective, risk tolerance, financial knowledge and scepticism regarding whether advice from a financial professional can be trusted. A cluster analysis using demographic and psychological covariates identified three separate groups of older adults that were found to differ in terms of their mean level of anxiety. Those who had low levels of education and low incomes were found to disproportionately display high levels of financial adviser anxiety. (RH)

Age-friendly banking: what it is and how you do it; by David Steele, Age UK; AARP Public Policy Institute. London: Age UK, 2016, 43 pp.
'Age-friendly banking' should mean banking services, products and facilities that remain accessible and easy to use as people age, assist caregivers, and prevent financial exploitation. This report describes some of the challenges faced by older people in using banking and payments systems, and how banks in the UK and USA have been finding solutions to problems facing older customers. It includes 13 case studies of ways in which banks, building societies and clearing services in the UK and the USA are helping customers to avoid scams; prevent fraud, financial abuse or exploitation; and provide accessible services such as mobile bank branches and services for carers. Based on the case studies and feedback from older people, the report presents an agenda for innovation comprising: detecting and stopping financial scams; enabling caregivers to assist with banking; accessible branch banking; designing banking services to be age-friendly; better call handling systems; responding to customer vulnerability; and age-friendly products. An age-friendly banking checklist includes these points, and also seeks improvements that incorporate: appropriate flexibility in identification check; better ways of "passing security"; age-friendly technology; listening carefully and speaking clearly; pathways to better interest rates; removal of age restrictions on financial products; and understanding vulnerability.
Defamilisation and familisation measures: can they reduce the adverse effects of pro-market pension reforms on women in Hong Kong and the UK?, by Ruby C M Chau, Liam Foster, Sam W K Yu.: Sage, 2016, pp 205-224.

Typically, women's pay is lower than their male counterparts, and they have a greater likelihood of having caring responsibilities or working part-time. As a result, women tend to accumulate smaller pension pots than men. This article explores the impact of defamilisation and familisation measures for women with caring responsibilities and their implications for access to pensions in later life in Hong Kong and the UK in the context of pro-market pension reforms. The article discusses pro-market pension reforms and their effects on women. Next, it discusses the potential role of defamilisation and familisation measures in reducing the adverse effects of pro-market pension reforms. It then focuses on pension policies and examples of defamilisation and familisation measures in Hong Kong and the UK. Finally, on the basis of the discussion of the link between defamilisation and familisation measures and pension measures for women, the authors assert that both Hong Kong and the UK still have much to do in developing multi-option measures throughout the lifetime - measures that could limit future inequalities in retirement between men and women. (OFFPRINT.) (RH)

Dementia and financial incapacity: a caregiver study; by Olivia DaDalt, Arielle Burstein, Birgit Kramer (et al.).: Emerald, 2016, pp 66-75.

Caregivers' experiences of dealing with the financial aspect of dementia have not been widely discussed. This paper identifies strategies that caregivers of people with dementia use for financial and estate planning, and what advice they would give to others in their position. Data were gathered via in-depth in-person interviews with 34 caregivers of individuals with dementia in Boston, Massachusetts. Participants were asked questions about: how they financed care; the resources and people they used to help manage care and finances; and advice they would give to other caregivers. Caregivers wished that they had done more in-depth planning regarding dementia care and financial arrangements. Participants also wished they had saved more money for care expenses or a “nest-egg”. Participants had mixed feelings about the usefulness and trustworthiness of financial advisors, but those who had elder care lawyers recommended them highly. It would be beneficial to rerun this study with a larger, gender-balanced sample with a wider variety of socio-economic backgrounds. The advice and insight provided in this paper would be useful both to dementia caregivers who can learn from the experiences of those interviewed, and to industry professionals such as financial advisors and elder care lawyers, who may recognise from these interviews the areas in which caregivers need assistance and the services they can provide. (RH)

The Autumn Statement delivered by Chancellor Philip Hammond on 23rd November 2016 outlined the state of the UK's economy and public finances in the wake of the vote to leave the European Union (EU). The International Longevity Centre UK (ILC-UK) gives a short analysis of what the Autumn Statement means for savings, household incomes and interest rates, and finds that it is generally bad news for savers. The Government needs to think carefully about how it delivers its savings policy. ILC-UK acknowledges support from its Partners Programme. (RH)

Exploring the boundaries between interpersonal and financial institution mistreatment of older people through a social ecology framework; by Corina Naughton, Jonathan Drennan.: Cambridge University Press, April 2016, pp 694-715.

Ageing and Society, vol 36, no 4, April 2016, pp 694-715.

Interpersonal financial abuse of older people is well documented, but the potential role of financial institutions is rarely examined. Financial institution mistreatment describes direct and indirect practices by financial institutions that threaten older people's financial well-being. This analysis was based on a survey of community-
dwelliong older people ($N = 2021$) aged 65 years and older in Ireland, and examined self-reports of interpersonal and financial institution mistreatment. The prevalence of interpersonal financial abuse was reported by nearly 2% of respondents, compared to 1% for financial institution mistreatment. The socio-demographic and health characteristics of the group who experienced interpersonal financial mistreatment were different from those who reported financial institution mistreatment. The boundaries between the two phenomena were explored using a social ecology framework that reflects the influences of ageism and normative practices on elder abuse. The study confirms previous international evidence on interpersonal financial abuse, and provides preliminary data on financial mistreatment by financial institutions. The evidence has implications for policy and current preventative strategies that tend to ignore the influence of macro-contextual factors such as legislative and institutional normative practices, government policies and societal attitudes that can act as permissors of some types of financial mistreatment. Financial abuse is the most common form of elder abuse. Capacity Australia, established to promote education regarding capacity and abuse prevention across health, legal and financial sectors, was awarded a grant by the Dementia Collaborative Research Centre to educate the banking sector on financial abuse and dementia. In this study the authors aimed to develop a knowledge translation tool for bank staff on the issue. The banking sector across Australia was engaged and consulted to develop a tailored education tool based on Australian Banking Association's Guidelines on Financial Abuse Prevention, supplemented by information related to dementia, financial capacity and supported decision-making. The tool was tested on 69 banking staff across Australia from two major banks. An online education tool using adaptive learning was developed, comprising a pre-test of 15 multiple choice questions, followed by a learning module tailored to the individual's performance on the pre-test, and a post-test to assess knowledge translation. A significant increase in scores was demonstrated when baseline scores were compared with post-course scores. The tool took approximately 10-20 minutes to complete depending on the knowledge of participant and continuity of completion. The Australian banking industry was amenable to assist in the development of a tailored education tool on dementia, abuse and financial capacity. This online e-tool provides an effective medium for knowledge translation. (JL)

One of the challenges in preventing the financial exploitation of older adults is that neither criminal justice nor non-criminal justice professionals are equipped to detect capacity deficits. Because decision-making capacity is a cornerstone assessment in cases of financial exploitation, effective instruments for measuring this capacity are essential. The authors introduce a new screening scale for financial decision making that can be administered to older adults. To explore the implementation and assess the construct validity of the Lichtenberg Financial Decision Screening Scale (LFDSS), the authors conducted a pilot study of 29 older adults seen by APS (Adult Protective Services) workers and 79 seen by other professionals. Case examples are included. (RH)

The overlooked over-75s: poverty among the 'Silent Generation' who lived through the Second World War; by Sue Arthur, Ciaran Osborne, Matt Barnes, Independent Age; Department of Sociology, City University. London: Independent Age, 2016, 32 pp.

The financial circumstances of the group of older people who lived through the Second World War - sometimes called the 'Silent Generation' is examined. This report uses incomes data from the Family Resources Survey (FRS) 2013-14 collected by the Office for National Statistics (ONS) and the National Centre for Social Research (NatCen) to look at the differences between groups of older people, and identifies those who are at risk of being forgotten on low incomes. Qualitative interviews were also conducted - presented as case studies - illustrating the experience of living on a low income in old age. The report looks at and defines poverty and material deprivation, and the role of state financial support. The analysis shows that, on average, those aged 75 and over live on lower incomes than younger adults. Many are living in poverty, and are unlikely to see
significant increases in their income during their lifetime. Independent Age calls for a renewed government emphasis on Pension Credit to boost low take-up of this benefit, and to make sure its value is not eroded over time. The Government should also ensure that other benefits such as Winter Fuel Payment and the free bus pass are maintained for those most at risk of living in poverty, particularly single older people, older women and older renters. When Attendance Allowance is “reformed”, the Government must guarantee that local councils will use it for its intended purpose, and that take-up does not decline. This report thus challenges recent stereotypes of "wealthy pensioners", and highlights the risk that the incomes of the over 75s will get overlooked in debates around intergenerational fairness and a policy focus on the new State Pension. (RH)

Paying for care costs in later life using the value in people’s homes; by Les Mayhew, David Smith, Duncan O’Leary.: International Association for the Study of Insurance Economics, 2016, pp 1-23.
With the number of UK citizens aged 75+ doubling to 10 million by 2040, and with 1.3 million people already receiving social care services in England alone, social care funding is a key public policy challenge. The Government has launched a set of reforms designed to get social care funding onto a sustainable footing, by establishing a new level for what individuals and the state will pay. The reforms are designed to encourage individuals to explore how best to use their available wealth and assets to meet care costs, through a mixed system of local authority and private sector care-funding options. One option is to use the value in the home to bridge the cost between out-of-pocket costs and care home fees. In this article, the authors consider two new financial arrangements designed to meet the needs of people in different financial circumstances based on releasing equity from the home. These are an equity-backed insurance product, and an "equity bank" that lets a person draw down an income from their home. This paper draws on two previous research publications: Mayhew and O’Leary's 'Unlocking the potential' (Demos, 2014), and Mayhew and Smith's 'The UK Equity Bank: towards income security in old age' (International Longevity Centre - UK, 2014). It was first published in The Geneva Papers, 2016, (1-23), published by the International Association for the Study of Insurance Economics. (RH)

Findings, 2171, January 2016, 4 pp.
Preparing better for later life by saving more and working longer is particularly difficult for people in low-paid, low-skilled work. This research looks at how barriers to saving and working longer can be overcome and how policies could support low-income households to plan better for later life. It finds that the cost of living is one of the main barriers cited by participants as a barrier to saving. Most participants accepted they would need to work longer to be able to ‘afford’ to retire. Views varied greatly according to the life stage of the individual, with younger participants prioritising family expenses such as saving for Christmas. (RH)

We are strangers in our homes: older widows and property inheritance among the Esan of South-South Nigeria; by Friday Asiazobor Eboiyehi, Akanni Ibukun Akinyemi.: International Institute on Ageing (United Nations - Malta), 2016, pp 90-112.
International Journal on Ageing in Developing Countries, vol 1, no 2, 2016, pp 90-112.
The study examined the plight of older widows as it relates to property inheritance among the Esan of South-South Nigeria. The aim was to identify the challenges associated with bereavement among widows, particularly on property and assets bequeathed from their late spouse and the strategies they employed to cope with the identified challenges. The study was conducted with the aim of raising discourses regarding social-cultural issues affecting widows’ survival. Data were purposively collected from respondents in two local government areas - namely, Esan Central and Esan West - with the aid of questionnaires and in-depth interviews. In all, 200 questionnaires were administered, of which 180 (90.0 per cent) were retrieved and analysed. Moreover, 36 in-depth interviews were conducted with purposively selected older widows with certain peculiarities. About 33 per cent of the widows suffered eviction from a late husband’s house, while others suffered partial denial from inheritances. Arising from these, the consequences of negative cultural practices are illustrated by loneliness (16.7 per cent), poor access to basic healthcare (15.5 per cent), constant illness (11.5 per cent) and poverty (6.6 per cent). Other challenges identified include psychological trauma (5.6 per cent), poor nutrition (5.6 per cent), abandonment (3.9 per cent) and loneliness (1.7 per cent). The study concludes that socio-cultural practices attributed to inheritance among widows escalates their predicaments among the Esan people. Government and
other relevant agencies and organisations must act to alleviate the infringement of fundamental human rights of this population through the instruments of social institutions and the legal framework. (RH)

Aging with rising risk: have older households experienced faster-growing risk exposure than younger ones since the 1990s?; by Christian Weller, Sara Bernardo.: Taylor and Francis, July–September 2015, pp 232-254.
Financial markets have been characterized by boom and bust cycles since the 1980s, while the responsibility for managing retirement wealth has increasingly shifted onto individual households at the same time. In the United States, policy makers and experts have expressed concern that older householders appear to be increasingly exposed to growing financial risks just as they near retirement. This article considers household data from the US Federal Reserve's Survey of Consumer Finances from 1989 to 2010 in order to analyse the correlation between age and risk exposure. The authors test whether older householders' risk exposure has indeed grown over time; whether it has increased more than that of younger householders; and whether changes in the demographic composition of older householders have contributed to older households' rising risk exposure. They also test the degree to which increases in risk exposure can be traced to a growing concentration of household assets held in stocks and housing, and to rising householder indebtedness. Their results indicate that risk exposure has grown more for older householders than for younger ones, that demographic changes among older householders have contributed to additional increases in older householders' risk exposure, and that the growth of older householders' risk exposure is driven more by rising risky asset concentration and less by greater indebtedness. (RH)

In this "White Paper", the ILC-UK argues for a strategy for later life funding to secure effective funding for adult social care; implement the Dilnot reforms; find ways of ensuring the provision of mass market financial advice; develop default options for those who ‘sit on their pension pots and do nothing’; provide clarity around what constitutes the deliberate deprivation of assets within the context of the new pension freedoms; incentivise downsizing; support innovation in the equity release market; and support policy which extends working lives. A particular focus is on these effects for the post-war "baby boomer" and "post-boomer" generations, who will soon have to deal with these issues. This report is the first publication from the Centre for Later Life Funding, which is, in part, a continuation of the Care Funding Advice Network (CFAN), a coalition of organisations and individuals seeking to improve on provision of financial advice, as recognised by the Care Act 2014. (NH/RH)

For people with dementia, keeping on top of finances can be difficult, and most people with the condition have difficulty using banks. This article looks at ways in which Lloyds Banking Group has been working in partnership with the Alzheimer's Society to promote dementia-friendly banking in the UK. (JL)
From: journal.aarpinternational.org

This analysis used data from the Survey of Income and Program Participation (SIPP) to examine whether veteran and disability statuses were jointly associated with poverty and material hardship among households that included an older adult. Compared to households that did not include a person with a disability or veteran, disabled nonveteran households were more likely to be in poverty and to experience home hardship, medical hardship and bill paying hardship. Disabled veteran households were not significantly different in terms of poverty but exhibited the highest odds of home hardship, medical hardship, bill paying hardship and food insufficiency. Implications for social work practice are discussed. (JL)
Income security and a good retirement; by Will Parry, James Llloyd, Strategic Society Centre; Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation - JRF. July 2015, 37 pp. This report describes the results of explorative, quantitative research into the association between level of secure income and a range of retirement outcomes, for retirees in England with some form of private pension income. The research was undertaken in the wake of the April 2015 changes to rules on Defined Contribution (DC) pension savings, which broke with the previous regime known as the 'annuities deal' - which required DC pension savers to convert their savings into a secure income at retirement. (NH)

Low-income retirees, financial capability and pension choices; by James Lloyd, Chris Lord, Strategic Society Centre; NatCen Social Research; Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation - JRF. July 2015, 4 pp (Inspiring social change; Ref: 3128). This research looks at low-income retirees with Defined Contribution pension savings. It examines how choices are being made on pensions and the implications for retirement income since changes were implemented in April 2015, allowing retirees to opt to draw down or cash in their pension pots. It also examines the impact of individuals' financial capability. (NH)

Making the system fit for purpose: how consumer appetite for secure retirement income could be supported by the pension reforms; by Ben Franklin, Helen Creighton, International Longevity Centre UK - ILC-UK. London: International Longevity Centre UK - ILC-UK, January 2015, 23 pp. ILC-UK research finds that the majority of people approaching retirement want to use their pension pots to deliver a secure guaranteed income for life, with inflation protection being very important. However, many may be too confused to know how to go about achieving this goal. This report finds that consumers approaching retirement are ill-equipped for the new pension freedoms announced by George Osborne in his 2014 Budget. The report has been supported by a consortium of industry partners (EY, Just Retirement, Key Retirement, LV= and Partnership) and guided by pensions and retirement expert, Ros Altmann. The research incorporates a representative survey of 5000 people aged 55-70 who are yet to retire or draw on their private pension wealth. The main themes that emerge include: secure income in retirement is preferred; older consumers are risk averse; withdrawing everything from the pension could result in retirement funding shortfalls; and advice is favoured, but trust issues could lead to an advice gap. (RH)

Pension pots and how to survive them; by Les Mayhew, David Smith, Douglas Wright, Faculty or Actuarial Science and Insurance, Cass Business School, City University London; International Longevity Centre UK - ILC-UK. London: International Longevity Centre UK - ILC-UK, November 2015, 30 pp. In 2014, the UK Government announced proposals to allow people to withdraw money from their pension pot from age 55, subject to their marginal rate of income tax in that year. The main effect of this change is to remove the obligation to annuitise funds at any future time. This paper looks at how individuals can best use their pension pots, and argues that most people are better off drawing down, rather than annuitising. The authors review the likely effects of the new flexibilities on the decision to buy an annuity by aligning that decision to a person's retirement strategies. They deal with two types of longevity risk - which they call the selection effect and longevity drift - and the difference that these will make to future financial planning. They provide two worked examples of different draw-down strategies, to illustrate whether the risk that a retiree will run out of money can be avoided without buying an annuity. The report also considers the timing and bequeathing of wealth; the integration of housing wealth into retirement planning; and the question 'what if the pot does run dry?' It highlights the need for people to take advice; also that too many pension pots are far too small. While autoenrolment seems to have been successful in bringing more people into saving, the next challenge is how to get people to save adequately. The research finds that with careful management, moderate sized pension pots of £100,000 or more should not run out until at least the age of 80 or even older. Using a flexible rather than fixed drawdown approach can reduce the risk of running out still further.

Using an interdisciplinary model of financial planning, the authors investigated the factors contributing to perceived adequacy of retirement savings among Hong Kong workers by replicating a previous study of American and Dutch workers. The model was also tested for age differences in the way in which the variables operated within the model. These questions were examined using data from a phone survey conducted with 999 Hong Kong workers in 2012. The authors examined three psychological factors (future time orientation, goal clarity and financial knowledge), three social support variables (early learning from parents, spousal support and friend support) and three institutional factors (quality of employer pensions, trust in banks and fund managers, and trust in the government), as well as retirement savings planning activity and perceived retirement savings adequacy. Path analyses were used to test the model for the whole sample, and separately for younger (N=437) and older (N=562) workers. Although a few age differences were found in the path analyses, the model was found to be useful in explaining the factors contributing to retirement savings planning and practices. How these findings differ from those of prior studies are discussed, and their theoretical and practical implications are assessed. (RH) ISSN: 0144686X

Draws together key findings from a programme of work which looked at the prospects for future pensioner living standards. Findings include the prospect that the improvement in average pensioner living standards seen over the last few decades is likely to continue into the start of the next decade. Recent pension reforms to the state pension system are likely to mean that fewer pensioners will be reliant on means-tested benefits to lift them out of income poverty, but for middle and higher income people the state pension will increasingly replace less of their earnings. With greater reliance now being placed on individuals’ private savings decisions, it will be important for the government to ensure that people have the right, accessible information to help them plan appropriately for retirement; and with working lives likely to continue getting longer, policy-makers will need to continue to be aware that not everyone will be equally able to work into older age. (NH) From: https://www.jrf.org.uk/report/where-next-pensioner-living-standards

The author explores how the next government (from May 2015) could develop a better deal in relation to work, pensions and poverty. Her paper argues that given the changing face of poverty, the next government should focus on creating better jobs, if it is really to encourage people to work longer and save more for retirement. Furthermore, it could do more to support those who are currently under-saving for retirement. The paper draws on evidence from a number of recent qualitative and quantitative Joseph Rowntree Foundation (JRF) research reports and government statistical data. The paper suggests policy recommendations for the next government, focused on creating better jobs and helping those on lower incomes to increase their pension pots. This includes: ensuring that the minimum wage is set with regard to the changing price of essentials and changing average earnings; raising awareness of the Living Wage and playing a leadership role; industrial strategies for low-paid sectors; mid-life career reviews and increased rights for those aged 60 and over; the redistribution of tax relief on pension contributions; and the auto-escalation of workplace pensions. This paper thus looks at the issue of an ageing society, work and pensions through a poverty lens. (RH) ISSN: 14717794 From: www.emeraldgrouppublishing.com/qaoa.htm

2014

As policy makers in the United Kingdom and many other countries grapple with financing the needs of an ageing population, financial planning for social care in later life is high on political agendas. The authors draw on qualitative research with older couples in the United Kingdom about their intimate money practices to analyse the day-to-day meanings attributed to money, saving and consumption in the context of financial
planning for later life and death. The authors find that expenditure on funerals and home adaptations is discussed, negotiated and planned, as is 'downsizing' to release capital from the home for financing day-to-day expenses and leisure expenses. These outcomes are within easy contemplation and are indeed money practice of older couples. In contrast, end-of-life planning for domiciliary or residential care was virtually non-existent across all socio-economic groups; and couples employed a range of techniques to avoid making these discussions 'real'. Costs (while well known) are seen as astronomical, details are scarce, intensive domiciliary care is never discussed, and death is seen as preferable to residential care. The authors theorise antipathy to care planning as a product of social and psychological construction of the 'fourth age' as a period of abjection, and therefore 'wasted' expenditure. Exhortations by policy makers for individuals to consider care costs will be ineffective without recognition of the cultural transformation of later life. (RH)

Financial resilience in later life; by Financial Services Commission, Age UK. London: Age UK, 2014, 61 pp. In its report in 2013, the House of Lords Select Committee on Public Service and Demographic Change concluded that 'we are woefully under prepared for our ageing society. In an era of economic uncertainty, Age UK held a Financial Services Commission to examine how older people's financial resilience can be improved. This report summarises emerging themes, such as planning for the whole of later life, including possible care needs. Other sections consider approaching retirement; decision-making in retirement; and staying in control in later old age. The report makes recommendations on: information, advice and guidance; financial products; and building trust. (RH)

Income from work: the fourth pillar of income provision in old age; by Gabriel Heller Sahigren, Age Endeavour Fellowship - AEF; Institute of Economic Affairs - IEA. London: Institute of Economic Affairs, January 2014, 59 pp (IEA Discussion paper, no 52). The Institute of Economic Affairs (IEA) has worked with the Age Endeavour Fellowship to produce reports such as this on the effects of work on ageing (http://www.ageendeavour.org.uk/research). This report asks why older people have low labour market participation, even with increased life expectancy. It considers the impact of disability and unemployment benefits on employment at older ages. It asks whether employment protection and anti-discrimination laws are useful or harmful; and whether there are negative side effects of raising employment at older ages. It concludes that reversing the steep decline in employment rates among older people since the mid 20th century is not going to be easy. However, the opinion is expressed that "less government involvement through state pension schemes, disability insurance and employment regulation increases the ability of individuals to determine their own work and retirement patterns.” (RH)

From: Institute of Economic Affairs, Lord North Street, London SW1P 3LB.

Research on Aging, vol 36, no 2, March 2014, pp 180-206. The precautionary savings model predicts that households accumulate wealth to self-insure against unexpected declines in future income and unforeseen expenditures. The authors used data from the US Health and Retirement Study (HRS) to construct two measures of health risks, with the aims of: investigating whether the near-elderly who face higher health risks save more; and examining the factors that contribute to health risks that the near-elderly face. Their results do not support the hypothesis that household savings increase with the health risks that they face. Individuals who confront higher health risks in the future are those who are already in fair or poor health status, or those who have a health condition such as diabetes or lung disease. Lower earnings and high medical expenditures caused by current poor health status prevent households from accumulating savings for future health adversities. (RH)

Ageing and Society, vol 34, no 10, November 2014, pp 1666-1687. Access to economic resources influences the material conditions of life for older people, as well as their freedom and capacity to achieve the kind of lives they value. Security is one aspect of later life valued by older people. Ontological security provides a sense of order and continuity, and needs to be understood in terms of the
situated life experiences and circumstances of older people. The study reported in this paper analysed 145 qualitative interviews with New Zealanders aged 63-93 in order to explore how participants understand ontological security. Varying levels of access to economic resources were associated with differing abilities of participants to manage the unpredictability of everyday life. Among the wealthy, security was strongly connected to the freedoms provided by ample financial resources. Contrary to what might be expected, those with the lowest levels of economic resources did not express higher levels of insecurity, but instead drew upon life experiences of managing and making do to construct a trajectory of security. Those with mid-range levels of economic resources expressed most insecurity, including anxiety over changing economic conditions and concerns over their ability to manage reductions in economic resources. The paper highlights the need to recognise ways in which access to economic resources intersect with life circumstances, past experiences and future social expectations to provide opportunities for all older people to pursue security as they strive to age well. With shrinking pension pots and longer life expectancy, retirement incomes look set to come under increasing pressure unless alternative sources of income become available. This paper looks at the current market for equity release. It proposes an Equity Bank, which would be a state agency which helps people release income from their homes in the form of a lifelong annuity in return for selling a portion of the equity in their homes to the state, in which the value of the annuity is recovered on the death of the recipient. This paper describes how it could work in practice, by giving examples and estimates of the size of target population and the consequent cash flows both for the individual and the state. The UK Equity Bank would allow people to exchange a fixed proportion of the equity in their home for a lifetime income linked to inflation. Providing people with a secure income by unlocking the equity in housing assets could improve standards of living for the benefit of the people themselves, the local community and society as a whole. (RH)

2013

This paper adopts a counterfactual decomposition analysis to analyse cross-country differences in the size of household wealth and levels of household wealth inequality. The findings of the paper suggest that the biggest share of cross-country differences is not due to differences in the distribution of household demographic and economic characteristics, rather they reflect strong unobserved country effects. Older people are thought to be particularly vulnerable during times of economic downturn. This report looks at the experience of a specific group of retired home owners age 65+ in Poole and Bournemouth, Dorset, who are living on modest incomes and not in receipt of means tested state pensions, the so-called “asset rich cash poor” (ARCP). This project investigates how this group managed their financial circumstances the impact of the downturn on their well-being and quality of life; and whether services and support available to this group and other older people could be improved. The study found that many ARCP older people, particularly women, had done little retirement planning; and they tended to manage the money they had very carefully and had an aversion to debt. The combination of reduced income from investments, increases in pensions which do not keep pace with inflation, combined with increases in costs for essential and non-essential expenditure, is having an impact on social, physical and mental well-being, and is causing noticeable lifestyle changes. Cuts to public
and third sector services are similarly being affected by the economic downturn, and having an indirect impact on older people. In order to make ends meet, some ARCP older people may take greater financial risks or be more vulnerable to abuse in an economic downturn. While this report recognises the strengths within older people to manage money, the authors suggest that there is a need for more appropriate financial advice and support for this group. (RH)

Behind closed doors: older couples and the gendered management of household money; by Dinah Bisdee, Tom Daly, Debora Price.: Cambridge University Press, January 2013, pp 163-174.
As couples survive longer and live together into older age they face many issues of financial management, including daily money management on reduced and/or reducing income, and paying for care or the additional costs of disability. Yet household money management is highly gendered, especially for older age groups. This has implications for the ability of women in particular to manage financial decisions in the face of their partner's illness or widowhood, as well as for their autonomy and well-being. This study analysed in depth qualitative data from 45 older couples across the socio-economic spectrum to show that women have varying emotional responses to money management in coupledom: ‘accepters' who accept financial inequality and dominance by their husbands, ‘resenters' who recognise these inequalities but resent them, and ‘modifiers/resisters' who retain financial independence and power within their relationships. The study found that it was only the latter group, who had long histories of financial control and management, who were well placed for financial management and decisions in later life. By recognising the implications of different types of couple relationship, policies can be better designed to assist those navigating money in later life. (JL)

Councils are required to check that "top-up payments" - paid by relatives to improve the quality of council-funded care - are voluntary, and that families can afford to pay them. In this report, Independent Age uses responses to Freedom of Information requests it made to all English councils with adult social services responsibilities about third party top-up fees for council-funded care home residents. It found that of the 129 councils (out of 152) responding, only 36 (28%) provided complete data, a further 36 (28%) did not provide any data at all, and 57 (44%) provided only incomplete data, or provided data that suggested they were not compliant with regulations. In addition, the top two concerns affecting callers to Independent Age's advice service in 2012 were care home funding and third party top-ups. Findings from a joint survey with the English Community Care Association (ECCA) report the views of care homes that reinforce the FOI findings: top-up payments are being paid by relatives, because the care home fees paid by councils are too low. The report summarises requirements made in the two main pieces of guidance from the Department of Health: Local Authority Circular LAC (2004)20: Guidance on National Assistance Act 1948 (Choice of Accommodation) Directions 1992; and Charging for Residential Accommodation Guide (CRAG). The report concludes that the evidence suggests that top-up fees have become a "secret subsidy paid in many "areas by families of the poorest care home residents to support the low level of care home funding that councils are willing or able to provide. A supplementary sheet summarises how Independent Age rated the local councils who responded to the FOI request. (RH)

Social Policy and Society, vol 12, no 1, January 2013, pp 135-146.
Although poverty rates among older people in the US are at an all-time low, many face rising fiscal insecurity. The US welfare state is being remodelled in market-friendly ways that maximise individual choice, risk and responsibility, rather than family friendly ways that maximise shared risk and responsibility and reduce insecurity. This article analyses how each of the main sources of income for older people are being either frozen or shrunk in ways that are likely to increase inequality and insecurity in the years ahead, particularly among those who are female, black and/or Hispanic, and unmarried. The article assesses various policy changes for their capacity to either increase or decrease financial insecurity and inequality, particularly for those with a lifetime of lower earnings, more labour force disruptions and greater responsibility for providing unpaid care work for the young, disabled or frail. (JL)
Gender inequality from beyond the grave: intra-household distribution and wellbeing after spousal loss; by Bjorn Halleröd. Cambridge University Press, July 2013, pp 783-803.

Ageing and Society, vol 33, no 5, July 2013, pp 783-803.

The present article integrates research on spousal loss among older people and research on intra-household income distribution, and relates pre-loss intra-household distribution of incomes to post-loss well-being. Data are drawn from the Swedish Panel Survey on Ageing and the Elderly (PSAE), comprising couples that were married in the mid-1990s (n=1503) and that were either still married (n=1262) or who had experienced spousal loss (n=241) in 2002-03. The results showed that large intra-household pre-loss income differences increased the occurrence of psychosocial problems among both widows and widowers. Hence, unequal intra-household distribution of resources makes the coping process harder for both men and women. It was also shown that unequal pre-loss distribution of incomes affected a measure of global well-being among widowers. Widows suffered to a greater extent from economic difficulties, but these difficulties were not related to pre-loss distribution of incomes. Thus, the overall results showed that a gendered labour market that generates an unequal intra-household distribution of income has repercussions not only for gender equality among intact households, but also for the coping process of both widows and widowers. Cash transfers (benefits and tax credits) are crucial to how inequalities develop over time. This paper looks at how the 1997-2010 Labour government's aims, policies and achievements on poverty and inequality related to its reforms of and spending on cash transfers. Labour's aims for poverty and inequality were selective. "Equality of opportunity" was the stated aim, rather than equality of outcome - with a focus on lifting the lowest incomes, not reducing the highest ones. Labour gave priority to reducing child and pensioner poverty, through a series of reforms. It increased the share of national income provided through cash transfers to children and pensioners, and increased the value of their cash transfers relative to the poverty line. By contrast, spending on other transfers to working-age adults fell as a share of national income from the level Labour inherited, while benefits for those without children fell further below the poverty line. By the end of the period, both child poverty and pensioner poverty had fallen considerably, in circumstances where child poverty would have risen without the reforms (and pensioner poverty would have fallen less far). However, poverty for working-age adults without children increased. The risks of poverty converged between children, their parents, pensioners, and other working age adults. Being a child or a pensioner no longer carried a much greater risk of living in poverty than for other age groups. Overall, income inequality was broadly flat, comparing the start and end of Labour's term in office. But differences in net incomes between age groups were much lower. The smoothing of incomes that occurred across the life cycle could be seen as a striking, if unremarkable, achievement. (RH)

As people aged 50+ get older, they are less likely to have a mortgage, and the amount they owe decreases. However, 21% of all households headed by someone aged 50+ had outstanding mortgage borrowing on their main home in 2008-10. Among the over 50s with outstanding mortgages, the mean average owed was £62,200; and 13% of all older mortgaged households were struggling to repay their mortgage. This report examines research on three key areas: the effect of age in predicting mortgage borrowing in older households; the relationship between age and heavy mortgage borrowing; and the likelihood of older mortgaged households having difficulties in meeting their monthly mortgage payments. This working paper by the Personal Finance Research Centre under its the financial well-being in older age programme of work being, was carried out in collaboration with the International Longevity Centre UK (ILC-UK) and funded by the ESRC Secondary Data Analysis Initiative (SDAI). It is also available on the PFRC website (see: http://www.bris.ac.uk/geography/research/pfrc/esrc/outputs/the-mortgage-debt-of-older-households.html). (RH)

This is the first of a series of papers arising from a programme of research called Social Policy in a Cold Climate, which examines the effects of the major economic and political changes in the UK since 2007, particularly their impact on the distribution of wealth, poverty, inequality and spatial difference. The analysis includes policies and spending decisions from the last period of the Labour government (2007-2010), including the beginning of the financial crisis, as well as those made by the Coalition government since May 2010. This paper considers techniques for measuring the prevalence of income poverty within small areas, or "neighbourhoods", in Britain. Some general criteria for small-area poverty measures are set out; and two broad methods, poverty proxies and modelled income estimates, are identified. Empirical analyses of the validity and coverage of poverty proxies derived from UK administrative data, such as social security benefit claims, are presented. The concluding section assesses a new poverty proxy that will be used within a wider programme of analysis of the spatial-distributional effects of tax and welfare changes and of economic trends in Britain from 2000 to 2014. Particular attention is paid to the relationship between the proxy values and other local poverty measures in different kinds of places. These suggest that the proxy is an adequate, albeit imperfect, tool for investigating changes in intra-urban distributions of poverty. (RH)

Eighty something: new approaches to banking for the older old: project report; by John Vines, Andrew Monk (eds), New Approaches to Banking for the Older Old project. [Newcastle]: New Approaches to Banking for the Older Old project, February 2012, 69 pp.

Modern digital banking systems do not fit with the requirements of many older people. The aim of this project within the Research Councils UK Digital Economy Theme is to work closely with the over eighties (eighty somethings), to make recommendations for new, more inclusive banking products that meet their real needs. Working with people in their eighties and nineties was a team of researchers from the Department of Psychology at the University of York, the Culture Lab at Newcastle University, and the Design School at Northumbria University. The project was funded by Research Councils UK Digital Economy Theme and the Social Inclusion through the Digital Economy (SiDE) research hub. The eighty and ninety year olds who worked with the researchers saw great value in cheques for certain kinds of payment; they also take pleasure in thrift, and wish to avoid getting into debt. The financial products that were designed to meet their needs were digital cheques, a secure PIN reminder, and the Guardian Angel Card, a sort of pre-payment card. The website http://www.eightysomething.org/ provides links which neatly focus on the individual themes and designs that were explored. Appendices include reprints of the authors’ research papers published in the course of the project. (RH)

Health and Social Care in the Community, vol 20, no 6, November 2012, pp 617-624.

The importance of economic well-being is recognised in recent UK Government policy. Older people may be particularly vulnerable to economic fluctuations as they are reliant on fixed incomes and assets which are reducing in value. Within the literature, little is understood about the impact of the current economic downturn on people's general quality of life and well-being and, in particular, there is little research on the financial experiences and capability of the older age group, a concern in light of the ageing UK population. This article reports a qualitative research study into the nature of older peoples' vulnerability by exploring their perceptions of the impact of the economic recession on their well-being and quality of life. It explores specifically a group of older people who are not the poorest within the ageing population, but who may be described as the 'asset rich-income poor' group. Key themes relate to the impact of the recession on the costs of essential and non-essential items and dimensions of mental, physical and social well-being. Implications for health and social care practice in meeting the needs of older people during times of economic recession are then explored. The paper adds to the debate by demonstrating that the recession is having adverse consequences for older people's quality of life in terms of economic, mental and social well-being, although there is also evidence that some of them are equipped with certain resilience factors due to their money management and budgeting skills. There is widespread recognition that UK households have saved insufficiently in the past: it has been estimated that nine million people are under-saving for their retirement. Tackling the UK's low savings problem is a long-term challenge. This report of a Social Market Foundation (SMF) scenario-planning exercise considers the need to take a long-term approach to resolving this problem. The report highlights important emerging tensions that policy-makers will need to address - now and in the coming decades - to re-build households' financial resilience, and to ensure that individuals save adequately for later life. Life course determinants and incomes in retirement: Belgium and the United Kingdom compared; by Caroline Dewilde.

The study analysed and compared the impact of life course family and labour market experiences on household incomes of older people in Belgium and the United Kingdom. To this end panel data and life history information from the Panel Study of Belgian Households and the British Household Panel Survey were combined. The results showed that old-age income was indeed influenced by previous life course experiences, and that differences between Belgium and the UK could be explained in terms of welfare regime arrangements. Family experiences were found to have a larger impact on old-age incomes in 'male-breadwinner' Belgium, while in Britain labour market events were more important. As social transfers in Britain were more aimed at poverty prevention and less at income replacement, a 'scarring effect' of unemployment persisted even into old age. Also the more one's career was spent in blue-collar work or self-employment/farming, the lower the income in old age. A new finding was that, notwithstanding the high level of 'de-commodification' achieved by the Belgian welfare state, this effect turned out to be significantly stronger in Belgium than in the UK. The authors compare the level, composition and distribution of household wealth in five industrial countries - the UK, US, Italy, Finland and Sweden - by exploiting the harmonized data within the Luxembourg Wealth Study. They examine trends in the UK and the US between the mid 1990s and the mid 2000s. Remaining differences between surveys, variable definitions and coverage are highlighted to the extent that they impact on cross-country comparisons. The Nordic countries have lower average wealth holdings, smaller absolute gaps between low wealth and high wealth households, but high relative measures of wealth inequality. Italian

In the welfare systems of East Asian countries, the income, care and other needs of older people have traditionally been met by the family, supported by what might be termed the first home ownership strategy: widening access to home ownership as a physical, emotional and financial basis of family wellbeing. However recent political, economic and demographic developments have undermined this model. Examining policy responses in the three most advanced East Asian economies, namely Japan, Singapore and South Korea, this paper identifies common tendencies in the ways in which the ability to use home ownership has been strengthened. As a second strategy, home ownership has been used to reduce geographical constraints on family support, while, as a third strategy, governments have introduced mechanisms through which older people are able to release some or all of the equity they have built up through the housing market. These mechanisms include downsizing or converting to a rental solution as well as forms of reverse-mortgage products, some available through private financial institutions and others involving state-organised and state-operated devices.

This study, drawing on a methodology developed by the London School of Hygiene and Tropical Medicine, the 'Minimum Income for Healthy Living (MIHL): Older New Zealanders' investigated the retirement income needs of older New Zealanders living independently in the community. The MIHL was estimated for people living alone, couples, renters and debt-free home owners. Findings revealed that the MIHL estimates were noticeably higher than the universal state pension paid to older New Zealanders. People living alone and those renting their homes were shown to be worse off than couples and debt-free home owners, respectively. The results highlight that many older New Zealanders are living on an income which may not be enough to support a healthy life. This has important implications for the demand for health, residential and social services and questions the level of income needed for healthy retirement.

Older savers report: the impact on older people of savings accounts where interest rates have dropped from their initial rate to negligible amounts; by All Party Parliamentary Group for Ageing and Older People - APPG. London: All Party Parliamentary Group for Ageing and Older People, October 2012, 14 pp.

The report focuses on the impact on older people of savings accounts which drop from their initial interest rate to negligible amounts, even though the same bank may offer better rates on the same terms for new customers. It combines previous research with some first-hand experiences of older people. It recommends ways in which the Government and the new Financial Conduct Regulator (FCA) uses powers to tackle the problem: reward loyal savers; make savings accounts more transparent; having simple products; and making savings accessible to everyone.

The measurement of poverty as 'consistent' poverty offers a solution to one of the primary problems of poverty measurement within social policy of the last three decades. Often treated as if they were synonymous, 'indirect'
measures of poverty, such as low income measures, and 'direct' measures, such as indices of material deprivation, identify surprisingly different people as being poor. In response to this mismatch, a team of Irish researchers put forward a measure which identified respondents as being in poverty when they experienced both a low standard of living, as measured by deprivation indicators, and a lack of resources, as measured by a low income line. Importantly, they argued that the two measures required an equal weight. The author presents a reconsideration of the consistent poverty measure from both conceptual and empirical perspectives. In particular, he examines the claim that low income and material deprivation measures should be given an 'equal weight'. He argues that, from a conceptual perspective, the nature of the indicators at hand means that a deprivation-led measurement approach might be understood to align with the definition of poverty outlined by Nolan and Whelan; and, from an empirical perspective, that it is the material deprivation measure - and not the low income measure - which is particularly effective in identifying individuals at risk of multiple forms of deprivation. Research from around the Western World has shown that psychological, socioeconomic and demographic factors can influence levels of financial planning. This study uses data from the Ageing Baby Boomers in Australia Study to determine the effects of these factors on financial planning for 709 employed Australians nearing retirement. The results show that higher income, future time perspective (FTP) and financial knowledge independently predicted levels of retirement planning. The effects of FTP and financial knowledge on financial planning were consistent across levels of socioeconomic status. While similar issues in financial planning appeared across socioeconomic status, a 'one size fits all' approach to retirement policy may not be effective. Instead, policy should be targeted towards the diverse needs of different groups. Raising public awareness of FTP and financial knowledge may provide a useful starting point. (RH)

This paper examines trends in the distribution of household wealth in Great Britain from 1995 to 2005 using the British Household Panel Survey (BHPS). The data show that wealth is very unevenly distributed, and reveal a widening absolute gap over the period between wealthier households and those with no or negative wealth. However, in relative terms, wealth grew fastest for households in the middle of the distribution; and inequality measured by the Gini coefficient decreased. This mainly reflected housing wealth becoming a greater share of total net worth, more equally distributed, and the highest percentage increase in housing wealth taking place in the middle of the distribution. To estimate the distributional impact of the remarkable rise in house prices which defined this period, the authors simulate the distribution of net 2005 wealth in the hypothetical scenario in which house prices remained at their 1995 levels in real terms. They find that the reduction in wealth inequality is almost entirely accounted for by changes in house prices. The paper also finds that, controlling for factors such as age, households that gained most from the house price boom were mortgagors, in particular those that were initially wealthier, and were advantaged in other ways such as by level of educational qualification. 2011

With substantial and increasing numbers of frail and cognitively impaired older people living in the community, there are growing challenges associated with money handling. Financial abuse of people with dementia or declining cognitive and physical functioning is of growing concern. It is equally important to protect
professionals and carers from unfair allegations of financial abuse as it is to safeguard the assets of vulnerable older people. These findings report on a project which aimed to examine real world judgment and decision-making in relation to professional detection of elder financial abuse. The focus was on professionals in health, social care, and banking. Study participants took part in interviews, as well as judging case scenarios. Policy documents were analysed to explore how suspected abuse was defined and managed within local authority, NHS and banking procedures. (RH)

Financial support and practical help between older parents and their middle-aged children in Europe; by Christian Deindl, Martina Brandt.

Financial support and practical help between older parents and their middle-aged children vary greatly among the regions of Europe. Northern and Western Europe is characterised by a high likelihood of practical help to and financial transfers from parents, while in Southern and Eastern Europe these kinds of support are much less likely. Financial transfers to parents show an almost opposite distribution, with more children supporting a parent in Southern and Eastern welfare regimes. Using the second wave of the Survey of Health, Ageing and Retirement in Europe encompassing 14 European countries conducted in 2006-07, these country differences can be linked to different social policies. Controlling for different aspects of country composition in terms of individual characteristics and family structures impacting on intergenerational support, it was found that the more services and transfers provided publicly, the more people aged 50 or more years helped their older parents sporadically, and the less monetary support they provided. On the other hand, generous public transfers enabled parents aged 64 or more years to support their offspring financially. Thus, neither ‘crowding in’ nor ‘crowding out’, but a modification of private transfers depending on public transfers and vice versa is found, suggesting a specialisation of private and public support. (JL)

The author uses data on the value of housing wealth and other property and land from the British Household Panel Survey (BHPS) to examine how the distribution of wealth has been changing in the UK over the period 1995 to 2005. Also examined is how the sum of inheritance received between 1996 and 2005 contributed to observed trends in wealth accumulation and wealth inequality. The BHPS data confirms the substantial growth in net worth and of a substantial decrease in wealth inequality recorded in the survey. The main driver behind both trends was the rise in house prices and the resulting increase in the housing equity of middle wealth-holders. Inheritances were highly unequally and had a positive (but rather small) correlation with pre-inherited wealth. This meant that inherited wealth accounted for part of the observed inequality of net worth in 2005. However, some significant inheritors started with low initial wealth (and this was true within each age group).

Money and happiness: does age make a difference?; by Chang-Ming Hsieh.

Ageing and Society, vol 31, part 8, November 2011, pp 1289-1306.

This study examined the relationship between money and happiness across different age groups in the United States. Even after controlling for major socio-demographic variables, income was found to have a significant positive association with happiness for young and middle-age adults but not for older adults. Also the effect of household income on happiness was significantly smaller for older adults than for young or middle-age adults. The relationship between household income and happiness no longer differed significantly across age groups after social comparison variables were included. The relationship between income and happiness did not vary significantly by age group after controlling for major socio-demographic variables. (JL)

The evolution of the annual flow of inheritances in the UK during the period 1984-2005 is documented, along with estimates for the overall magnitude and the distribution of inherited wealth. The analysis uses: Her Majesty's Revenue and Customs (HMRC) published statistics on estates passing on death (1984-2005); the 2004 Attitudes to Inheritance Survey (AIS) which provides information on lifetime transfers; the 1995/96 General Household Survey (GHS) and the British Household Panel Survey (BHPS) which provide respectively information on inheritance received during the period 1986-1995 and 1996-2005. The focus is on intergenerational inheritance, since these are more directly relevant in debates about the intergenerational transmission of wealth inequality. The results indicate that the annual flow of inheritance increased markedly, from £22 billion in 1984 to £56 billion in 2005. The main reasons behind this increase were the rise in house prices, and, to a lesser extent, the increase in the proportion of inheritances which included housing assets. The results, based on analysis of survey data, show that the distribution of inheritances is characterised by a very high degree of inequality and that this has increased over time. The results also show that inheritance is positively associated with socio-economic status, and that the disparities between groups became slightly more pronounced over time (mainly across educational groups). However, the evidence is that for the majority of recipients inheritance is fairly small, and that large inheritances are limited to a very small minority of the population. (RH)

The Coalition Government has removed the effective requirement to purchase an annuity by the age of 75; and from April 2011, it will allow people to access their pensions savings in a more flexible way. This discussion paper explores how the new legislation could impact on the risks people face when accessing private pensions savings and on individual outcomes in retirement. It examines income needs in retirement; explores trends in how those with Defined Contribution pension savings access their private pension savings; explores the potential impact of removing the requirement to annuitise by age 75; explores the potential impact of those who earned low or median incomes during their working life. The way we pay: payment systems and financial inclusion; by Age UK. London: Age UK, 2011, 65 pp. A secure, convenient and affordable method of paying for things is an essential part of everyday life. For many people, cheques are an essential payment method that is often the only way to access essential services at no extra cost or risk. This report explores the essential payment mechanisms and banking services to which an individual must have access in order to be financially included. It set out to learn from other countries and from other industries. It also uses quantitative research from face to face interviews carried out by Ipsos MORI in February 2011 with a representative sample of 1255 adults in the UK aged 18+, boosted for age, so that at 469 respondents were aged 65 or over. The report was written in the light of proposals to withdraw cheques as a...
means of payment from 2018, which has since been rescinded. However, the report is not just about cheques or age, but about how individuals use the payment services currently available to them. (RH)

2010

"Reciprocity" implies "equal or comparable exchange" of resources between individuals or groups, while "intergenerational relations" refers to different levels of relationships between the generations as well as family relations in general. Contributors to this book explore the exchange of support between generations, and examine variations in contemporary practices and rationales in different regions and societies around the world. They review key theoretical and conceptual debates around intergenerational relations, and offer new insights and an understanding of exchange practices based on case studies from different regions and relationships. These include: housing wealth and family reciprocity in East Asia; grandparents and HIV and AIDS in sub-Saharan Africa; spiritual debt and the notion of "dutiful daughter" in Thailand; and reciprocity in intergenerational relations in step-families in the US. The editor concludes by discussing whether new patterns of family reciprocity are emerging. (RH)

Around a million older home-owners have at least £100,000 of housing equity, yet their incomes are so small that they qualify for means-tested benefits. If these people could draw on their housing equity easily and safely, they could afford practical help which would improve their quality of life and make it possible for them to continue to live in their own home. The Joseph Rowntree Foundation (JRF) has been working with interested local authorities, the equity release industry and their representative body SHIP (Safe Home Income Plans) to find an equity release product designed especially for home-owners on Pension Credit. Three local authorities (Islington, Kensington & Chelsea, and Maidstone) are now piloting equity release schemes to be independently assessed by JRF. Part 1 of this Solutions looks at how the equity release product (the Home Cash Plan) was developed, how the pilot authorities devised their schemes, and how the assessment will be carried out. Part 2 provides a toolkit for local authorities interested in pursuing equity release schemes in their own areas. (RH)

Financial capacity is a critical issue of autonomy for older people. However, determining the point at which a cognitively impaired older adult is no longer capable of independent financial management poses an onerous task for family members, and health and legal professionals. At present, there is no agreed-upon standard for evaluating financial capacity, and issues pertaining to the level of impairment that constitutes incapacity remain largely unresolved. In the absence of validated assessment guidelines, determinations of capacity are frequently based on neuropsychological measures and clinical judgment, although there is limited evidence to support the validity of these methods in capacity determinations. In this paper, various cognitive, psychiatric, social and cultural factors that potentially contribute to financial incapacity in older adults are described. The strengths and weaknesses of clinical approaches and instruments currently used in capacity determinations are evaluated, and specific recommendations are made regarding broader assessment approaches. Finally, directions for future research and instrument development are offered. (KJ)

A large number of households, including some of those on low incomes, own their own homes outright, others are in the process of buying them. Over time, they may need to draw on the store of wealth represented by that home. This report examines how households currently access this wealth, must obviously trading down and remortgaging for equity withdrawal. As formal equity release seems to one of the less significant channels, this report suggests how and what government policies might help in a period of reduced public expenditure. This report is published alongside a second paper, 'Funding future care need: the role of councils in supporting individuals to access the capital in their homes', also available from the Resolution Foundation website. (RH)

Housing and finance in later life: a study of UK equity release customers; by Louise Overton, University of Birmingham; Age UK. London: Age UK (electronic format), June 2010, 41 pp.
In the current recession, older people's ability to maintain a decent standard of living has been exacerbated by reduced incomes, especially from savings. Evidence of increased expectations of the baby boom generation could mean an increased willingness to use housing assets to this end in later life. This research report presents findings of a survey of 553 equity release customers and 26 follow-up semi-structured interviews. It sheds light on the sorts of people who take out equity release plans, what they do with the money, and their satisfaction or dissatisfaction with the plans. It also reveals their views on related topics such as inheritance, responsibility for financial security in later life, and retirement strategies (house vs pensions). It also includes data on different aspects related to taking out an equity release plan. The report looks at respondents' characteristics and attitudes to financial provision in retirement; their experiences of equity release purchase; and the role of equity release plans in respondents' financial situation. (RH)

Informal finance and the urban poor: an investigation of rotating savings and credit associations in Turkey; by Sebnem Eroglu.
Rotating savings and credit associations (roscas) refer to a form of informal financial organisation composed of members who make periodic payments to a fund which is given to each contributor in turn. The term "rotation" indicates each member's turn to receive the fund or lump sum. This study focuses on the organisation among poor households of rotating savings and credit associations locally known in Turkey as gün. Based on a longitudinal study of 17 households, the research demonstrates the distinctive ability of various güns to operate smoothly under inflationary conditions. Unlike the predominant portrayal of güns as a leisure activity for middle-class women, they are shown to act as a self-welfare instrument, whereby poor households acquire the discipline of saving towards both their consumption and investment needs. Contrary to the conventional view, these households are found to use güns in circumstances where formal credit and savings options are available. (RH)

Inheritance and the family; attitudes to will-making and intestacy; by Alun Humphrey, Lisa Mills, Gareth Morrell (et al), National Centre for Social Research - NatCen; Cardiff University. London: National Centre for Social Research - NatCen, 2010, 4 pp (Research Findings).
The researchers investigated public attitudes as to how inheritance should be dealt with in law, both when a will is made and in cases of intestacy (where someone dies without making a will). Funded by the Nuffield Foundation, this study was conducted to inform a review of the law of intestacy by the Law Commission for England and Wales. The findings show that the current law largely reflects public attitudes, but that on key issues such as the entitlement of cohabitants, the intestacy rules may need updating. The study involved an
attitudinal survey of 1556 adults across England and Wales, and 30 qualitative in-depth interviews. The full report (same title) is available on the NatCen website (http://natcen.ac.uk/our-research/research/inheritance-and-the-family/). (RH)

The low earners audit: March 2010 update: low earners’ finances March; by Resolution Foundation. London: The Resolution Foundation (electronic format only), March 2010, 175 pp. The Resolution Foundation defines low earners to include all those with below median income (from all sources) who are not dependent on state support. This report considers the low earning group to comprise those households in income deciles 3, 4 and 5; that is, with equivalised gross annual income between £13,500 and £25,800. Around 7.2 million households fall into this category in the UK, accounting for around 14 million adults. The audit attempts to present a broad description of some of the pressures faced by those who are disadvantaged by the mixed economy, an experience which has been heightened by the recession. This update considers low earners’ household finances during an economic downturn. Appendices provide economic indicators, a range of low earner data, the various technical definitions of low earners used, and brief details of a low earner focus group commissioned by the Foundation in June 2009. (RH)

The meaning of money: why homeless and vulnerable people see money as a route to security, respect and freedom: a Lemos & Crane report and workbook; by Gerard Lemos, Lemos & Crane; Thames Reach. London: Lemos & Crane, 2010, 68 pp. Support workers for homeless and vulnerable people help with sorting out benefits and budgeting. In addition, the government has emphasised the need to improve financial inclusion and financial capability. This report and workbook has been funded by the Esmée Fairbairn Foundation, and is based on a questionnaire drawn up in consultation with 14 support workers from Thames Reach, and interviews conducted with 63 service users, men and women of all ages. This report looks at and quotes service users’ attitudes, experience and behaviour towards money; factors leading to financial problems now and in the past; the importance of savings; experience of borrowing and debts; and using money to meet aspirations. The Workbook (pp 52-68) provides a set of 5 structured sessions on: attitude to money; budgeting and spending; banking and saving; borrowing and debt; and looking to the future. Each session includes 8-10 questions to use in discussions about money with service users, followed by a set of ideas for action planning which suggest further sources of information (mainly free websites). Minimum income standards and household budgets: (Social Policy Association prize-winning paper); by Chris Deeming, Social Policy Association. Bristol: Policy Press, 2010, pp 97-117. IN: Social Policy Review, 22, Chapter 5, 2010, pp 97-117. This inquiry attempts to determine food poverty lines for an older population. The author uses data on household expenditure and food consumption from the Office for National Statistics’ (ONS) Expenditure and Food Survey (EFS), a particularly useful source as each member of households participating uses 2-week diaries to record all food spending. 3 years of EFS data (2002-2005) provide a sample of 5,500 households aged 60+ (3,000 older singles and 2,500 older couples). The author aims to determine budget adequacy by considering the total level of household expenditure required to meet minimum dietary standards for good health. Using a logistic regression model, he finds that the budget line of £110 per week for singles corresponds to the point where 90% are expected to meet the minimum dietary standard; and for couples, £170 per week corresponds to nearly 80% predicted to meet the standard. Further modelling with discriminant function analysis (DFA) helped
to confirm these findings. It is suggested that the Pension Credit guarantee could be sufficient to keep most pensioners with low incomes out of "absolute" poverty. The author concludes by noting that ONS is integrating a number of national surveys including the EFS into a single household survey. This new Integrated Household Survey (IHS) should allow us to examine aspects of poor nutrition and other forms of material deprivation in more detail. (RH)

What drives the perceptions of pension savings adequacy and what do workers expect to receive when they retire? These questions are assessed among married workers using an identical survey distributed to Dutch and American workers in 2007. Despite marked differences in expected pension replacement rates - where the Dutch replacement rates are systematically higher than the American rates - the perceived savings adequacy is more or less the same across Dutch and American workers. In both countries, about half of the respondents were confident they had amassed sufficient retirement savings. Individuals' perceived savings adequacy was found to be influenced by three groups of factors: trust in pension institutions (pension funds, banks, insurance companies and governments), social forces, and psychological dispositions. This study shows that differences in the dispositions of workers (with respect to future orientation and financial planning) played a far larger role in explaining differences in perceptions of savings adequacy in the United States than in The Netherlands. Dutch workers rely and trust their pension fund and seem to leave thinking about and planning for retirement to its managers. (KJ/RH)

Many Black and minority ethnic (BME) people in the UK are in low income self-employment. They face challenges to saving and contributing to a decent pension and enjoying a retirement free from poverty. This report looks at the relationship between BME self-employment and pensions. It examines the level and type of pension provision people have and the barriers they face in light of reforms in the Pensions Acts 2007 and 2008. These reforms have been in response to an ageing population, lower annuities offered by company pension schemes, and the fact that people are less likely to prioritise personal savings than in the past. Automatic enrolment of employees into workplace pension schemes and changes to the state pension age (SPA) are central features of these reforms. Key issues are illustrated with examples from Runnymede's research among Bangladeshi and other BME communities, as well as from official sources published by the Department for Work and Pensions (DWP) and the Office for National Statistics (ONS). This publication is part of the Runnymede Financial Inclusion Programme and funded by the Nationwide Foundation. (RH)

Released from worry: [equity release schemes]; by Jeremy Dunning. Community Care, issue 1803, 28 January 2010, pp 24-25.

Older homeowners on benefits have long shunned equity release schemes, but a project is helping them to tap their housing wealth to boost their independence. This article outlines the findings of a report from the Joseph Rowntree Foundation (JRF), 'Can equity release help older home-owners improve their quality of life?'. by Rachel Terry and Richard Gibson (JRF, 2010). It describes how the Home Cash Plan, an equity release product designed especially for home-owners on Pension Credit, is being piloted in Islington, Kensington & Chelsea, and Maidstone. The suitability of this financial product will be assessed by JRF. (RH)

This is the fourth in a series of research reports on retirement income and assets in the UK. This report considers the income and assets that a future generation of pensioners, reaching state pension age in 2030, may have to support retirement. It gives an overview of the income needs of pensioners, how their needs for retirement income vary over time, and how levels and sources of income tend to change for pensioners during retirement. It

29
uses hypothetical case studies to explore how individuals may use income and assets to support retirement in the future. It examines, in turn, the roles of state pensions, private pensions, other financial assets, and housing in retirement and how these might change in the future. This series has been sponsored by Age Concern and Help the Aged (Age UK), the Association of British Insurers (ABI), the Department for Work and Pensions (DWP), the Investment Management Association, J P Morgan Asset Management, and Prudential. The authors use a comprehensive theoretical framework to explain why parents send money to particular children; and they examine whether intergenerational solidarity is shaped by spending on various welfare domains or provisions as a percentage of gross domestic product. The theoretical model at the level of parents and children distinguishes parental resources and children's needs as the factors most likely to influence intergenerational money transfers. Differences in state spending on various welfare domains are then used to hypothesis in which countries children with specific needs are most likely to receive a transfer. For parents, the authors hypothesise in which countries parents with specific available resources are most likely to send a transfer. They use data from the first wave of the Survey of Health and Retirement in Europe (SHARE) to analyse the influence of welfare state provisions on the likelihood of intergenerational transfers in ten European countries. The results indicate that, in line with the authors' expectations, the likelihood of a transfer being made is the outcome of an intricate resolution of the resources (ability) of the parents and the needs of a child. Rather large differences between countries in money transfers were found. The results suggest that, at least with reference to cross-generational money transfers, no consistent differences by welfare state regime were found. (RH)

The pensions and savings industry has suffered an erosion of trust, fuelled by mis-selling scandals, excessive costs and a long period of poor investment returns. This paper makes 16 proposals to help simplify saving and improve flexibility. These involve bring individual savings accounts (ISAs) and pensions closer together, while enhancing incentives to save. It also discusses four alternatives for a unified tax framework for ISAs and pension savings products. An annual contribution limit of £45,000 is proposed for all tax incentivised saving, along with limited pre-retirement access to pension savings. Among other proposals are: broadening auto-enrolment of savings to include ISAs; allowing pensions assets to be bequeathed free of inheritance tax; and addressing gender inequality for example by allowing couples to contribute to each other's pension savings. The author considers the perspectives of, and implications for, savers, employers, the pensions and savings industry and HM Treasury. The report is based on the author's detailed consultation with politicians from the major parties and with leading experts. (RH)

This article employs a political economy approach to assess the changing nature of women's pension provision. Initially it provides an overview of the current context showing that many female pensioners are without access to significant pension entitlements in their own right. Then it examines the history of women's pensions over the last 30 years with reference to both state and private forms of provision. It considers the pension strategies of the Thatcher and New Labour governments and their impact on women's pension situation. This includes an evaluation of recent New Labour proposals, such as Personal Accounts, a raise in the basic State Pension age
(SPA) and reintroduction of the link to earnings. Finally, the paper concludes that these proposals do not represent the emergence of a new political economy of pensions which better reflects the needs of female pensioners; rather, they are a response to the challenges of an ageing population. Ageing, income and living standards: evidence from the British Household Panel Survey; by Richard Berthoud, Morten Blekesaune, Ruth Hancock.

In Britain, older people have lower average incomes and a higher risk of income poverty than the general population. Older pensioners are more likely to be in poverty than younger ones. Yet certain indicators of their living standards suggest that older people experience less hardship than expected, given their incomes. A possible explanation is that older people convert income into basic living standards at a higher rate than younger people, implying that as people age, they need less income to achieve a given standard of living. Much existing evidence has been based on cross-sectional data and therefore may not be a good guide to the consequences of ageing. The authors use longitudinal data on people aged at least 50 years from the British Household Panel Survey (BHPS) to investigate the effects of ageing on the relationship between standard of living, as measured by various deprivation indices, and income. They find that for most indices, ageing increases deprivation and controlling for income and other factors. The exception is a subjective index of "financial strain", which appears to fall as people age. Evidence of cohort effects are also found. At any given age and income, more recently-born older people in general experience more deprivation than those born longer ago. To some extent, these ageing and cohort effects balance out, which suggests that pensions do not need to change with age. (RH)

The author briefly describes the current position of many American families who find their retirement shadowed by financial insecurity. Only half of families have saved in any kind of retirement account; and, among those who have, the typical family has saved about US$35,000. As many as 75 million American workers work for an employer who does not sponsor a retirement plan, which represents approximately 50 percent of the American workforce. This situation will need to be redressed through public policies to boost individual levels of savings and thereby promote retirement security. The recent pension reforms undertaken in the United Kingdom are cited as an example the US Government should consider following. The author is the Chief Operating Officer for AARP. (KJ/RH)

Clergy and retirement: an exploratory study on housing and financial preparedness; by James L Knapp, Charles D Pruett, Jennifer L Hicks.

The body of research on retirement has expanded in recent years, but the experience of clergy members has rarely been examined. In response to the void, the present study explored the financial and housing options that will be available to members of the clergy of a nondenominational fellowship when they reach the age of retirement. The results indicate that financial preparedness varies greatly based on factors such as age, years in ministry, size of the church being served, and whether one intends to fully retire. Similarly, housing options vary greatly and are related to financial well-being. A primary implication of the findings is the need for pre-retirement education designed specifically for the unique circumstances of clergy members and those who hire them. (KJ/RH)
This report contains in-depth analysis about how the economic downturn is affecting low earning households - that is, the 14.3 million adults living in 7.2 million households on below median income, who remain broadly independent of state support. Low earners are more at risk of being hit by the effects of recession than other groups, by virtue of the industries and occupations in which they work, and the areas that they live in. The Resolution Foundation's analysis indicates that despite a swift response by government, further action is both necessary and feasible, so as to prevent a more stratified labour market and greater polarisation of income within society. (KJ/RH)

Coping with the crunch: the consequences for older people; by Age Concern and Help the Aged. London: Age Concern and Help the Aged, July 2009, 8 pp (Economy in crisis).
The effects of the recession are as important to older people as other age groups. Evidence in this research review is based on unpublished surveys for Age Concern and Help the Aged by ICM Research. It finds that 60% of older workers say that the economic downturn means they may need to work for longer than they had originally planned. However, more than one in five fear that the recession could force them to stop work sooner than they expected. As for people in retirement, 59% of those aged 60+ are not confident that the Government will help older people cope during the recession. This review cites examples from other research sources and newspapers concerning older workers in the recession; declining pensions and assets; older savers; the changing face of pensioner poverty; financial education and debt; struggling local economies; and crime and scams. Age Concern and Help the Aged believe that these challenges must be tackled urgently, before a short-term crisis leads to disadvantage for vulnerable older people. (RH)

Demographic determinants of necessary dissaving among older persons; by Jeromey B Temple, Peter D Brandon.
Because of population ageing, many governments are placing greater responsibility on older persons to fund their retirement. Within this context, older persons' financial self-sufficiency during times of stress is important to understand. Using data from the 2002 Australian General Social Survey, this article reports on the prevalence of older persons drawing on financial resources to meet the cost of everyday living expenses when current income is insufficient, identifies the kinds of resources older persons draw on to meet the costs of everyday necessities, and estimates the effects of demographic factors on different necessary dissaving strategies. (Dissaving is defined according to Bannock, Baxter and Rees's definition (1979), as drawing down existing wealth or borrowing against future income). Results indicate that about 11% of older persons find it necessary to employ some type of dissaving strategy, and that the factors associated with asset dissaving differ from the factors associated with liability dissaving. Future research needs to examine the effects of unanticipated events on necessary dissaving and alternative motives for dissaving. (KJ/RH)

Age Concern and Help the Aged comment on Ofgem's consultation investigating the direct debit arrangements of energy companies. Many older people have been finding that energy companies have increased direct debits, even for customers with relatively large credits, and that increases have been greater than any price increases. There is agreement with Ofgem's analysis of lack of transparency and poor communication on the part of energy suppliers. (RH)

The effect of health on consumption decisions in later life: evidence from the UK; by Eleni Karagiannaki, ESRC Centre for Analysis of Social Exclusion - CASE, Suntory-Toyota International Centres for Economics and

Whether filial piety or financial support to older parents is eroded or maintained through societal modernisation is an unresolved issue in China and a matter of widespread concern. Whereas structural-functionalist theories predict erosion, alternative views suggest that modernisation reduces filial piety only minimally or conditionally. One possible condition that resists the modernisation effect is education. The impacts of modernisation and its interaction with Chinese education are therefore the focus of this study. Using various sources, the paper reports analysis of the relationships between the levels of modernisation in six Chinese cities, measured by average gross domestic product (GDP) per capita, the average wage, and the percentage of the workforce that are employed in the service sector, and variations in expressions of filial piety and cash payments to parents. Representative samples of the cities' adult residents were used. It was found that filial piety and cash payments were lower when the citizen was in a city with higher or more modernisation, and that the reduction in affirmations of filial piety associated with higher modernisation was less among citizens with higher education. It is concluded that educational policy and practice can be a means to sustain filial piety in the face of modernisation. (RH)

European Commission consultation: Review of Directive 94/19/EC on Deposit Guarantee Schemes: [summary of] consultation response; by Jane Vass, Age Concern and Help the Aged. London: Age Concern and Help the Aged, July 2009, 3 pp (Consultation response, Ref: 4109(S)). Since 1994, the European Union Directive 94/19/EC on Deposit Guarantee Schemes (DGS) has ensured that all Member States have a safety net for depositors in place, should banks fail to pay. Events in 2007 and 2008 have led to depositors having decreased confidence in financial institutions’ handling of payments and savings. Age Concern and Help the Aged comment on the DGS review. (RH)

The expenditure experience of older households; by Andrew Leicester, Cormac O'Dea, Zoë Oldfield, Institute for Fiscal Studies - IFS, London: Institute for Fiscal Studies - IFS, 2009, 115 pp (IFS Commentary C111). This Commentary examines detailed trends in expenditure patterns between 1995 and 2007, with a particular focus on the pensioner population. Pensioners are not a homogeneous group, but differ widely in both their levels and patterns of spending - by age, income and household composition, for example. Spending may tell us something about household welfare that other, often-used measures like incomes do not. In particular, it may be that spending is informative about long-term well-being, whereas income is more about current, short-run living standards. The authors use the Family Expenditure Survey (FES) (now the Expenditure and Food Survey, EFS), an annual, cross-sectional study of the spending patterns of 6,000-7,000 households. They look in depth at changes in the level of real expenditures and how spending patterns have changed over time on housing and non-housing expenditures. They use data from two waves of the English Longitudinal Study of Ageing (ELSA) to examine household fuel expenditures in detail. Fuel is clearly of great current policy concern, given recent large increases in the price of domestic fuel that may impact particularly severely on poorer and older households. Differences between spending patterns of pensioners in the richest fifth compared to pensioners in
the poorest fifth and to non-pensioners in the richest fifth are highlighted. There is some evidence that between 2001 and 2007 pensioners began to catch up somewhat to non-pensioners in terms of their spending. However, since then, dramatic changes in food and domestic fuel prices may have substantially affected expenditure. (RH) From: Download from website: http://www.ifs.org.uk/comms/comm111.pdf

When a person's life partner dies, there are often many changes in financial and economic arrangements for the bereaved member of the couple. While much research has explored the psychological impact of death of a partner, little is known about the financial implications, especially people bereaved under pension age. This study investigated the financial and economic transitions of people whose partner died and explored their views and feelings about these experiences. The study mixed quantitative and qualitative methods, including in-depth interviews with 44 people at different life stages whose partner had died recently. Also used was longitudinal data from the British Household Panel Survey (BHPS) from more than 750 couples where one partner had died. Findings focus on the financial consequences of bereavement including: income changes; dealing with administration; immediate financial demands; managing money; spending patterns; and the grieving process. The full report of this study - which was funded by the Economic and Social Research Council (ESRC) - can be downloaded from the SPRU website (http://www.york.ac.uk/inst/spru/research/pdf/Bereavement.pdf). Financial Services Authority consultation 09/11: FCSC: temporary high deposit balances and implementing changes to the Deposit Guarantee Schemes Directive: [summary of] consultation response; by Jane Vass, Age Concern and Help the Aged. London: Age Concern and Help the Aged, June 2009, 3 pp (Consultation response, Ref: 3609(S)).

The Financial Services Authority (FSA) is seeking views on whether the Financial Services Compensation Scheme (FCSC) should provide extra protection for holders of temporary high deposit balances in the event of the failure of a UK bank, if the European Union (EU) Deposit Guarantee Schemes Directive provides the UK with the scope to provide such protection. Age Concern and Help the Aged comment on the FSA's proposals which are generally welcomed, but does not support the proposal that the special treatment should be time-limited. (RH)

Financial Services Authority CP 09/06 Regulating sale and rent back: an interim regime: summary [of] consultation response; by Jane Vass, Age Concern and Help the Aged. London: Age Concern and Help the Aged, May 2009, 2 pp (Consultation response, Ref: 2509(S)).

Age Concern and Help the Aged comment on an area of consumer protection affecting older owner occupiers involved with "lifetime lease" schemes and sale and rent back (SRB). (RH)

Financial transfers to husbands' and wives' elderly mothers in Mexico: do couples exhibit preferential treatment by lineage?; by Claire Noël-Miller, Rania Tfaily.

The aim of this study was to contrast the likelihood that a husband's aged mother receives financial assistance from a couple with that of a wife's mother. Previous US-based research has documented a strong bias toward transfers to wives' parents. The authors aimed to extend this literature to Mexico, where financial help from adult children is a critical source of support for a rapidly ageing population lacking institutional assistance. The authors' approach to modelling competition between mothers accounted for the nature of their need. Based on data from the Mexican Health and Aging Study (MHAS), the results demonstrate that among mothers of similar financial need, a husband's mother is twice as likely to receive financial assistance as a wife's mother. In contrast, when faced with personal care needs, a wife's mother is disproportionately favoured. These results reflect gender differences in Mexican adult children's responsibility for family members' financial and physical well-being. The findings uncover new complexity in the patterns by which couples transfer money to parents of different lineage. (KJ/RH)
The impact of out-migration on the inter-generational support and psychological wellbeing of older adults in rural China; by Man Guo, Maria P Aranda, Merrill Silverstein.

The impact of out-migration of adult children on older parents' inter-generational support and psychological well-being of older adults in rural China is examined. The sample comprised 1237 people aged 60+ from 'The wellbeing of older people in Anhui Province' study who completed baseline and follow-up questionnaires in 2001 and 2003 respectively. The differences between older parents with and without migrant children in 2001 in their support and psychological well-being in 2003 were examined using independent t-tests, as were changes over the two years in support and well-being. Multiple regression models were used to examine the impact of baseline out-migration on the psychological well-being of older parents at follow-up. The results showed that, compared to parents without migrant children in 2001, the parents of migrants had significantly more monetary support, less instrumental support, and a lower level of depression in 2003. Such differences may be attributed to different support resources and health status, but the regression revealed that when the positive effect of inter-generational support was taken into account, older parents with more migrant children tended to have significantly more depression and lower life satisfaction. The findings point to the importance of continued inter-generational support after out-migration in maintaining parental well-being. (RH)

Income, wealth and financial fragility in Europe; by Dimitrios Christelis, Tullio Jappelli, Omar Paccagnella (et al).

The article examines the distribution of income and wealth among the generation of Europeans aged 65 and over, using data drawn from the first wave of the Survey of Health, Ageing and Retirement in Europe (SHARE). It looks at how cross-country comparisons of income, wealth and debt are affected by differences in purchasing power, household size and taxation, and shows that some seemingly wide international differences appear less so when the proper adjustments are made. The article reveals wide differences in income, wealth and indebtedness of older households in Europe, and provides background information on social issues such as the adequacy of savings at retirement, and older people's financial fragility. (KJ/RH)

Innovation has the potential to transform privately and publicly provided products and services. This study describes the elements required for innovation to flourish within any given market or sector. It assesses five sectors that relate specifically to older people's quality of life against this system: housing; the local environment; health and social care; social inclusion; and personal finances. It looks at the challenges, barriers and gaps in the innovation system, as well as those innovations deemed to have been more successful. (RH)

Intergenerational support and subjective health of older people in rural China: a gender-based longitudinal study; by Shuzhuo Li, Lu Song, Marcus W Feldman.: Blackwell Publishing, June 2009, pp 81-86.

Using data from three waves of the survey, "Well-being of the elderly in Anhui province, China", conducted in 2001, 2003 and 2006, respectively, this study employs random effect logit models for men and women separately, in order to examine the effect of intergenerational exchanges on subjective health of Chinese rural older people. While an increase in instrumental support from children to older people is associated with the deterioration in older men's subjective health, financial support from older people to children is associated with improvement in the formers' subjective health. Although an increase in instrumental support from older people to children, and mutual emotional support is associated with improved subjective health of older women, financial support from children to older women has a negative effect on the latter's subjective health. Reciprocal intergenerational transfers contribute to improvement in older people's subjective health, while increased support through demand-based transfers appears to result in deterioration of their health. (RH)

London has been particularly vulnerable to the rise in indebtedness since the mid-1990s, given the highest house prices and living costs in the UK. It is now widely accepted that the stress and anxiety associated with indebtedness lead to and accentuate health problems, both mental and physical. Further, early help in dealing with people’s debt problems is often the most effective way of preventing and mitigating associated health problems. This report is part of a project initiated by the London Health Forum to ameliorate the health burden arising from the recession through early debt advice and other preventive measures. It highlights the scale of indebtedness in London and its consequences for health, so encouraging the Primary Care Trusts (PCTs) to work with London’s boroughs to support early use of debt advice as soon as people have worries. (RH)

An ageing population continues to be of policy concern, in relation to meeting the needs of older people now, and for future welfare provision. This overview presents the background to and main findings from a study exploring the changing lives of older people, and shows how resources are used to manage change and maintain stability. The research by the Centre for Research in Social Policy (CRSP) involved interviews with participants (aged 65-84) from 91 households in 2005, of which 78 took part in a second interview in 2007 focusing on experiences over the intervening 2 years. The importance of access to a range of services is highlighted by issues such as managing health decline, whether or not to move house, the constraints of financial circumstances, and changes beyond people's control. More positive was the introduction of free off-peak local bus travel for pensioners (who could access it) to travel more widely; and having a role and sense of purpose also added to their quality of life. The authors’ full report, ‘Managing resources in later life: older people's experience of change and continuity’, is published by the Joseph Rowntree Foundation (JRF) and available as a free download from the JRF website. (RH)

New Labour and pensions reform: security in retirement?; by Barbara Waine.

New Labour has defined the problem of security in retirement as one of under-saving and has sought to resolve it both by measures which encourage saving and by improving financial literacy. The article discusses both of these approaches, arguing that each is flawed and that, in addition, New Labour's pension policy exhibits several tensions which threaten to undermine the objective of providing a secure income in retirement. (KJ/RH)

The Office of Fair Trading (OFT) published its 'Financial services strategy' consultation paper in April 2009. Age Concern and Help the Aged asks OFT to take account of four aspects of policy. First, the interests of disadvantaged consumers. Second, the implications of the Equality Bill currently before Parliament in respect of irresponsible lending, risk pricing of credit products, and the public sector equality duty (the requirement of financial inclusion of older people). Third, the increase of problem debt for those forced out of work in their 50s. Lastly, the wide availability of financial education (not just on the internet), for example OFT’s research on victims of scams. (RH)

Old-age wealth in Mexico: the role of reproductive, human capital, and employment decisions; by Rebeca Wong, Deborah S DeGraff.

The authors examined relationships between the wealth of older adults and their early-life decisions regarding investment in human capital, family formation, and work activities in Mexico, using the 2001 Mexican Health and Aging Study (MHAS). The authors examined correlates of accumulated financial wealth by gender and across three age cohorts: 50 to 59, 60 to 69, and 70 years or older. The authors outline the changing context these cohorts experienced during their lifetimes; describe patterns of net financial worth by main co-variates across groups defined by age, sex, and marital status; and present the results of multivariate models of net worth. Simulations were conducted to illustrate patterns of net worth associated with alternative scenarios depicting differing representative combinations of life-course characteristics by age cohort. The findings suggest that old-age financial wealth in Mexico is more closely associated with family formation and human capital decisions than with employment decisions over the lifetime. (KJ/RH)

Pastors' retirement: crisis beyond the shrinking of social security; by Gyoungsin "Daniel" Park, Ilene Smith-Bezjian.

This article examines the financial aspect of pastors' retirement using pastors from Korean churches in the Southern California area. Although the sample may not exactly reflect the retirement preparation of Korean pastors in Southern California, it is amazing that only a small number of churches consider their pastors retirement seriously and provide help into their retirement years. In addition, the fact that more than 85% of the pastors do not prepare for their retirement brings the seriousness of the problem to attention. The findings that smaller churches and lower salaried pastors have much less retirement savings worsens the situation. The research results will assist church leaders in establishing a plan to provide pastors with a better quality of life in the retirement years. (KJ/RH)

Personal Accounts Delivery Authority consultation 'Building personal accounts: designing an investment approach': [summary of] consultation response; by Jane Vass, Age Concern and Help the Aged. London: Age Concern and Help the Aged, August 2009, 3 pp (Consultation response, Ref: 4209(S)).

The Personal Accounts Delivery Authority (PADA) is responsible for establishing the personal accounts scheme, which will then be managed by an organisation to be known as the Trustee Corporation. Age Concern and Help the Aged comments on PADA's discussion paper, on which it does on have the evidence to take a formal position on the issues being discussed. However, deliberative research should be conducted among the target membership whose needs should be considered. (RH)

Personal Accounts Delivery Authority discussion paper, Building personal accounts: securing a retirement income: summary [of] consultation response; by Jane Vass, Mervyn Kohler, Age Concern England - ACE; Help the Aged. London: Age Concern England; Help the Aged, March 2009, 2 pp (Consultation response Ref: 1309(S)).

The Personal Accounts Delivery Authority (PADA) is responsible for delivering the infrastructure to support the scheme, whereby from 2012, all employers must ensure that eligible workers are automatically enrolled into a pension scheme that meets certain quality standards. Age Concern England (ACE) and Help the Aged outline their views on PADA’s proposals, which they generally support and welcome, but call for help in resolving problems of inflation protection, transparency of annuity pricing, and those with small pension pots. (RH) From: Age Concern England, Astral House, 1268 London Road, London SW16 4ER. www.ageconcern.org.uk Help the Aged, 207-221 Pentonville Road, London N1 9UZ. www.helptheaged.org.uk

Using data from several longitudinal surveys, this paper investigates the relationship between older women's family histories and their personal incomes in later life in the UK, US and West Germany. By comparing three countries with very different welfare regimes, the authors sought to gain a better understanding of the interaction between the life course, pension system and women's incomes in later life. The association between older women's incomes and work histories is strongest in West Germany and weakest in the UK, where there is evidence of a pensions poverty trap and where only predominantly full-time employment is associated with significantly higher incomes in later life, after controlling for other socio-economic characteristics. Work history matters less for widows (in all three countries) and more for younger birth cohorts and more educated women (UK only). They conclude with a brief discussion of the "women-friendliness" of different pension regimes in the light of their analysis. (RH)

Retirement income and assets: how can pensions and financial assets support retirement? A discussion paper; by Daniela Silcock, Sean James, John Adams, Pensions Policy Institute - PPI:. Pensions Policy Institute - PPI, October 2009, 63 pp [Retirement income and assets series].

This report is the third in a series of four reports looking at the evolution of the needs for income during the course of retirement. It considers the respective roles that state and private pensions and other financial assets are likely to play in supporting retirement incomes now and in the future. It explores: the potential effects of reforms on state pensions; the potential effects of changes in private pension provision; and how the baskets of income and assets that people from different income groups have in retirement are likely to change. It analyses the implications that changes in the types of pensions offered by employers may have for the way people convert pension savings into retirement income and the features people might expect from retirement products.

It explores behavioural, economic and structural factors which affect savings and investment decisions, and how changes in the pensions landscape and regulations surrounding tax-privileged savings vehicles may affect the choices people make about saving. It investigates how changes in the profiles of people who need financial advice and information may affect what is required from those providing such advice and information, and discusses proposals and options for this provision. This series has been sponsored by Age Concern and Help the Aged (Age UK), the Association of British Insurers (ABI), the Department for Work and Pensions (DWP), the Investment Management Association, J P Morgan Asset Management, and Prudential.

Taxation at retirement; by Life Academy; TaxHelp for Older People. [3rd ed.] Guildford: Life Academy; TaxHelp for Older People, 2009, 32 pp (A4 booklet).

This handbook has been produced to anticipate and avert the tax problems which can occur at retirement. It is not a complete guide to personal tax, but targeting the salient points affecting the change of financial circumstances at the time of giving up paid employment. Paperwork and forms are also explained; sources of help given and current rates and allowances for 2009/2010. (KJ)

The Government classifies a fuel poor household as one needing to spend more than 10% of annual income on energy costs. In 2007, more than 3 million households were estimated to be in fuel poverty, with older people and those in long-term ill health making up a sizeable proportion. Following the Warm Homes and Energy Conservation Act 2000, the Warm Front Scheme has been a key programme under the UK Fuel Poverty Strategy issued in 2001. This report follows up earlier National Audit Office (NAO) examinations of the Scheme in 1998 and 2003. It focuses on: the extent to which the Scheme has helped those in fuel poverty; services provided to customers; the costs of work done; and management by the Department of Energy and Climate Change (DECC) of its contract with eaga (an outsourcing company that supplies heating and renewable energy). Appendices include some of the views of stakeholders and grant recipients. (RH)

2008
The Financial Services Experts' Working Group on age discrimination was formed in April 2008 following a Government paper on the Discrimination Law Review's proposals for a Single Equality Bill. The Government invited experts from financial services and age representatives to form a working group to discuss age legislation in financial services and to present evidence. This report by the Working Group discusses and estimates the costs of these options: do nothing; introduce a system to signpost customers to firms who can meet their needs; or make unjustified age discrimination unlawful, given certain assumptions. Annexes include: a map of financial services and who regulates them; an inventory of age related products and services; relevant information relating to the European Employment Directive and legislation passed in Australia, Ireland, New Zealand and the US; and analysis of provision for older people by general and long-term insurance, banking and credit. Changing patterns of family wealth transfers in the UK are explored, using two nationally representative panel studies: the British Household Panel Survey (BHPS), and the English Longitudinal Study of Ageing (ELSA). The research on which this report is based analysed receipt of past and future inheritance transfers and inter-vivo transfers (when the giver is still alive) variously by age, socio-economic group, housing tenure and parental status. A policy report, 'Navigating the age of inheritance' published at the same time, provides accompanying policy analysis and discussion. (RH)

Dual incentives and dual asset building: policy implications of the Hutubi Rural Social Security Loan Programme in China; by Baorong Guo, Jin Huang, Michael Sherraden (et al).
The Hutubi Rural Social Security Loan programme is a policy innovation in a rural area of China, which loans savings in social security accounts back to peasants for them to buy assets for agricultural and other development. In contrast to the nationwide recession in rural social security, this programme has shown its success in proliferating rural social security funds and retaining social security participants. With a focus on the administrative data of the loan programme, this study aims to provide an in-depth understanding of the loan programme and examine how asset building is possible for the poor when institutional incentives are offered. The findings show that when proper policy incentives are provided, poor peasants can build assets. The Hutubi programme may be a good model for other rural areas in China and other developing countries. (KJ/RH)

Effect of financial strain on mortality on community-dwelling older women; by Sarah L Szanton, Jerilyn K Allen, Roland J Thorpe (et al).
It is well established that low socioeconomic status is related to mortality. The authors used the US Women's Health and Aging Studies I and II of community-dwelling older women aged 70 to 79, to examine the extent to which financial strain was associated with increased mortality risk in older women, and whether the relationship differed by race. Cox proportional hazards models were used to estimate the effect of financial strain on 5-year mortality rates. Women who reported financial strain were almost 60% more likely to die within 5 years independent of race, education, absolute income, health insurance status and comorbidities than their counterparts who did not. Although race was not a predictor of mortality, the association between financial strain and mortality was stronger for African Americans than for Caucasians. (RH)

Retrospective data from the first 15 waves of the British Household Panel Survey (BHPS) is used to examine the relationship between their family and work histories of older women and their individual incomes in later life. Women included in the sample were aged 65+ at some time during the period (1991-2005), who had complete work and/or family histories and with non-missing income data, including a breakdown by income source. This study builds on but differs from two previous studies that used the BHPS to investigate income in later life (Bardasi and Jenkins, 2002 and 2004), by finding the association between women's family histories and their incomes later in life to be relatively weak, and in many cases, insignificant. Divorce, early widowhood and re-marriage are not associated with significant differences in older women's incomes, while motherhood is only associated with a small reduction in income in later life - and not at all for certain groups of the population. While there are significant differences in the work histories of older women with different family histories, this does not translate into large differences in their personal incomes, because work history-related income differentials are also relatively small. Even long periods in employment are not associated with significantly higher incomes in later life if these periods of employment were in predominantly part-time or "mixed" employment. The authors' analysis demonstrates how effective public transfers have been in dampening work history-related differentials in older women's incomes, especially for widows and those toward the bottom of the income distribution. The authors suggest that recent pension reforms should eventually produce more equitable outcomes as between men and women, though possibly at the expense of greater inequality among women with different work and family histories. (RH)
Financial inclusion and ethnicity: an agenda for research and policy action; by Omar Khan, Runnymede Trust. London: The Runnymede Trust, 2008, 76 pp (A Runnymede report). Education, employment and housing are identified as the key areas relevant to black and minority ethnic (BME) communities’ experiences of disadvantage that may affect their financial inclusion. Discussion of five aspects of financial provision - banking, credit, insurance, savings and advice - serves to help in distinguishing between poverty-related exclusion and ethnicity-related exclusion. This review also considers whether some financial products and services are compatible with social justice. The author lists 24 points for further research and policy action involving the aforementioned points, together with issues around pensions, risk and assets. International case studies are presented as appendices. (RH)

Giving help in return: family reciprocity by older Singaporeans; by Lois M Verbrugge, Angelique Chan. Ageing and Society, vol 28, part 1, January 2008, pp 5-34. Reciprocity is a powerful principle in social ties. The ethos of family reciprocity is especially strong in Asian societies. The authors study contemporaneous family exchanges, hypothesising that the more current help older Singaporeans receive from family, the more they give in return. Cross-sectional analyses were undertaken of data from two national Singaporean surveys conducted in 1995 and 1999. The help received by older people is measured by income and cash support, payment of household expenses by others, having a companion for away-from-home activities, and having a principal carer. The help given by older people is measured by baby-sitting, doing household chores, giving financial help to children, and advising on family matters. Multivariate models are used to examine the factors that affect an older person’s ability and willingness to give help. The results show that the more financial support Singapore seniors received from kin, the more baby-sitting and chores they provided. In their swiftly modernising society, Singaporean seniors are maintaining family reciprocity by giving time in return for money. The authors discuss how during the coming decades, reciprocity in Southeast and East Asian societies may shift from instrumental to more affective behaviours. (RH)

An inclusive approach to financial products: beyond financial inclusion: involving older people; by Jackie Wells, Age Concern England - ACE. London: Age Concern England, 2008, 60 pp. As part of its ‘Beyond financial inclusion’ policy initiative, Age Concern England (ACE) is seeking to engage with financial services organisations to develop a more inclusive approach to the design, delivery and documentation of their products. This report by independent consultant Jackie Wells sets out policy objectives, and five principles for product and service design which it is believed could resolve some of the exclusion or difficulties faced by older people: adaptability, accessibility, fairness, usable information, and minimising hazards. Implications and benefits for financial services are described. Other individuals and organisations have provided input to the project, which received support from Lloyds TSB and Scottish Widows. Intergenerational bargaining and wealth flows in the era of HIV/AIDS: emerging trends in old Naledi-Gaborone, Botswana; by Thando D Gwebu.: The Haworth Press, 2008, pp 413-432. Journal of Intergenerational Relationships, vol 6, no 4, 2008, pp 413-432. Based on the intergenerational wealth flows conceptual framework, this paper investigates how the AIDS pandemic threatens to disrupt the transfer of resources between generations. A typical low-income urban area in sub-Saharan Africa is used as a case study. The paper explores the everyday living conditions of orphans, their guardians, and the primary home caregivers, with the intention of gaining a deeper insight into their current and future life chances as a result of parental morbidity and mortality due to HIV/AIDS. The research employs a qualitative methodology and relies on documentary information from secondary sources. Short- and long-term recommendations on how to mitigate the negative impacts of HIV/AIDS on wealth transfers among the affected population are suggested based on the study findings. (RH)

Lost in the money maze: how advice agencies and credit unions can help older people cope with today's financial systems; by Help the Aged; Citizens Advice Bureau; ABCUL - Association of British Credit Unions Ltd. London: Help the Aged, 2008, 20 pp.

Help the Aged has produced this toolkit as part of its "Now let's talk money" campaign, which is designed to increase awareness of the products and services available to financially excluded consumers. The campaign aims to encourage people to ask for help when they need it, as well as to inform and encourage advisers to work together to co-ordinate provision and raise awareness of such provision so that the needs of excluded people are met more effectively. This toolkit explores reasons why older people should be among the target groups for the work of advice agencies and credit unions; what barriers exist for older people accessing their services; and how service providers can break down these barriers. (RH)

The Investment Management Association (IMA) builds on existing work on income drawdown approaches, by analysing a number of strategies. There is a particular focus on variable percentage strategies operating according to a predetermined withdrawal role. The analysis firstly examines income streams. In addition to modelling the median outcome for each strategy, the 10th and 60th percentile outcomes are presented, to gauge the state of uncertainty inherent in income drawdown. The pay-out phase and the bequest potential are quantified in Money's Worth terms, to allow for comparison with annuity products and between the drawdown strategies modelled. Sensitivity analysis of the impact of charges and of different asset allocation are also included. The paper does not reach firm conclusions regarding the desirability of one drawdown strategy over another, nor does it suggest that drawdown is inherently superior to annuity products. Rather, it attempts to present a range of possibilities on which to base a wider debate on the future of retirement income. (RH)

The Payments Council was established in 2007, with an objective of leading the future development of co-operative payments services in the UK. Age Concern England (ACE) responds to the Payments Council on a draft National Payments Plan, noting areas of concern including: alternative methods of secure payment for those unable to use PINs; benefits payments; access to current accounts through post offices; action to reduce financial abuse; financial exclusion problems for those with visual or hearing impairment; and tackling the "hidden" costs of fraud prevention. (RH)

This policy report provides accompanying policy analysis and discussion to the National Centre for Social Research (NatCen) report 'The age of inheritance', for both a general and specialist readership. Its primary purpose is to provoke discussion on issues relating to family wealth transfers, which have both positive and negative effects for public policy. On the one hand, such transfers can reduce poverty and encourage responsible behaviour and investment in skills. On the other hand, family wealth transfers can increase material inequality
and inequality of opportunity. The report discusses family wealth transfers in relation to inheritance tax and the property market, and in relation to finance for an ageing population. It suggests a policy framework which recognises that family wealth transfers are not universal, and that an objective of social policy should be for individuals to decumulate as much of their wealth as they should wish. (RH)

From: Download from: www.ilcuk.org.uk  ILC-UK, 22-26 Albert Embankment, London SE1 7TJ.

The authors used data from the US Asset and Health Dynamics Among the Oldest Old (AHEAD) survey to estimate the joint probabilities that an adult child provides time and/or cash transfers to a parent, and to analyse a five-level categorical variable capturing parent-child living arrangements. The estimates suggest significant detrimental effects of parental divorce and step relationship on time transfers and in the probability of co-residence with the index child. Family type, as captured by the composition of the index child's sibling network according to kin relationships to the parent also affected transfers and living arrangement choices of adult children. The findings that transfers from adult children to their separated disabled ageing parents depend on parental marital status and kin relationship suggest that changing family patterns are altering the traditional role of the family as a support network. These findings raise concerns about the care likely to be available to future cohorts of older people who will have experienced substantially higher rates of divorce, remarriage and step parenthood than the cohort considered in this study. (RH)

2007

The consultation referred to concerns the Government's plans to set up a scheme to use unclaimed deposits held in 'dormant accounts' (those where the building society or bank has lost contact with the account holder), while still retaining the individual's right to reclaim money at any time, with interest. Age Concern England (ACE) supports the general principle, but would wish that re-uniting older people with their assets should be a key aim. Moreover, such assets should be used for supporting older people. This summary outlines ACE's key recommendations to the consultation. (RH)
Price: FOC

Age Concern's response to HM Treasury's consultation: Unclaimed assets distribution mechanism: summary; by Age Concern England - ACE. London: Age Concern England - ACE, August 2007, 2 pp (Policy response - ref: 2607(S)).
This consultation concerns the Government's proposals for distributing funds from the unclaimed asset scheme. This scheme will make use of unclaimed deposits held in "dormant accounts", while still retaining the individual's right to reclaim money at any time, with interest. Age Concern England (ACE) favours the Government's proposals to use the Big Lottery Fund (BLF) as the main distribution body. However, as in its response to HM Treasury's previous consultation paper, 'A UK unclaimed asset scheme', ACE makes the point that redistribution of surplus assets should not focus solely on younger people, but rather be expanded to be inclusive of a wider age group incorporating older people. (RH)

Age Concern's response to the Work and Pensions Committee on personal accounts: summary; by Age Concern England - ACE. London: Age Concern England - ACE, October 2007, 3 pp (Policy response - ref: 3507(S)).

Age Concern England (ACE) highlights issues that it sees key to personal accounts being introduced successfully, that it would want the Work and Pensions Committee to consider. ACE particularly believes that the needs of members must be central to the scheme's development, and which takes into account the needs of those with low and interrupted earnings, for example by allowing modest lump sums to be added. Other concerns covered are: appropriateness of information and advice; annuities; ensuring that saving pays; and monitoring and reviewing pension reform. Some clarity is also sought regarding how the Personal Accounts Delivery Authority (PADA) will operate. (RH)

Price: FOC

This response from Age Concern England (ACE) to the Work and Pensions Committee on the pensions White Paper "Personal accounts: a new way to save" refers to findings from a survey of women and pensions carried out by ACE between August and October 2006. ACE comments on the following aspects: automatic enrolment; the personal accounts model; governance; information and advice; accessing pension savings; waiting periods; savings options before 2012; and existing pension provision. (RH)

Aspirations in older age; by Melanie Henwood.

The author reviews two research reports into older people's needs and the relationship between affluence and health, both published by the Joseph Rowntree Foundation (JRF) in 2007. "Measuring resources in later life: a review of the data" by Sue Middleton et al involved a research team from the University of Loughborough's Centre for Research in Social Policy and the University of Essex. In contrast to other studies, this report found that age in itself is not a strong predictor of hardship. The second study is "Understanding resources in later life: views and experiences of older people" by Kathryn Hill and colleagues, also at the Centre for Research in Social Policy. This qualitative research examined the importance of looking at a range of resources in older people's lives. The author of this article highlights the key attributes of the research being reviewed. (RH)

ISSN: 03075508

As policy makers have sought to reconfigure the public-private boundaries of their pension systems, trust has become an increasingly salient issue. At stake is the attainment of desired policy outcomes regarding retirement. By what criteria, then, should the capacity of pension institutions to build and sustain trust be assessed? This article emphasises the strategic importance of institutional design in the trust process. Building on Sztompka's seminal analysis of the institutional foundations of trust and a substantial review of the literature and survey evidence regarding public confidence in pensions, the authors identify, justify and give indicative operational content to six trust benchmarks. These benchmarks are choice, accountability, transparency, security, enactment of rights, and enforcement of rights. This provides a conceptual foundation for future empirical research on the capacity of pension institutions to build and sustain trust. (KJ/RH) ISSN: 00472794 From: http://www.journals.cambridge.org

'Asset accumulation across the life course' explores changing patterns of asset holding among different age cohorts in the UK. It uses British Household Panel Survey (BHPS) data from 1995, 2000, 2004 and 2005, which included detailed questions about household finances. During this time, net household incomes increased for all age groups over and above inflation. Overall, households were less likely to be contributing to a private pension in 2005 than in 1995. As well as comparing incomes, savings and pensions over the 10-year period, this report also looks at trends in liquid assets and debts, illiquid assets and (property) debts, and inequality. A policy report, 'Asset accumulation in focus: the challenges ahead' was published simultaneously by ILC UK to provide accompanying policy analysis and discussion. (RH) From: International Longevity Centre UK, 22-26 Albert Embankment, London SE1 7TJ. Website: www.ilcuk.org.uk

This policy report is based on, and responds to, research published simultaneously by ILC UK entitled 'Asset accumulation across the life course' by Richard Boreham and James Lloyd. The purpose of this report is to provide accompanying policy analysis and discussion to the 'Asset accumulation across the life course' research, for both a general and specialist readership. Its primary purpose is to provoke discussion. Among the themes covered in relation to - and affecting - asset accumulation are: living with debt; family formation; means-testing among older people; wealth transfers and intergenerational solidarity; funding long-term care; and decumulation and the life course. (RH) From: International Longevity Centre UK, 22-26 Albert Embankment, London SE1 7TJ. Website: www.ilcuk.org.uk

1950 adults aged 18-69 took part in this 2006 study, which explored attitudes, knowledge and behaviour relating to pensions, saving and financial planning for retirement. The survey has been designed with the possibility of being repeated every two years in order to measure continuity and change in public attitudes. The report describes respondents' social and economic characteristics; and considers people's willingness and ability to draw on pensions, savings and assets to help fund their retirement. Respondents' knowledge of different aspects of the pension system are described, also their awareness of pension issues, and the level of knowledge of their own pension arrangements. The ways in which people can become better informed about pensions and planning for retirement are examined. General attitudes towards saving for retirement, including attitudes to risk and views about making important financial decision are analysed. Later chapters include: closer examination of attitudes to pensions and saving, and people's trust and confidence in pension providers; views on the Government's role and pension reform, particularly on the State Pension; expectations for retirement; and the
treatment of pensions in the tax system and changes in April 2006 (also known as 'A' day). Appendices include results of statistical analyses. (RH) From: Corporate Document Services, 7 Eastgate, Leeds LS2 7EY. E-mail: orderline@cds.co.uk Website: www.cds.co.uk Download from DWP website: http://www.dwp.gov.uk/asd/asd5/rrs-index.asp

Credit where it's due: [implications of direct payments for disabled people to open and use a bank account]; by Mark Hunter. Community Care, no 1660, 15 February 2007, pp 24-25. The system of direct payments has highlighted how difficult it is for disabled people to open and use a bank account. Pressure from users has led to some banks offering new facilities for visually impaired people, wheelchair users, those with hearing impairments and other disabilities. This article looks at these developments in banking services, also a recent report from Leonard Cheshire highlighting the problems with using chip and PIN for card payments. Easy come, easy go: borrowing over the life-cycle; by Andrea Finney, Sharon Collard, Elaine Kempson, Personal Finance Research Centre (PFRC), University of Bristol. Edinburgh: Standard Life, 2007, 68 pp. This research project was undertaken to better understand why people borrow and how borrowing may be mitigated or even avoided among three life stage groups: young adults, people in the family years, and people in post-family years (50s to early 70s). The research involved primary analysis of eight focus groups at these different stages, supported by the literature, secondary analysis of national survey data, and a workshop with experts in the field. In contrast to the pressures to consume of the two younger age groups, the report found that those in the post-family years had generally cautious attitudes to borrowing. The research concludes that policy responses need to focus on the positive advice throughout life of "making money work for you". (RH) From: Link to the research: https://www.bristol.ac.uk/geography/research/pfrc/themes/credit-debt/easy-come.html

The great generational robbery; by Faisal Islam. New Statesman, 5 March 2007, pp 34-36. Expensive pensions, no hope of getting on the housing ladder, and tens of thousand pounds of debt just to go to university. Have the under 35s been mugged by the baby-boom generation that went before them? The economics correspondent of Channel 4 News comments that while high house prices are transferring wealth to the old and rich from the young and poor, there is a demographic problem. There may be a perception that the increasing proportion of over 65s in the UK population may be living in reasonable comfort, but 17% of pensioners are classified as living in poverty. (RH) ISSN: 13647431

Live now, save later?: young people, saving and pensions: a report of research carried out by the MORI Research Institute on behalf of the Department for Work and Pensions; by Nick Pettigrew, Jayne Taylor, Caroline Simpson (et al), Ipsos MORI Social Research Institute; Department for Work and Pensions - DWP. Leeds: Corporate Document Services, 2007, 101 pp (Department for Work and Pensions Research report, no 438). Young people face a variety of barriers to saving for retirement, from the strong sense of wanting to "live for today", to the competing demands on their income and poor understanding of the available pension options. The Department for Work and Pensions (DWP) commissioned Ipsos MORI's Social Research Institute to undertake a qualitative research project examining the attitudes of young people (aged 16 to 29) to saving, retirement planning and pensions. The research sought to inform ways of encouraging and enabling young people to begin saving, particularly for retirement. This report documents the findings, the main topics being: money management strategies and financial priorities; attitudes to saving; triggers and barriers to saving; perceptions of retirement and pensions; triggers and barriers to saving in a pension; and reactions to personal accounts and...
automatic enrolment into a pension scheme being introduced in 2012. Appendices comprise the methodology and materials used in the discussion sessions. (RH)

Managing the financial assets of older people: balancing independence and protection; by Cheryl Tilse, Deborah Setterlund, Jill Wilson (et al).

Family involvement in managing older people's financial assets is an important area in policy and practice. This importance relates to the complexity of older people's assets, systems for paying for care, and concerns around substitute decision-making and financial abuse. Although a common task of informal care, little is known about older people's experiences and wishes in relation to asset management. This paper reports on a qualitative study of the experiences and perspectives of 34 older Australians receiving such assistance. It identifies three scenarios that promote or inhibit dependence in this context, and draws out the challenges for this emerging area of practice with older people and their families. (RH)

Findings, 2061, April 2007, 4 pp.

With increasing numbers of older people living longer, the future of their financial and service provision is a key policy concern, while poverty among the present generation of older people remains an important issue. This qualitative study, by the University of Loughborough's Centre for Research in Social Policy, explores how older people value available resources, and how they had planned for retirement and are planning for future later life. The research is set against the background of the 2006 White Paper, "Security in retirement: towards a new pension system" (Cm 6841). 91 in-depth interviews were conducted with older people aged 65-84 during 2005. Although this a longitudinal piece of research (respondents will be interviewed up to twice more), these findings relate to the first round of interviews only. The focus is on experiences up to the time of interview and expectations about the future, in order to act as a foundation for issues to be explored in more depth in the next research stages. The full report, by Katherine Hill and colleagues, "Understanding resources in later life: the views and experiences of older people" is published by the Joseph Rowntree Foundation (JRF). (RH)

Parental practices and willingness to ask for children's help later in life; by Carmi Schooler, Andrew J Revell, Leslie J Caplan.

The authors examine how parents' relationships with their 13 to 25 year old offspring affect parents' willingness to ask them for help with financial and personal problems 20 years later. Husbands and wives were interviewed in 1974 and 1994; a child was interviewed in 1974. Two aspects of parental style - responsiveness and restrictive dominance - were used to predict parents' willingness to request help from a child 20 years later. Structural equation modelling analyses revealed the following: mothers' willingness to ask an adult child for help with a personal problem was increased to higher levels of responsiveness; mothers' willingness to ask for financial help was increased by responsiveness and decreased by restrictive-dominant maternal behaviour; and neither responsive nor restrictive dominant paternal behaviour affected fathers' later willingness to ask an adult child for help of either kind. Personal identification (PIN) numbers: a new cause of financial exclusion in older people; by Elizabeth L Sampson, Deborah Dover, Marc Mandell (et al).

Since April 2003, the UK government has been phasing out paper pension books. The state pension is now transferred directly into a bank account and cash obtained using a bank card, keypad and a 4-digit personal identification number (PIN). While this system is more secure, people with dementia or early memory problems are likely to have difficulty in remembering a PIN. This short article reports a cross-sectional study with 35 consecutive attendees at a day hospital and a community centre in Hampstead, London. All were aged 65+ with
no acute medical or psychiatric illness. They completed the Mini-Mental State Examination (MMSE), and were asked to identify a bank debit card, supermarket loyalty card, a PIN keypad and a pension book. They then generated a 4-digit PIN of their choice; immediate recall of this was checked, and again 2–4 hours later. Correct recall was hypothesised to correlate with an MMSE score of 25 or more. Two-thirds (64%) were able to enter their PIN correctly; but a score of less than 26 was significantly associated with inability to use a keypad. This result suggests that a significant number of older people will have difficulty in using a keypad and 'chip and PIN' systems. The 'hidden disability' of cognitive impairment may exacerbate financial exclusion. (RH)

A problem of riches: towards a new social policy research agenda on the distribution of economic resources; by Michael Orton, Karen Rowlingson. Journal of Social Policy, vol 36, part 1. January 2007, pp 59-78. The distribution of economic resources in society is a central concern for social policy, but research in this area has primarily concentrated on the bottom of the economic distribution, namely "the poor". In this article, the authors argue that it is time for social policy to move away from a narrow focus on poverty to consider the broader issues of inequality between different groups in the economic distribution, and, by implication, the position of better-off citizens. This raises a number of conceptual challenges, due to the current lack of consideration of wealth and inequality at a political, theoretical or empirical level. This article discusses the challenges, and concludes by outlining a possible research agenda. However, the underpinning argument is that social policy needs to develop a broader understanding of the economic distribution. (RH)

Safe as houses?: what drives investment in social care?; by Commission for Social Care Inspection - CSCI. London: Commission for Social Care Inspection, September 2007, 32 pp (CSCI 209). Private equity firms and banks invest in social care organisations. This report focuses on how bankers and others view investment in social care, and raises some of the implications for the future development of personalised care. The focus is on investment decisions in social care services for older people, but there are care implications for all care services for adults. Included are the key issues discussed at two seminars in December 2006 and March 2007, one attended by corporate providers, analysts, investors and national policy makers, the other with members of a regional care association. The seminars explored what encouraged investors to put their money into social care services. The report includes comments from the seminars on the present and future extent to which investors might contribute to social care provision - which is cautiously. (RH)

Understanding resources in later life: the views and experiences of older people; by Katherine Hill, Karen Kellard, Sue Middleton (et al), Centre for Research in Social Policy, Loughborough University; Joseph Rowntree Foundation - JRF. York: Joseph Rowntree Foundation, 2007, 94 pp. With increasing numbers of older people living longer, the future of their financial and service provision is a key policy concern, while poverty among the present generation of older people remains an important issue. Increasing life expectancy means that resources in later life have to be planned and managed over longer periods. In this project, resources include health, social contacts, community and neighbourhood resources, housing and transport, as well as money. The research explores access to these resources, their importance in older people's lives, and how they interact. Different types of planning for retirement and the factors that influence plans and outcomes are described. People's thoughts about, and plans for, the future are also explored. Finally, the implications of the findings for government policy and for future research are reflected on. The research used a qualitative longitudinal approach was used, and a panel of 91 respondents aged 65 to 84 were interviewed to investigate the consequences of changes in circumstances in later life. This report is based on the first wave of interviews. The research is set against the background of the 2006 White Paper, "Security in retirement: towards a new pension system" (Cm 6841). A summary of this report, 'Older people's views and experiences of resources in later life' (Findings, 2061; April 2007) is published by the Joseph Rowntree Foundation (JRF). (RH)

As part of the contribution by Age Concern England (ACE) to the debate following the Pensions Commission report (November 2005) and leading up to the White Paper, "Security in retirement: towards a new pensions system" (Cm 6841; May 2006), some 30 local Age Concerns ran "listening events". This Policy response outlines the main points and recommendations, chief of which are: restoring the basic state pension earnings link; reform to the contributory system; a new scheme of personal accounts to encourage savings; and a gradual increase in the state pension age (SPA). (RH)

Price: FOC

Helping older people manage their financial assets is a common experience for relatives and friends. Policy and practice have concentrated on protecting vulnerable adults and developing formal arrangements for people who are unable to make their own decisions. Recognition of the role of relatives and friends in managing older people's assets is limited. This exploratory review draws attention to the growing importance and complexity of asset management, and the information needs of older people and their carers. One of the seven key findings details that the extent of deliberate financial abuse is unclear; doubtful practices may reflect carers' ignorance or misunderstanding of the complexities of managing someone else's finances. The review has also identified gaps in knowledge and questions for further research. The research was funded by the Actuarial Profession and conducted in early 2006. The authors' full report, published as 'Minding the money: carers and the management of financial assets in later life', is available on the Social Policy Research Unit (SPRU) website. (KJ/RH)

In this context, "personal accounts" relates to the idea of a National Pensions Savings Scheme (NPSS), a recommendation of the Pensions Commission. This qualitative study is based on in-depth interviews with 75 business employers and 8 non-business employers representing firms varying in size from 1-4 to 1,000+ employees. Their views and concerns were sought on proposals for automatically enrolling people into personal accounts. The report is organised as follows: employers' attitudes towards pension provision; views on automatic enrolment and on the level of contributions; employers' likely responses to a 3% minimum employer contribution; employers' views on employee reactions to personal accounts; the process of introducing personal accounts; employers' views on different operating models of personal accounts; and views of non-business employers. Views on the "personal accounts" idea varied by size of employer, and on whether those with contributions of 3% or more were willing to "level down" their existing schemes. This study was commissioned as part of a programme of research and analysis carried out by the Department for Work and Pensions (DWP) to gather evidence to inform the Government's proposals on personal accounts, as set out in the White Paper, "Security in retirement: towards a new pensions system" (Cm 6841; TSO, 2006). (RH)

In this context, "personal accounts" relates to the idea of a National Pensions Savings Scheme (NPSS), a recommendation of the Pensions Commission. This quantitative survey is based on telephone interviews with 2516 private sector employers in Great Britain, and was designed to be representative of all such employers with one or more employees. The sample was drawn from the Inter-Departmental Business Register (IDBR) which is a comprehensive list of employers compiled from value added tax (VAT) and income tax returns. The report is organised as follows: overview of pension provision; attitudes to pension provision and awareness of the pensions debate; employer attitudes towards automatic enrolment; employers' views on eligibility criteria and periodic re-enrolment of those who opt out; employers' attitudes towards contribution levels; comments on employers' spontaneous or most likely responses; impacts of existing pension provision; administrative impacts; employer attitudes toward different ways of phasing in the proposal; and employer vies on employee reactions. This study was commissioned as part of a programme of research and analysis carried out by the Department for Work and Pensions (DWP) to gather evidence to inform the Government's proposals on personal accounts, as set out in the White Paper, "Security in retirement: towards a new pensions system" (Cm 6841; TSO, 2006). Powerpoint presentation made on behalf of the University of Queensland Ageing and Assets Research Program. Building practice in relation to asset management (AM) and financial abuse in aged care facilities was one of the Research Program's projects 2005-08. The presentation defines financial abuse. It notes the range of tasks typically undertaken by family members on managing an older person's financial assets; the extent to which AM wishes were met in a study of scenarios for 34 older Australians; and issues for particular groups - indigenous people, and culturally and linguistically diverse communities (CALD) in rural and remote areas. (RH)

From: Dr Cheryl Tilse, School of Social Work & Human Services, Chamberlain Building, Campbell Road, The University of Queensland, St Lucia, 4072, Australia. C.Tilse@social.uq.edu.au

A significant and probably increasing proportion of older people are "asset rich, income poor". This raises a number of social policy issues around poverty and living standards in later life. For example, perhaps older people are "living poor to die rich", because they wish to pass on their assets to future generations or because they feel they have an "inalienable right" to their property. Or perhaps they would like to use up their assets but find that difficult, for example, because of concerns around equity release products. This article focuses on attitudes to assets and inheritance, drawing on findings from in-depth interviews and focus groups. The data suggest that people generally take a balanced and pragmatic attitude to their resources. They do not wish to "live poor to die rich", but nor are they keen to spend their resources recklessly as they wish to leave something to their families, while also maintaining a reasonable standard of living in later life. It concludes by suggesting that the current "asset-based welfare" debate should broaden its focus on asset accumulation to consider issues around asset use. (RH)

The Post Office Card Account (POCA) was launched only in April 2003 as an alternative for those who could not or did not want to open a bank account when direct payments of benefits were introduced. Of the 4.3 million people receiving benefits via a POCA, about 40% are older people. The Government's decision not to renew the POCA contract in 2010 has led to many complaints from older people whose ability to access their pensions and
other financial services would be severely curtailed. This report presents the findings of a survey by Help the Aged of 843 older people, to better understand their views on the POCA, what they may want from a replacement, and what other support may be needed. Post offices are seen as convenient, trustworthy and reliable places for financial transactions and advice; and there are concerns about the negative impact on the post office network of withdrawal of the POCA. Consequently, the alternative product required by many respondents would need to offer similar facilities to those already provided by the POCA. (RH)

Means testing and the heterogeneity of housing assets: funding long-term care in Spain; by Joan Costa-Font, Oscar Mascarrilla-Miro, David Elvira.
The access to publicly funded long-term care (LTC) in Spain has been traditionally rationed through the use of means tests based on individuals' current income and needs. However, individuals' wealth - primarily housing assets - is progressively taken into account. In parallel, the responsibilities for the organisation of LTC services have been devolved to region states - autonomous communities (ACs) - giving rise to some regional heterogeneity, though limited credence has been reported as the underlying determinants. This paper examines the current role of housing assets in determining public and private funding for LTC in Spain. Secondly, the authors present a qualitative and quantitative examination of the regional heterogeneity in the processes of public funding criteria determining eligibility to public support for LTC. Finally, they report survey evidence on the individual's willingness to sell (WTS) their housing assets in order to either totally or partially finance access to LTC. Their findings suggest that housing assets are the main source of wealth accumulation at old age. If there is significant regional heterogeneity in the access to LTC resulting from regional differences in the means testing criteria. Progressively, all ACs are considering housing assets in the means testing criteria. Interestingly, individuals' willingness to sell their housing assets declines with age and is more common among less skilled and widowed individuals. (RH)

NPSS policy and design choices: a discussion paper; by Alison O'Connell, Pensions Policy Institute - PPI.
The Government is consulting on whether to introduce something like the National Pension Savings Scheme (NPSS) proposed by the Pensions Commission in November 2005. While the Pensions Commission left some design details to be considered, the proposal was a fairly detailed blueprint of a very low cost national auto-enrolment pension scheme to be run by a partnership of state and private industry. This PPI paper considers other proposed or existing savings vehicles similar to NPSS, such New Zealand's KiwiSaver. Secondly, it compares the policy background and aims of the NPSS and KiwiSaver. Thirdly, it considers the implications of the policy choice made for the NPSS and asks whether an alternative policy that learns lessons from KiwiSaver could be more effective. Lastly, it considers some product design and implementation choices for NPSS. The appendix is a detailed tabulated comparison of NPSS and KiwiSaver. (RH)

Public attitudes to personal accounts: report of a qualitative study: a report of research carried out by Ipsos MORI Social Research Institute on behalf of the Department for Work and Pensions; by Suzanne Hall, Nick Pettigrew, Paul Harvey, Ipsos MORI Social Research Institute; Department for Work and Pensions - DWP.
In this context, "personal accounts" relates to the idea of a National Pensions Savings Scheme (NPSS), a recommendation of the Pensions Commission. This qualitative study is based on 22 group discussions and in-depth interviews with 20 group participants not currently saving in a private pension. Their views and concerns were sought on proposals for automatic enrolment into personal accounts. The report is organised into six main sections: the pensions context and attitudes to retirement; overall attitudes to personal accounts; features of personal accounts such as contribution rates, liquidity, portability, choice of provider, fund choices and a guarantee; the management and administration of personal accounts; the documentation phase; and communication issues. This study was commissioned as part of a programme of research and analysis carried
out by the Department for Work and Pensions (DWP) to gather evidence to inform the Government's proposals on personal accounts, as set out in the White Paper, "Security in retirement: towards a new pensions system" (Cm 6841; TSO, 2006). (RH)

The National Pensions Savings Scheme (NPSS) was a recommendation of the Pensions Commission. This report presents key findings of a review of academic and other published research on whether NPIS would add to total household savings. The review is intended to assist the government in assessing NPSS and other options for delivering personal accounts and reforming private pensions. The review is in two main parts. The first summarises a wide range of research of potential relevance to the assessment of the net impact of the proposed NPSS on household savings. This encompasses macroeconomic studies of the impact of changes on pension savings on total savings, and microeconomic studies looking at the impact of tax incentives and matching contributions on voluntary savings, the impact on total savings of changes in mandatory or quasi-mandatory funded savings schemes, and the impact of automatic enrolment. The second part discusses the implications of the research for the assessment of the impact of the NPSS on total household savings. (RH)

This White Paper sets the direction for the long-term future of pensions and retirement savings. Its publication follows a National Pensions Debate (February 2005-March 2006) and reports by the Pensions Commission (chaired by Adair Turner). The reforms aim to meet five key tests that strike a balance between the responsibilities of the state, the individual and the employer: personal responsibility, fairness, simplicity, affordability and sustainability. An executive summary outlines progress to date and the reasons why reform is needed. Chapters 1-4 discuss the main themes: encouraging and enabling private pension saving (for example, through personal accounts); strengthening existing provision; providing a foundation for private saving; and extending working life in an ageing society. Annexes provide evidence on: measuring undersaving for retirement; improving fairness in the state pension system; the extent and impact of demographic and societal change; and outcomes under the reformed system. They also include a glossary and list of DWP commissioned research. Comments are sought by 11 September 2006, and Chapter 5 outlines the consultation arrangements. (RH)

Findings from a qualitative research study are presented, exploring how self-employed people aged 40+ make financial plans for retirement, and whether self-employment can play a role in extending people's working lives. Findings are based on interviews with 40 people in two areas of England in late 2005 and early 2006. The project was undertaken by the Social Policy Research Unit (SPRU), University of York on behalf of the Department for Work and Pensions (DWP). The research was undertaken against a background of growing policy interest in pension provision, particularly the work of the Pensions Commission. The report explores the routes by which people come to self-employment, and the advantages and constraints. Considered next are knowledge of financial products that might contribute to income after retirement, patterns of saving within the study group, and views and perceptions about savings and pension products. Thinking about and moving from

This summary outlines findings from a study aimed at increasing our understanding of how self-employed people plan financially for retirement, how they make decisions about saving and retirement, and about how self-employment can play a role in extending people's working lives. The study also sought to shed light on how self-employment differs from employment in the barriers and incentives the self-employed face in saving for retirement. Semi-structured qualitative interviews were conducted with 40 self-employed people aged 40+ (19 men and 21 women, with annual earnings up to £30000), including some who had reached State Pension Age (SPA). The report's key findings are outlined on: working as self-employed; financial products and information; thinking about and moving from self-employment to retirement; and policy implications. (RH)

Although good progress has been made, low income and financially excluded consumers continue to experience barriers to banking. This research summary points to fear of fraud, fear of debt, and the need for short-term saving as perceived barriers to access to banking services for those on low incomes. It notes that both supply and demand side problems are resulting in many people failing to open a bank account, while others are not using their bank account's features to realise the benefits of financial inclusion. People with low incomes and limited knowledge of the banking industry need explanations, certainty, control, flexibility and visibility. The banking industry's lack of experience in dealing with this group of consumers has resulted in a mismatch between customers' money management needs and the basic bank accounts on offer. The National Consumer Council (NCC) wants every basic bank account to be hassle-free to open, and to offer a standard set of features and innovative additional features to meet consumers' needs. (RH)

Understanding older people's experiences of poverty and material deprivation: a report of research carried out by the Personal Finance Research Centre, University of Bristol on behalf of the Department for Work and Pensions; by Nicola Dominy, Elaine Kempson, Personal Finance Research Centre (PFRC), University of Bristol; Department for Work and Pensions - DWP. Leeds: Corporate Document Services, 2006, 87 pp (Department for Work and Pensions Research report, no 363).

Previous research indicates that a number of factors affect older people's perceptions of material deprivation. The Personal Finance Research Centre at the University of Bristol undertook this research, to provide an understanding of older people's experiences of poverty and their understanding of a range of indicators used to measure material deprivation. The research is based on six focus groups and 42 in-depth interviews with people aged 60-89. The findings explore, first, the preparations made for retirement, current standard of living, and expectations and aspirations of retirement. Next, attitudes to spending and saving are looked at, also actual patterns of spending and saving. Aspects of ageing and health, help and support received, and the impact of standard of living are explored. Finally, an overview is provided on how the 11 adult-level indicators included in the Family Resources Survey (FRS) were interpreted by older people. Readers are also recommended to consult another DWP report published in 2006 - "Are 'poor' pensioners 'deprived'?” - as this focuses on secondary analysis of material deprivation data. (RH)

Pensioners living in households headed by someone from a minority ethnic group are more likely to live on a low income and may face significant barriers to accessing benefits. This qualitative research study was designed to examine the different factors that affect the work, saving and retirement decisions of ethnic minority groups. The aim of the research was to fill acknowledged gaps in existing research to ensure that policies are appropriate and sensitive to any cultural differences. The findings are based on 60 semi-structured interviews in autumn 2005 with people from the six main ethnic minority groups in the UK (Indian, Pakistani, black Caribbean, black African, Bangladeshi and Chinese) and included both those above and below state pension age (SPA). The report describes the research aims and methodology; the topic guide used and a listing of sample participants attributes are included as appendices. The report presents findings on: work and education trajectories; household finances; planning for and financing retirement; and factors influencing retirement planning. (RH)

2005

Advice on pensions and saving for retirement: qualitative research with financial intermediaries: a report of research carried out by the Personal Finance Research Centre, University of Bristol on behalf of the Department for Work and Pensions; by Elaine Kempson, Sharon Collard, Personal Finance Research Centre (PFRC), University of Bristol; Department for Work and Pensions - DWP. Leeds: Corporate Document Services, 2005, 66 pp (Department for Work and Pensions Research report, no 289).

The Department for Work and Pensions (DWP) commissioned this research on the role played by financial intermediaries - such as independent financial advisers (IFAs) and advisers employed by banks, building societies and insurance companies - in the provision of advice about saving for retirement. Based on in-depth interviews with a range of financial intermediaries, the research sought to increase understanding about how income-related benefits affect that advice. The report provides an overview of the marketplace for advice on retirement planning and pensions (including recent significant changes and the authorisation and training of advisers). The report looks in detail at the nature of one-to-one advice given by local financial intermediaries, the extent to which they focus on retirement planning and pensions, and how they respond to scenarios involving people on low incomes with low levels of pension provision. Other chapters cover financial intermediaries' advice on State provision for retirement, and workplace-based advice on saving for retirement. (RH)

The growth of home ownership in the UK has probably increased the number of people who will both bequeath and inherit assets. The authors therefore wanted to discover how much support there is for the concept of inheritance and how this varies within the population. Their report considers expectations of receiving an inheritance, and whether or not they feel they need to inherit assets (referred to as "perceived needs"). The study also focuses on the experience of receiving an inheritance; attitudes to, and ability to leave, bequests; and attitudes to assets. A short chapter on people's knowledge of inheritance law and tax, and whether or not they had made a will outlines findings from previous research. The present study was commissioned by the Joseph Rowntree Foundation (JRF) and carried out at the Universities of Bath and Bristol. The study's main component was a nationally representative survey of 2,000 people living in Britain. Focus groups of owner-occupiers in different age bands were also carried out. (RH)
With more families owning their own homes, more people will both bequeath and inherit assets. A key issue that this raises for social policy is whether people maintain their assets to leave as bequests (potentially raising the living stands of their children) or use them in later life to improve their own living standards. A survey of 2000 people by the authors of the full report, Karen Rowlingson and Stephen McKay, produced the first nationally representative study of attitudes to inheritance in Britain. (KJ/RH)

Achieving financial inclusion is essential to tackling social exclusion and poverty. Having a bank account can be a gateway to other products and services, such as affordable credit and insurance, as well as a means to avoiding the extra costs of pre-payment meters and pay-as-you-go tariffs. However, the current model of basic bank accounts, introduced by the government in 2000, and intended to enable all low-income consumers to access banking services, is not delivering. This factsheet presents new research findings to stimulate ideas on solutions to financial inclusion. (RH)

Bridging the savings gap: an evaluation of voluntary and compulsory approaches to pension reform: a research report by PricewaterhouseCoopers for the ABI; by Association of British Insurers (ABI); PricewaterhouseCoopers.; Association of British Insurers (ABI), June 2005, 72 pp.
The Association of British Insurers (ABI) commissioned PricewaterhouseCoopers to evaluate the impact on savings behaviour and the public finances of six possible long-term pension reform options. Option 1 covers a range of reforms to the state pension system involving increasing the Basic State Pension to £120 per week. Option 2 suggests a single (30%) rate of tax relief on pension contributions. Option 3 would introduce matching government contributions at a 50% rate for private pension contributions in place of existing tax relief. Option 4 is "compulsion" with minimum pension contributions of 3% each for employees and employers. Option 5, "auto-enrolment" into company schemes for all employees, assumes that all employers offer a pension scheme and make a 3% contribution if employees did the same. Option 6, the Pension Contribution Tax Credit (PCTC), gives an additional national insurance (NI) rebate to employees who contribute at least 5% (3% for small firms) to pension schemes that cover at least two-thirds of their workforce. (RH)

Bridging the savings gap: an evaluation of voluntary and compulsory approaches to pension reform: [executive summary]; by Association of British Insurers (ABI).: Association of British Insurers (ABI), June 2005, 8 pp.
This document accompanies a research report prepared for the Association of British Insurers (ABI) by PricewaterhouseCoopers (PWC), which sets out the results of modelling six scenarios for UK pensions reform. This ABI paper draws out the main lessons for policymakers. It concludes that there is no 'magic bullet' which on its own would significantly increase savings levels for those who need to save more and can afford to do so. (RH)

There is a dearth of experimental research in the UK on consumer understanding of financial risk; and the existing literature suggests that people cannot learn rational preferences, particularly with regard to financial decisions. This report outlines key findings from the relevant experimental research, and a subsequent pilot study (comprising five experiments) on aspects of decision-making in long-term retirement saving and investment risk. Findings of the main research project's two studies are also outlined: the first investigated the degree to which context affects financial decision-making, while the second investigated consumers’
Do intergenerational transfers from elderly parents increase social inequality among their middle-aged children?: evidence from the German Aging Study; by Harald Kunemund, Andreas Motel-Klingebiel, Martin Kohli. Journals of Gerontology: Series B, Psychological Sciences and Social Sciences, vol 60B, no 1, January 2005, pp S30-S36.

Analyses are based on the first wave of the German Ageing Survey in 1996, for respondents aged 40-54. Transfers from parents or parents-in-law during the previous 12 months - many of them smaller ones - are not significantly related to children's incomes. Separated and divorced children have significantly higher probabilities of receiving such transfers, indicating a need-directed family transfer process. Larger transfers before the previous 12 months are need-directed as well, and moreover positively related to income position. Bequests, finally, are positively related to income position, while having no need component at the time of observation. Whereas large monetary transfers and bequests may increase social inequality in the children's generation, a substantial part of the regular monetary flow from ageing parents to their adult children before situations of need. Public policy should take into account these different effects. Reducing the general level of public pensions would weaken regular transfer giving, and thus lead to more inequality in the children's generation. Higher taxation of very large transfers and bequests would have the opposite effect. (RH)

The Royal Commission for Long-term Care of the Elderly considered removing the domestic home from all assessment of capital in matters of older people paying for their long-term care. In responding to the Royal Commission's recommendations, the Scottish Executive acknowledged that "one of the great worries facing older people is that of selling their home to pay for care". John Swinburne MSP intends to introduce a Bill in the Scottish Parliament to abolish inclusion of a person's home in the financial assessment to pay for long-term care, and seeks views (by 12 January 2006) as part of the consultation process. Arthur Midwinter of the Institute of Public Accounting Research, University of Edinburgh was commissioned to provide an analysis of the financial implications and to outline how residential care for older people in Scotland is currently funded. Perceived obligations of remarried households to provide financial assistance to younger family members; by Timothy S Killian, Jana Ferrell.
The purpose of this study was to examine perceived obligations of step-parents to provide financial assistance to adult stepchildren. Building on previous research, this study examined both contextual and ideological variables that may be related to perceptions of normative obligations. College student participants (n=218) perceived higher levels of obligations to adult stepchildren whose financial need was not their fault, as compared to adult stepchildren who were perceived as responsible for having financial needs. Also, perceptions of obligations were negatively related to ideologies consistent with traditional beliefs about marriage and with familism. This study highlights the need for more research and the need for policymakers to attend to how diversity in family structures is likely related to differences in intergenerational transfers. (KJ/RH)

Retirement resources: the role of housing assets and bequests; by Karen Rowlingson, Stephen McKay.
There is currently a major debate about the future of pension provision in Britain. Much of that debate concerns levels and sources of income. But there is also growing interest in the role that assets and bequests might play in raising people's living standards in later life. Based on a major new survey of attitudes to inheritance and assets, this article argues that assets will not fill the pension gap for those on lowest incomes as these groups are at least likely to have assets; and among those that do, there is more support for the concept of preserving assets by inheritance than among other more affluent groups. Bequests will also fail to help those most in need of a windfall, as receipt of inheritances currently benefits the most affluent groups. However, among those with assets, there does seem to be more interest in liquidating assets - including housing assets - than previous research has suggested. Some people, therefore, are prepared to liquidate their assets in later life to supplement their income. (RH)

Serious about saving: the ABI agenda for action on state and private pension reform; by Association of British Insurers (ABI).: Electronic format, June 2005, 16 pp.
The Association of British Insurers (ABI) has identified the problem that Britain was not saving enough for retirement, and has researched almost every aspect of the problem in the last three years. The ABI calls for improvements in the state pension to help those on lower income, and new incentives to encourage higher levels of savings by the better off. This document sets out the ABI's overall pension strategy, an agenda for change that covers the following five points: reforming state pensions; harnessing the power of the workplace; raising levels of awareness and understanding about pensions; encouraging people to work longer; and a pensions industry fit for purpose. Asset accumulation and lifestage - an analysis of the wealth of households as they approach and pass the retirement age: a report from the International Longevity Centre UK produced by Future Foundation Projects; by International Longevity Centre UK - ILCUK.: Electronic format, 2004, 25 pp.
Patterns of asset accumulation leading up to and through retirement by UK residents are explored using the British Household Panel Survey (BHPS). Not only does the BHPS provide detailed data on savings, investments and housing equity, it also gathers data on personal debt and money owed through secured lending. Thus, it is possible in this report to assess positive assets against liabilities. However, pension assets are not included. (RH)

This qualitative study examines the “final gift exchange” process by which older people give cherished possessions in return for lasting appreciation. The authors interviewed 54 middle and upper middle class people aged 50-90 (39 women) who had to dispose of personal objects when moving to smaller residences. Goffman's spiraling strategy was used to analyse people's reports of disposing of personal possessions. Three significant dimensions process were identified: family, economy and self; and a heuristic was created describing eight ideal-type gift exchange scenarios by categorising objects valued or not by family, economy or the gift giver's material self. By applying the heuristic, a lack of shared definitions of the meaning and value of objects was observed, created dilemmas in disposing of personal objects, particularly those connected to a person's material self. They suggest for making the process go more smoothly, such as inquiring about preferences of others and telling stories associated with objects to create shared definition of objects’ significance to the giver and/or to family history. Disbandment is an acute episode of a more general, lifelong process of managing one's possessions. This study describes the activities older people undertake to reduce the volume of their possessions in the course of a residential move to smaller quarters, a process with practical cognitive, emotional and social dimensions. Qualitative interviews were conducted with members of 30 households who had moved in the previous year. The disbandment period, typically about 2 months, was a particular focus of the interview. The interviews suggested 9 reasons why people had accumulated and kept things, which now became problematic for the impending move. The initial steps of disbandment entailed decisions about major furniture and meaningful gifts to family and friends, followed by evaluation of the remaining belongings for retention, sale, further gifts, donation, or discard. Things not divested by one means were reassigned to another. People took pleasure in disposals that saw their things used, cared for, and valued as they had done, thus fulfilling a responsibility to their belongings. (RH)

Inter-generational family support provided by older people in Indonesia; by Elisabeth Schröder-Butterfill. Ageing and Society, vol 24, part 4, July 2004, pp 497-530.

Most social research on ageing in Asia has focused on the support provided by adult children to their parents, and thereby suggests that as a matter of course older people are in need of support. This paper offers a different perspective. Drawing on ethnographic and questionnaire data from a village in East Java, it examines the extent of older people's dependence on others, and highlights the material and practical contributions that they make to their families. It is shown that only a minority of older people are reliant on children or grandchildren for their daily survival. In the majority of cases, the net flow of inter-generational support is either downwards - from old to young - or balanced. Far from merely assisting with childcare and domestic tasks, older people are often the economic pillars of multi-generational families. Pension and agricultural incomes serve to secure the livelihoods of whole family networks, and the accumulated wealth of older parents is crucial for launching children into economic independence and underwriting their risks. Parental generosity does not generally elicit commensurate reciprocal support when it is needed, leaving many people vulnerable towards the end of their lives. (RH)
Intergenerational exchange patterns and their correlates in an aging Israeli cohort; by Howard Litwin.
Based on data from a national sample of people aged 60+ in Israel, this analysis examines intergenerational exchange among Jewish respondents with children. Data on financial and instrumental help given by children and received from them allowed identification of four exchange patterns: an equal extent of exchange between parents and children; an unbalanced rate of exchange in which parents received more from their children than they gave; an unbalanced rate of exchange in which parents gave more to their children than they received; and lack of any exchange. Multinomial logistic regression analysis underscored the association of different social and health correlates across different patterns of familial transfer. The findings also suggest the possibility that exchange patterns change across the life cycle, in accordance with the changing social and health status of family members engaged in exchange. (RH)

Negotiating family support?: the 'generational contract' between long-term care and inheritance; by Misa Izuhara.
Using qualitative interviews with 54 older people, this article explores the changing patterns of the generational contract in contemporary Britain and Japan. In particular, this article presents a cross-national comparison concerning the exchange of housing assets and long-term care between older parents and their adult children in the context of different laws, cultures, social policy and housing markets. The concepts of intergenerational solidarity, reciprocity and ambivalence were used to aid the analysis of the household data. The research found there were significant cross-national differences in areas such as autonomy and decision-making process regarding bequests, and choice of beneficiaries. In both societies, however, no strong link was found between bequest motives and family support for long-term care. The model of intergenerational solidarity (willingness to help children) thus appeared to override the reciprocal dimension of the generational contract. (KJ/RH)

Will retirement as we know it be postponed for a few years, or will retirement be reshaped to become less age-related and more fulfilling? The report on which this summary is based looks at the future of retirement policy in Britain over the next 20 years. It considers work in later life, and the future of the state pension and of lifetime savings. Two alternative scenarios of later life are offered: one in which retirement starts later than it does now; and another which is a mix of work and leisure in which retirement is no longer a distinct phase. The report is part of the Tomorrow Project launched in 1996 to support individuals and organisations in thinking and gaining new insights about the future. (RH)

By April 2005, all pension books were replaced with the Direct Payments system. This information sheet outlines the types of accounts into which pensions can be paid: a current account with a bank or building society; a basic or introductory account with a bank or building society; and a Post Office card account. (RH)

Providing for Thatcher's adults: [home ownership and self-funding of care]; by Kerry Stevens.
Community Care, no 1547, 4 November 2004, pp 38-39.
Margaret Thatcher's "home owning democracy" has allowed many older people to use the capital from their homes to fund their care. However, the relationship between private providers and the new generation of self-funders is raising awkward questions. This article considers the impact of greater home ownership on the ability
of older people to directly commission services to meet their needs. Managing the financial impact of this will require the state to redefine its relationship with the citizen. (RH)

Rethinking retirement; by Ros Altmann, Tomorrow Project.
The author responds to the Tomorrow Project's report, "The opportunity of a lifetime: reshaping retirement" (2003). Rather than postponing or reshaping retirement as the report advocates, her view is that the current concept of retirement needs to be abandoned altogether and change the way we think about organising people's lives. Although encouraging savings will help, this alone will not remove the risk of poverty and long-term economic decline. The author looks at pension policy, encouraging more private pension provision, and the concept of a Lifetime Savings Account. She notes the challenges for the future for the individual, the government, employers and financial service companies. (RH)
From: http://www.tomorrowproject.net

A number of possible solutions to the "pensions crisis" were discussed at this seminar. There was general acceptance that people must work longer before being eligible for the state pension (however that is defined), and people must save more to provide for their retirement. (RH)
From: Cityforum Ltd., Ringwell Lane, Norton St Philip, Bath BA2 7NZ.

This is a follow-up to the 2002 Green Paper, 'Simplicity, security, and choice: working and saving for retirement' (Cm 5677). It highlights the risk of pension and savings under-provision by many employees, self-employed people, women, people aged 50+, young people and ethnic minorities. It takes a three-tiered approach to encouraging people to plan for retirement by: making the most of pension provision; raising awareness and improving financial education; and giving people the right information, at the right time and in the right way. Reference is made to the forthcoming Pensions Bill in the 2003/04 session. (RH)

Persistency of contributions to savings or pension schemes may indicate whether or not consumers are building up savings for the long term. This paper uses two information sources to examine some of the key drivers of persistency. The first is the aggregated information on persistency rates collected from financial providers by the Personal Investment Authority (PIA), and then the Financial Services Authority (FSA). This analysis looks at whether there are significant differences in lapse rates across different durations, products and distribution channels. The second uses evidence of persistency of pension contributions in the British Household Panel Survey (BHPS), a large dataset collecting information on a large sample of (the same) individuals since 1991. The advantage of this sample is that it collects detailed socio-economic and demographic information at the point of sale and when people stop making contributions. (RH)

Research indicates that women remain less financially prepared for retirement than men. This research used data from the Ohio Poll (conducted by the University of Cincinnati's Institute for Policy Research) to assess gender
differences in the use of employer-sponsored and private retirement plans, and sought to account for this difference. Social status and human capital factors, occupation and industry of employment, and sense of financial self-efficacy were expected to account for gender differences. Findings indicated gender has no relationship with use of private retirement plans. However, women were found to be less likely to use an employer-sponsored plan, and this was largely accounted for by gender differences in occupation.

In most developed and developing countries, individuals are actively being encouraged to save towards their retirement by means of a plethora of savings mechanisms. In Malaysia, the reliance on individual savings through the Employees Provident Fund has costly implications for those in low paid, insecure employment, women, and those in the informal sector. Focusing on Malaysia, this paper seeks to present the pitfalls of such overt reliance on the provident fund mechanism, which allows easy access to savings, and diverts members' contributions to subsidiary accounts. The paper suggests paths of reform which would, at the very least, lessen the growing threat to Malaysians of poverty and social exclusion. (RH)

Consumers regard e-commerce as the riskiest form of shopping, and see redress as the largest obstacle to online purchasing. They therefore need easy access to databases on businesses that are reliable, and enable them to quickly and easily verify a trader's identity and credibility. They also need to know that the site is secure. This response from the National Consumer Council (NCC) is part of a wider series of responses to the Department of Trade and Industry (DTI) in its ongoing review of the Consumer Credit Act 1974, which aims to be in line with European Commission (EC) discussion on the draft Consumer Credit Directive. This response deals with each of the key consumer issues, which are the need for trust and confidence, redress, information and education. (RH)

The relationships between people's economic and social circumstances, their knowledge of pensions, attitudes to retirement planning, and saving behaviour is examined. The report is based on interviews with some 1,800 adults aged 18+ interviewed for the National Statistics Omnibus Survey in March 2002. It follows up questions similar to those in the previous report from the Department of Social Security (DSS), Pensions 2000. The present report explores the extent and nature of private pension provision among people of working age, and non-pensions savings and investments. It examines people's awareness, level of knowledge, sources of information on, and take-up of stakeholder pensions since they were introduced in April 2001. People's expectations of retirement - including the age at which they expect to retire - are considered in terms of the extent to which people have planned their retirement. A number of dimensions in attitudes towards pensions came to light in the research, and the sample population is segmented according to these attitudes. (RH)

The patterns of people's saving behaviour and pension provision are explored, in particular the impact of key life events such as getting married, changes in earnings, caring for disabled people, and windfalls. Thus, events can influence both the ability and the propensity to save. This report is based on secondary analysis of the savings questions in the British Household Panel Study (BHPS) for waves 1-10 (1991-2000/2001): whether individuals are saving, if so how much monthly; the reason or purpose for saving; and whether they have non-state (i.e. personal or occupational) pension arrangements. The report examines the main factors that relate to saving, and saving for retirement; patterns of saving over time; and whether there is an "asset effect" in saving. Conclusions and main findings consider those factors influencing the pattern of general saving and saving for retirement. (RH)

2002

There are major concerns about the future of pensions, and many individuals are confused about, and have little confidence in, the current schemes. In this submission to the House of Commons Work and and Pensions Committee, Age Concern England (ACE) suggests that this situation may be deterring people from saving, and points to gaps in our knowledge about pensions and savings. ACE's evidence also covers: the balance between state and private provision; occupational pensions; the state second pension (S2P) and stakeholder pensions; compulsory saving and non-pension provision; information and advice about pensions and savings; and active ageing, retirement and pension age. The needs of current older people should be recognised, and ways of avoiding the problems of low income and social exclusion must be considered in future policy. (RH)

About one in three long-term older residential and nursing home residents meet their own care costs, for which most will have sold their homes to raise the necessary capital. This report is based on a national survey of English and Welsh local authorities, case studies, and interviews with care home providers, self-funding residents and their relatives. It indicates the wide variation in local authority policies and practices, in particular, the use of strategies that discourage older people with assets over the upper capital limit (currently £18,500) from receiving a needs assessment on alternatives. The report describes conflicts between local authorities and independent sector care home providers; raises questions about the well-being of frail older residents in the current market situation; and questions the lack of impartial advice on alternatives to care home admission or on different types of care homes. The Nuffield Foundation funded this research project under a special grant making programme, "Older People and their Families". (RH)

It is often suggested that, in the future, older people will feel less desire to pass on their wealth to their children and more inclined to use it for personal enjoyment, to meet everyday needs of capital expenditures such as the costs of housing repairs, or to pay care costs. Currently older people appear reluctant to draw on their housing equity, which may be due to a desire to pass it on to their children. This exploratory study reviews the research evidence, and gathers available market research and other industry survey evidence. It presents preliminary analyses of existing national household surveys and other population data, and of attitudinal surveys which have readily usable data. Different methodological approaches that might be used in future studies are discussed. (RH)

The changing nature and patterns of the "generational contract" are explored, with particular reference to the exchange of nursing care and housing assets between older parents and their adult children. Inheritance practices and attitudes are used to examine the ways in which socio-economic, demographic and policy changes have recently altered the conventional arrangements in Japanese society. The previously defined generational contract is now ambiguous, and the expectations and obligations of different family members are fragmented. Also discussed, is whether such practices in Japan are unique and the ways in which they differ from the English situation. Family obligations and inheritance have been more explicitly connected in the Japanese social and legal systems, while in England there is neither legal obligation to support older parents, nor any constraint on inheritance. This article elucidates the similarities and differences in the patterns of inheritance, and thus the exchange models between care and inheritance in the two societies. (KJ/RH)

Financing the future: mind the gap!: the implications of an ageing population - key findings and proposed actions; by David Baker, Marcus Price (eds), Financial Services Authority - FSA. London: Financial Services Authority - FSA, 2002, 43 pp.

Following on from "The implications of an ageing population for the FSA", this report sets out the key findings and proposed actions arising from work on that theme. The focus is on areas of potential risk and opportunity for both providers and consumers of financial services. A number of key recommendations are made for stakeholders arising from issues connected with accumulating wealth (e.g. patterns of savings, barriers to saving), and with decumulation products, particularly issues arising from innovations in the annuities, income withdrawal and lifetime mortgage markets. The report also focuses on possible gaps in work, where the FSA's resources or interventions may be required to help ensure that consumers and financial services providers are preparing for an ageing population. (RH)

ISBN: 0117046787
Price: FOC

Recent research by the FSA shows that many people, especially younger consumers, have an over-optimistic view of how much they will have to live on in retirement. To address this and to help people understand the need to save for retirement, the FSA has produced a series of booklets and factsheets on retirement planning. This guide aims to help the individual who already has some retirement savings to review whether there is sufficient to obtain an income from a pension. (KJ/RH)

Price: FOC

Two waves of a US Social Security Beneficiary survey were analysed to consider differences in the retirement resources of women and men based on their marital status, race and ethnicity. Despite increased workforce participation, the economic situation of single women, including white women, worsened over time. A bifurcation in retirement resources was found: while men relied more on private income sources, women depended more on social security. Current retirement policies based on privatisation will continue to adversely impact women who work in low-paid jobs, receive lower wages, and live longer than men. (KJ/RH)

ISSN: 08952841
From: http://www.tandfonline.com

The material aspects of globalisation, and the effects of the movements of trade, capital and people around the world on older men and women, are discussed. While some people have benefited - most notably where...
pensions and health care are well developed - the majority of poor older people have not. Free trade, economic restructuring, the globalisation of financing, and the surge in migration, have tended to produce harmful consequences for older people in most parts of the world. These developments have been overseen, and sometimes dictated, by inter-governmental organisations (IGOs), such as the International Monetary Fund (IMF), the World Bank, and the World Trade Organisation (WTO), while other IGOs with less power have been limited to anti-ageist exhortation. Globalisation transfers resources from the poor to the rich within and between countries, increasing social problems, while simultaneously diminishing countries' freedom and capacity to make social policy. Nonetheless, the effects of globalisation - particularly its financial dimensions - on a nation's capacity to make social policy can be exaggerated. Political will can combat international economic orthodoxy, but the evident cases are the exception rather than the rule. (RH)

Impact of an ageing population for the FSA; by Financial Services Authority - FSA. London: Financial Services Authority, 2002, 35 pp (Consumer research 10).

As part of its work on the implications of an ageing population, the FSA commissioned qualitative research from NOP, to explore how consumers plan for their financial futures before retirement, at retirement, or in retirement. The focus is on consumers' experiences of, and attitudes towards, key financial decisions, products and advice. The results of this are in Section 3, which also covers lump sums, annuities, housing, equity release, and long-term care. This is complemented by quantitative research in Section 2, based on an analysis of data from NOP's Financial Research Survey. This section looks at trends in state and private pensions provision, and ownership of financial assets across different generations of consumers. Section 1 sets the scene, by highlighting key demographic trends contributing to an ageing population. (RH)

The influence of socio-economic and health differences on parents' provision of help to adult children: a British-United State comparison; by John C Henretta, Emily Grundy, Susan Harris.

Transfers of assistance from older to younger family members are an important, though often ignored, component of intergenerational exchanges. The ability to help younger family members - either financially or practically - may be influenced by the health and socio-economic status of older parents, but very little is known about these patterns. This article examines the effects of socio-economic and health status on the help that late mid-life parents in Britain and the United States give their children with money, domestic tasks, and grandchild care. Results for the different types of family support yield three main findings. First, there are relatively few differences between Britain and the USA in the factors affecting the provision of support. Secondly, socio-economic factors appear to be more important among married respondents, while health is more important among the unmarried. Thirdly, children's co-residence has greater effects on the provision of domestic task help in Britain than in the United States. (KJ/RH)

Many older people consider that the rapidly changing and complex world of finance leaves them marginalised, and can engender a sense of powerlessness. This report follows on from a NIACE briefing paper for the DfES, "Financial literacy and older people". It sets the context in relation to financial exclusion, and the need for better financial knowledge, understanding and skills, especially for older people. Their lower participation in learning is identified as a problem that needs to be tackled. The report looks at the relationships between those who provide financial services, and the role adult education has in improving "financial literacy". NIACE project and development work with partner agencies on curriculum materials is described. Examples of existing programmes and suggestions on ways of extending the curriculum to improve financial knowledge are outlined. The report makes recommendations that are aimed at government, education providers and other agencies. (RH)

The median income of black elders has fallen from 70% of that of their white counterparts in 1967 to 60% at the beginning of the 21st century. When gender is taken into account, disparities become greater: the poverty rate of black women aged 75+ is about ten times that of "young-old" white men (age 65-74). This briefing presents evidence of difficulties in retirement experienced by ethnic minority groups in the US. (RH)

Existing microeconomic evidence is assembled, and the economic arguments are set out relating to the current debate on the ageing population, the timing of retirement, and the adequacy of financial provision for retirement in the UK. Empirical evidence is presented on: life expectancy and demographics; early retirement trends and the labour market; the role of the benefit system in the UK; pension arrangements of the working-age population in the UK; saving; and international issues. The conclusions include the suggestion that, by extending working lives and therefore being in retirement for less time, individuals would have more time to accumulate savings (both pension and non-pension) and would also need less savings. (RH)

Saving ourselves: gender issues in making provision for one's own retirement; by Susan Gee, Sik Hung Ng, Ann Weatherall (et al).
Gender differences in making provision for retirement and the factors associated with a lower likelihood of saving are investigated in a survey of 382 non-retired adults aged between 40 and 62.5 years in the Greater Wellington region of New Zealand. Overall, women were less likely to save for their own retirement than were men. However, this gender difference was no longer significant when income was taken into account. Those less likely to be making provision for their own retirement included individuals with poor health and lower incomes, and women who had divorced or provided care. The relative economic position and social roles of women may engender vulnerability to economic dependence in later life. (RH)

Self-funding residential care; by Margaret Richards.
A new study sponsored by the Nuffield Foundation, "Asset stripping: local authorities and older home owners paying for a care home place" (Policy Press, 2002), explores the experiences of older people who self-fund their residential or nursing care. This article outlines the scope of the research and key findings on: ceilings to care packages; the lack of needs assessment, impartial information or advice; inappropriate admissions; variation in contracts for privately funded residents; and disregarding the value of properties occupied by carers, such that self-funding residents are effectively subsidising local authority contract prices. (RH)

Special report : Is there a pensions crisis?; by David Miles.
Prospect, December 2002, pp 46-50.
Longer retirements, falling markets and closing company schemes: there is a pension problem, but not a crisis. Private saving will have to fill some of the gap. However, by steering more to poor pensioners, the government may reduce incentives to save. The author outlines the present situation as regards pensions and savings, which he concludes is a crisis of inequality, and not of ageing. (OFFPRINT). (RH)
ISSN: 13595024

Between 1986 and 1997, the average wealth of older Australians almost doubled from $106,000 to $204,000. This was in sharp contrast to the fall in the average wealth holdings of Australians aged under 45 for the same period. The average picture for older Australians masked major differences among them, as the top 25% recorded the highest increase in both their income and their wealth. The growing differences in the resources
available to older Australians raises many questions for policy makers as they grapple with the issues associated with population ageing and how to finance the future health and care needs of the ageing baby boomers. (RH)

IPPR's project on "A new contract for retirement", of which this research is a part, aims to look at both pensions and long-term care policy, to set out a sustainable policy settlement. For this report, primary qualitative research was conducted to understand public attitudes on three issues linked to public policy in retirement: means-testing in relation to pensions and long-term care; giving or receiving an inheritance; and expectations about caring for others in old age. The research sought the views of three different generations: over 75s, ages 50-65, and ages 30-45. (RH)

Taking risks in investing in the equity market: racial and ethnic differences; by Martha N Ozawa, Yat-Sang Lum.
Some policy-makers and policy analysts have proposed that Social Security in the US should be privatised to enable participants to achieve higher returns through investment in the stock market. How well individual retirees would fare financially under a privatised system largely depends on their decision to invest in the equity market, rather than in other means of investment. For that reason, it is important to investigate the degree to which ethnic minorities are currently investing in the market. This article presents the findings of a study comparing the investment behaviour of black and Hispanic people aged 51 to 61 with the investment behaviour of their white counterparts. Blacks and Hispanics are less likely to invest in the equity market than whites, and tend to invest smaller percentages of their assets in the equity market. (RH)

Use of housing wealth by older Australians; by Diana J Beal.
Australians have long skewed their investment portfolios towards personal housing, that the rate of owner occupation is one of the highest in the world. Some 85% of over 65s in Australia own their own houses, and the wealth represented by housing constitutes 50% of assets held by the household sector. However, housing wealth is not generally being realised to fund more comfortable retirements. This paper reports a preliminary study - based on a random sample of Australians from two electorates - into current community attitudes towards using housing wealth more "wisely" in retirement. About half of the surveyed home-owners indicated that they would be willing to use their housing wealth to fund more comfortable retirements. Only a small proportion - predominantly the 65-74 age group - reported a desire to leave their homes as legacies to their children. Community attitudes and government policy in the past have mitigated against the use of housing wealth to fund more comfortable retirements. However, community attitudes appear to be changing slowly. Governments, too, are starting to amend inconsistent policy and to remove impediments. (RH)

ISSN: 07264240

Data from the US Survey of Income and Program Participants (SIPP) are used to investigate the amount and composition of wealth held by four different groups: always married women, about-to-be widowed women, recent widows, and long-standing widows. Regression analyses assess the impact of group membership on wealth holding, controlling for other socio-demographic factors, and annuity calculations assess the potential for wealth to augment income. About-to-be-widowed women have fewer assets than intact couples, and there is a further decline in assets at the time of husbands' deaths and in the ensuing period. Estimates of the annuity value of widows' wealth show that its liquidation would do little to improve the economic situation of the poorest widows. These findings confirm what is known about income changes that surround the death of a spouse. More research is needed on the relationship between wealth holdings and mortality, as well as the roles that health care costs, life insurance and bequests may play in altering widows' wealth. (RH)

Capital offences: variations in local authority treatment of older home owners entering residential care: a summary of some key research findings; by Fay Wright, Age Concern Institute of Gerontology - ACIOG, King's College London; Nuffield Foundation. London: Age Concern Institute of Gerontology, ACIOG, 2000, 10 pp.

A small proportion of residents in nursing homes in Great Britain (some 8.4%) are not means-tested, and have their fees met by the NHS; but a majority are. Unless there is a decline in the proportion of older people entering care homes, the issue of using one's home to meet care home charges will continue to be of concern for older people and their relatives. The research on which this publication is based was funded as part of the Nuffield Foundation's Older People and Their Families programme. Findings are based on postal and telephone surveys of finance officers with social services departments (SSDs) in England and Wales. The main findings concern: variations in local authority community care packages; local variations in assessing financial situations; older home owners failing to obtain needs assessments; variations in obtaining a local authority contract; problems with entering a care home without a local authority contract; local variations in the treatment of a carer remaining at home; a strained relationship between local authorities and independent sector providers; and a lack of impartial advice for frail older home owners. Providing information in a 'grey area': advising on the transfer assets; by Nicholas Parry, Alan Parkin, Greta Bradley. Education and Ageing, vol 15, no 2, 2000, pp 211-224.

The role of professionals is considered regarding advice to older clients on the consequences of a transfer of assets made in anticipation of entering residential care. Particular consideration is given to the legal framework: circumstances may exist which have consequences for the older client beyond the purely legal ones. Legal practitioners need to be aware of and sensitive to such wider and emotional and personal issues; their professional education and training may not have adequately equipped them for this. There may also be issues which raise ethical dilemmas for social work practitioners in this context, particularly as regards reconciling
potential conflicts of duty to their employing authority and to the older client, for which education and training may not have prepared them. (RH)

Tracking the majority: households, older workers, and retirement during the great depression; by Jon R Moen, Brian Gratton. The Journals of Gerontology Series B: Psychological Sciences and Social Sciences, vol 55B, no 1, January 2000, pp S28-S32.
Well into the 20th century, older people relied on traditional means of support, such as children's financial contributions or continued labour force activity. After the institution of Social Security in the late 1930s, retirement - permanent withdrawal from the labour force with financial arrangements for support - became an expected part of the life cycle of men 65 years and older in the United States. This study explored the extent of retirement and methods to finance it in the period just before Social Security became available, using the 1935-1936 Study of Consumer Purchases (SCP). Findings revealed that retirement in the modern sense appeared before state provision of support for older persons. Data indicate a considerable reliance on pensions and investment income despite Depression conditions. These findings constitute evidence for an independent, non-family-based retirement before governmental assistance through Social Security. (AKM)

Using data from the US Health and Retirement Survey (HRS) 1992, the authors examine how middle-aged couples allocate household financial resources among competing claims from their ageing parents and offspring, and emphasising racial or ethnic differences in these behaviours. Transfer patterns are sensitive to parental health and wealth, to children being young or in school, as well as the donors' health and wealth. Controlling for these and other factors, including family size and structure, blacks and whites are the most likely, and Hispanics the least likely, to financially help their parents compared to assisting offspring. Black couples are the most likely to sacrifice their own consumption to assist parents financially. (RH)

Using data on the levels of housing wealth, housing expenditure and financial resources of today's older homeowners, this study analyses the financial benefits and burdens of owner occupation in later life. Two key questions are asked. First, what are the current housing costs of older owner-occupiers, and how do these compare with older people living in other forms of tenure? Second, can owner occupation provide a usable capital asset, as well as meeting housing needs in later life? More specifically, can housing wealth be used to reduce poverty in old age? The researchers highlight how Housing Benefit (HB) reduces the cost of renting,
compared with owning for low-income older people. They analyse the potential for housing wealth to alleviate poverty in later life through equity release, and explore housing as a form of saving in old age. They conclude that owning one's home in later life is not a financial panacea. This study is a companion volume to "To have and to hold: the bond between older people and the homes they own" by Janet Askham et al. (RH)

The gradual shift in responsibility for welfare provision, from the government to individuals, is making household saving a key policy concern. Yet, little is known about how much households save or the forms in which they save. This report reviews the economics of household saving, the taxation of financial assets in the UK and official sources of information on saving and wealth. It also gives information on trends in asset holding in the household population over the period 1978-1996, and a detailed description of asset and wealth holdings in 1997-1998. (AKM)

New European standards on the man-machine interface for card systems; by John Gill, Scientific Research Unit, Royal National Institute for the Blind - RNIB; PhoneAbility; COST 219bis. London: RNIB, 1999, 4 page pamphlet.
Card operated systems, such as pre-payment for gas or electricity, public telephones and so on, continue to be part of our daily lives. In order to ensure that they are easy to use and consistent in design, new standards are being introduced by a working group within the European standards organisation, CEN (Comité Européen de Normalisation). Existing standards (EN 1332-1 to EN 1332-4) cover general design principles, card orientation, keypads and coding of user requirements. However, two standards are in preparation and these cover provisions for physical accessibility to card reading terminals, and tactile differentiation of cards. (KJ/RH)

In 1997, Chase Manhattan Bank jointly held a conference with Age Concern England (ACE) to determine how the financial services industry could contribute to the Millennium Debate of the Age (MDA). The conference agreed to set up a working group (the Gleneagles Group) of industry experts to write a report for MDA. This report identifies ways in which the private sector and the State can work together to meet the needs of older people in the 21st century, for both income and long-term care costs. Comments are within the context of Government proposals to introduce Stakeholder Pensions, and also concern the report of the Royal Commission on Long Term Care. Recommendations are made that the Government should encourage more voluntary pensions provision, and that self-employed people should be able to buy into the Second State Pension with the option of contracting-out into private pensions and long-term care insurance. (RH)

To have and to hold: the bond between older people and the homes they own; by Janet Askham, Helen Nelson, Anthea Tinker (et al), Joseph Rowntree Foundation - JRF. York: YPS, for the Joseph Rowntree Foundation, 1999, 57 pp.

Although surveys show that most older people prefer to own rather than rent their homes, this study indicates that their views are complicated. This report includes the major findings of a study examining the way in which people distinguish between the burdens and benefits of home ownership. Three main themes are identified: independence, finance, and sense of identity. The effects of divorce and widowhood are recognised as important factors affecting people's attitudes to home ownership, along with disability and illness. Seven areas of policy are discussed in the light of research findings, and these concern: helping people to acquire homes; financing of home purchase; helping people to maintain, repair and improve their homes; helping people to move home or stay where they are; income in later life; care in old age; and the home as legacy or inheritance. The authors conclude that there is a need for more focused financial and practical advice and support. This study is a companion volume to "Home ownership in later life" by Ruth Hancock et al. (RH)
1998

An analytical study of methods to protect assets from long-term care costs; by Lynn Walker. EAGLE Supplement, issue one, 1998, pp 4-8. This is the first in a series of three articles discussing the pros and cons of various methods of protecting assets in paying for long-term residential or nursing home care costs. The author outlines legislation, the means testing of assets, and how couples' assets are assessed. Attempts at `deliberate deprivation' of assets for the purposes of avoiding home care costs are unlikely to succeed: the individual will be treated as still owning the asset, and a notional value will be added to the assessment. Local authorities' powers as regards charges for sale of property, and in the event of a resident's bankruptcy in recovering debt are also covered. (RH)

Contrasting legal conceptions of family obligation and financial reciprocity in the support of older people: France and England; by Julia Twigg, Alain Grand. Ageing and Society, vol 18, part 2, March 1998, pp 131-146. The different ways family obligations and reciprocity are defined in law in France and England are explored in this paper. Focusing on the areas of inheritance and financial support in relation to older people, the paper explores how these are contrasted and linked in the two societies. In France, families are legally obliged to support their kin through 'obligation alimentaire', but inheritance is secured by law within the family. In England by contrast there is no such legal obligation to support older relatives; nor is there any constraint on inheritance: testamentary freedom is the legal principle. The authors discuss the significance of these differences and assess how far they are modified by the operation of the welfare state and by embedded assumptions about family relations, within the context of different discourses of law and social policy in the two countries. (AKM)

Financial planning for retirement: an imperative for baby boomer women; by J Conrad Glass, Beverly B Kilpatrick. Educational Gerontology, vol 24, no 6, September 1998, pp 595-617. The baby boomer generation is quickly moving to the time of retirement. Signs point to the need for baby boomers to assume more responsibility for their financial security in retirement. In general, older women today do not have the financial resources that men do, and are poorer in retirement. Conditions seem to be pointing to the fact that boomer women are moving in that direction as well. However, women seem to prepare less for retirement. This article looks at some of the reasons for women's lack of planning and saving for financial security in retirement. Economic and psychosocial reasons that contribute to this lack of preparation are examined, and some recommendations for change are suggested. (RH)

ISSN: 03601277

The Financial Services Authority: a consumer view on the scope and objectives of the new financial services regulator; by National Consumer Council - NCC. London: National Consumer Council, April 1998, 30 pp. This report comments on the scope and objectives of the proposed Financial Services Authority, whose responsibilities will encompass conduct of business and prudential supervision in all areas of financial services. The report argues that the scope of the new watchdog is too limited and inflexible to be of any real help in areas that cause the most serious problems for consumers. It points to the shortcomings of the current systems of self-regulation for mortgages, general insurance and intermediaries, and calls for the new authority to take on additional regulatory responsibilities. (AKM)

Gender comparisons of baby boomers and financial preparation for retirement; by J Conrad Glass, Beverly B Kilpatrick. Educational Gerontology, vol 24, no 8, December 1998, pp 719-746. This study compared men and women, focusing on three middle-year age groups incorporating the baby boomers, in relation to the level of savings for retirement and the number of savings vehicles utilised. The research tapped into a study conducted by the National Center for Women and Retirement Research, and responses were received from 872 women and 415 men. Multiple linear regression identified certain personal characteristics, economics, and psychosocial factors, attitudes and investing methods that appeared to be related
to the level of savings for retirement. Certain personal characteristics, economics, and psychosocial factors were identified for the investments used. The identified factors were used for both genders. The males best fit the savings and investment profiles. Neither gender was saving adequately for retirement or taking full advantage of portfolio diversification, with women the lowest. Recommendations are made for educators, financial institutions, employers, and policy makers. (AKM)

Housing wealth, income and financial wealth of older people in Britain; by Ruth Hancock. Ageing and Society, vol 18, part 1, January 1998, pp 5-33.

This paper explores the housing wealth of older people in Britain in relation to their incomes and financial wealth. Family Expenditure Survey data for 1992/3 to 1993/4 are used to assess the extent to which housing wealth could alleviate income poverty in older age. A range of poverty and housing wealth thresholds are used. Although housing wealth increases with both income and financial wealth, the analysis suggests that there are non-negligible proportions of low income older people who could generate small supplements to their incomes by converting the wealth tied up in their homes into an income stream, but in few cases would this be sufficient to pay for long-term residential care for any length of time.

This paper is the National Consumer Council (NCC) response to the Treasury's consultation paper, `Making savings easy', on standards for the financial products that will form part of the ISAs (Individual Savings Accounts). CAT standards are supposedly designed to indicate a product has: C: reasonable charges; A: easy access; and T: fair terms, which do not cause unpleasant surprises. NCC expresses concerns that ISAs and CAT standards will not help lower income consumers to save. It suggests alternative ways such as pump priming new credit unions, and revamping National Savings products for small savers. (RH)

There have been many proposals for systems to reduce consumer reliance on cash and cheques, especially for low value purchases (under £25). Smart card technology now offers a secure mechanism at an affordable price, ready to be used for electronic purses, which store pre-paid monetary value directly on the smart card. There is, however, concern that insufficient thought is being given to the difficulties disabled consumers will have in using these systems. Legislation in various countries may require that electronic purses are usable by people with disabilities. It would be very costly to change designs and systems once they are in use, so it is important to consider the needs of people with disabilities at the outset. This report gives examples of the uses for electronic purses, and recommends design features to make them usable for people with disabilities. It also includes information on the main providers of electronic purses (including web site addresses). (RH)

Now that the Disability Discrimination Act (DDA) has come into force, service providers need to be aware of what constitutes reasonable expectations on the part of consumers, regardless of disability. In this report, telephone interviews, questionnaires and focus groups were used to gather the views of blind and partially sighted people on current provision. In-depth findings are presented on some of the commonest types of services used by visually impaired people: health services, retailing, transport, financial services, and utilities. Covered in less depth are services of: arts, entertainment and religious venues; hotels, catering and tourism; sport and leisure; and education and employment. A number of common themes on accessibility of services emerged: staff assistance and awareness; access to information; mobility; technology; identifying and purchasing items; physical access; and health and safety. Advice to service providers centres round two key points: planning ahead; and responding to the needs of the individual. (RH)
Provides an overview of the tax system, and outlines the various savings and investment options available, how to get financial advice and what safeguards are available to protect investments.

This chapter reviews provision for retirement as it affects the baby boom generations, examines the working lives of baby boomers and how these are likely to affect their financial resources in retirement, and looks at the effects of more widespread home ownership. An examination of recent trends in the incomes of today's pensioners - sources of income, and provision of long-term care - points to why there should be concern for what happens to the baby boomer generations in old age.
How to finance your retirement: over 100 powerful strategies to increase your retirement income; by Tony Granger. London: Century Business, 1997, 231 pp. This book concerns the financial aspects of retirement planning. It concentrates on the money mechanics of retirement, ranging from proper pension funding and investments, to the financial implications of retirement. The financial aspects of long-term care and estate planning are also dealt with. (RH)

The first code of banking practice came into effect in 1992, and this report outlines its development. It concludes that the code is not working, and local bank branches need more guidance and training to meet its provisions, if they are to deal sympathetically and positively with people in financial difficulty. Banks have a conflict of interest in their roles of creditor and service provider, often to the detriment of customers. The report examines banks' debt and money advice, considers their business practices, and the ways in which information technology, closures of local branches and the end of personal banking have contributed to increased indebtedness. The policies of 20 banks as regards bouncing cheques, arrears, and advice and information provision are examined. These findings are contrasted with CAB (citizens' advice bureaux) advisers' and clients' experiences. The report makes recommendations designed to help banks meet the provisions in the 1997 code of practice, which are directed at the government, the British Bankers' Association, the banks themselves, and the Independent Review Body. Financial exploitation of older people is one type of elder abuse. This article describes the work of the Massachusetts Bank Reporting Project, which was set up to prevent financial exploitation of older people through educating bank employees and customers; increasing voluntary cooperation among the financial industry, elder protective services and law enforcement; and encouraging the banking industry to develop and promote methods of protecting customers and their assets. During the first six months 57 reports of financial exploitation were made by bank staff statewide compared to 10 reports received in the previous twelve months. The article concludes that the project can be replicated by other states.

Despite tax inducements, Britons still are not saving for their old age. Soon they will have to be coerced, unless they can first be educated.
ISSN: 13647431

Despite great overall improvement in older people's economic status over the past 2 decades, older people from ethnic minority groups still comprise the poorest population group of all. Using data from the 1971, 1981, and
1991 Current Population Survey (USA), this study examined whether the racial difference in income status of older people has been decreasing or increasing over the past twenty years, and the extent to which social security and supplementary security income - as opposed to private pensions, income from assets and earnings - have contributed to alleviating poverty among white, black and Hispanic older people. Findings revealed that racial and ethnic differences in income status increased between 1970 and 1990, and that social security is the most important income source. Policies which would help to improve the income status of low-income older people are discussed.

This report examines how well the financial services market provides saving and investment products for those on low or irregular incomes - the choices available, their suitability and value for money. It also discusses how competition in the financial services market, the tax and benefit rules, and the regulation of financial services affect accessibility and value for money. Consumer access and choice are affected by bank, building society and local post office closures, and the low returns from small savings. The report concludes with a number of priority recommendations addressed to the financial services industry, their regulatory bodies and to government, which would give a better deal to those who wish to put by small sums of money and to see their savings grow.

Selection of children to provide care: the effect of earlier parental transfers; by John C Henretta, Martha S Hill, Wei Li (et al).
The authors use the first wave of data from the Asset and Health Dynamics Among the Oldest Old (AHEAD) study to examine the effects of past parent-to-child financial transfer on selection of a child to provide assistance with basic personal care for unmarried parents. It was estimated a fixed-effects conditional logit model and found a positive and significant association between past financial transfers and a child's current helping behaviour. The coefficient of past financial transfers is in the direction hypothesised, and its magnitude is 80% as large as that of gender, a well-documented powerful predictor of parental caregiving. There appears to be substantial evidence that earlier parent-to-child financial gifts play a role in determining which child in the family will provide assistance. (KJ/RH)

Six-year longitudinal study of finances of elderly wards under guardianship; by George H Zimny, Judith A Diamond, Marlene M Mau (et al).
Courts are responsible for protecting the financial assets of wards (persons adjudicated as personally and financially incapacitated), but little is known about the gain and losses of assets over time or about how long wards live. To help identify the nature and extent of the courts' responsibility, the finances of 73 older wards in Missouri were studied over a 6-year period using the annual financial accounts in public court records. The wards began guardianship with over 13 million dollars in assets, ranging from 0 to 1.5 million dollars. After 3 years, 33 wards were alive, and after 6 years, 18 were alive. Over the 6-year period, guardians for 12 wards handled 1.8 million dollars in receipt and 1.9 million dollars in reimbursements. The findings underscore the necessity for state legislatures, courts and judges to take actions to protect the assets of older wards over time.

Evidence indicates that many households in the UK have little or no savings, hence the reason for introducing the individual savings account (ISA) as a way of encouraging saving. This Commentary examines the reasons why a government might want or need to reform taxation on savings; past experiences with tax incentives such as tax exempt special savings accounts (TESSAs); and the design and implementation of ISAs. Transfer behavior within the family: results from the asset and health dynamics study; by Kathleen McGarry, Robert F Schoeni.
When people fall on hard times, can they rely on their family for financial support? In view of proposed reductions in public assistance programmes in the US, it is important to understand the mechanisms through which families provide support for their members. In this article, the authors provide evidence that intra-family transfers are compensatory, directed disproportionately to less well-off members. In a given year, adult children in the lowest income category are 50% more likely to receive a financial transfer from their parents, and on average they receive over $300 more than their siblings who are in the highest income category. The dataset used in the new Asset and Health Dynamics (AHEAD) study contains information on all children in the family. It is therefore not possible to estimate models which control for unobserved differences across families. Results are robust to these specifications. In addition, no evidence is found that parents provide financial assistance to their children in exchange for caregiving. (RH)

This volume consists of papers presented at a conference held at Carefree, Arizona, in May 1993, as part of the National Bureau of Economic Research's ongoing Project on the Economics of Aging. Papers deal with labour market behaviour concerning older workers, health care, housing and living arrangements, and saving and wealth. Two models of older people's behaviour - 'Elderly health, housing and mobility', and 'Intergenerational transfers, ageing and uncertainty' - are considered.

Aggregating poor and near-poor elderly under different resource definitions; by Michael S Rendall.
This study investigates how accounting for assets and non-cash transfers as well as cash income for current consumption affects the measurement of poverty. It uses the Foster, Greer, Thorbecke (FGT) poverty index to analyse the prevalence and intensity of poverty among older people, as estimated in the 1984 Survey of Income and Program Participation data. Adding the annuity value of assets removes many older people from the ranks of the poor and near-poor, while adding non-cash transfers moves many older people from poverty into near-poverty. Their combined effect reinforces a high-prevalence, low-intensity characterisation of poverty. Large total poverty reduction effects are missed by income-only resource definition, and large poverty-intensity reduction effects are missed by prevalence-only aggregation.

Caring for the elderly; by Keith Owen.
Whilst solicitors have been receiving fewer enquiries from clients on giving their house to their children, there have been enquiries as to how to stop local authorities gaining possession of housing to pay for retirement or
nursing home fees. This article examines the cause of the problem, the cost to the individual and how to go about solving the problem.

ISSN: 1360239X

Sets out Age Concern England's concern over what may happen in the future if growing numbers of older people transfer their assets, and then need some form of long-term care. Includes recommendations to the Government regarding the role of the state and the individual in paying for care.

ISSN: 1360239X

With the soaring of land and stock prices in the Japanese economy, inheritance has come to play an increasingly important role. The distribution of inheritable assets among family members affects the living conditions of older people and the asset formation of both older and younger people. Detailed investigation into how the assets of the parents are distributed is a major theme in the study of the patterns of saving and the supply of labour for the care of older people. In this study, an empirical analysis using survey data, was conducted based on the selfish, exchange-oriented bequest motive model, which assumes that the bequest is made by parents to children in return for their support of, or living together with, the parents. A positive relationship is confirmed between the parent-child cohabitation or support of the parents and the amount of a bequest. It is also confirmed that this relationship varies according to the gender of the heir, the living conditions of parents and the history of asset formation. The study concluded that the reform of the inheritance law to reduce the legal portion of inheritable assets distributed to each child will have political implications, as it will improve the welfare of older people. When a person with a disability needs to use a cash dispenser, he or she may meet a number of difficulties. Some of these difficulties relate to finding the terminal or physically getting there, but many of the problems related to the user interface on the cash dispenser. A few years ago, a number of organisations realised that `smart cards' could potentially alleviate many of the problems concerning the user interfaces of self-service machines such as cash dispensers. As a result, the Saturn project was established with the support of the European Communities (EC). The author outlines the results of a field trial of a modified cash dispenser installed at the RNIB (Royal National Institute for the Blind) Resource Centre. (RH)

Paying for nursing home or residential care (deprivation of assets); by Philip Spiers.
Discusses the subject of older people giving away their assets in order to obtain local authority funding for long-term residential care accommodation and care costs, and summarises local authority charging procedures relating to deprivation of assets.
ISSN: 1360239X

Explains the rules which enable a local authority to seize a persons assets, including their house, to pay for long-term residential care, and gives legal advice on how to prevent this.
SES differentials in health by age and alternative indicators of SES; by Stephanie Robert, James S House.

Despite the general persistence of strong socioeconomic status (SES) differentials in health in the United States (US), research suggests that such differentials may diminish or become non-existent at older ages. This study investigated how SES differentials in health vary by age in the US, using detailed age categories (from 25 to 85 and over) and two alternative indicators (home ownership and liquid assets) of a major additional dimension of SES, financial assets, which may be especially important at older ages. Findings revealed that financial assets, especially liquid assets, considered both alone and adjusted for education, were associated with health throughout adulthood until age 85 and over. Furthermore, financial assets remained associated with health until quite late in life and became more important relative to education and income at older ages for some measures of health.

Developing a daily money management service model: navigating the uncharted waters of liability and viability; by Kathleen H Wilber, Leah M Buturain.
The Gerontologist, vol 33, no 5, October 1993, pp 687-691.
This article discusses the development and implementation of a Daily Money Management (DMM) Service within a mature health and social service agency. Although there is increasing recognition of the need for DMM programs, major obstacles to their development include problems of securing adequate financial support and concerns about the liability risks inherent in providing financial services. This article describes an innovative DMM service model developed at Senior Health and Peer Counseling in Santa Monica, California, that has serviced more than 100 elders during its first two years of operation. The article explores the mission, key components and organization of the service model, including the development of a multidisciplinary Technical Advisory Group and a professionally supervised volunteer staff, the service planning and care coordination issues, the risk management protocols, and the need for multiple sources of financial support. (RH)
Financial resources of older people and paying for care in later life; by Ian Gibbs, Joseph Rowntree Foundation - JRF.
Examines the inability of many older home owners to pay for residential and domiciliary care.
ISSN: 09583815

Two year results of a randomized controlled trial of a health promotion program in a retiree population: the Bank of America study; by James F Fries, Daniel A Bloch, Harry Harrington (et al).
American Journal of Medicine, vol 94, May 1993, pp 455-462.
Health promotion programmes for adult and older populations have the potential both to improve health, and to decrease the costs of medical care. This study describes a successful experience with a health promotion programme for Bank of America retirees over a 24-month period, documented by a randomised controlled trial. Participation rates of 47% were achieved for those completing the 24-month trial. Overall, health risk scores improved by approximately 20%; and cost savings were approximately 20% over the initial 12 months by patient report and 10% by claims experience. Individual health habit changes were favourable in all parameters, with an average improvement of approximately 25% from baseline values. However, the following caveats should be noted in assessing these results: the use of self-report questionnaires and possible consequent bias; the accuracy of cost data analysis; and the fact that some characteristics of the intervention may not necessarily be determined from this study. (RH)
